

The Privileged Appliance and Modules (TPAM) 2.5.919

Required Installation Instructions

!!IMPORTANT! WE RECOMMEND PUTTING THE APPLIANCE IN MAINTENANCE MODE AND REBOOTING BEFORE AND AFTER THE PATCH HAS APPLIED.

!!IMPORTANT! WE RECOMMEND REBOOTING ANY REPLICA AFTER CONFIRMING IT IS UPGRADED.

This patch will update a TPAM 2.5.904 through 2.5.918 appliance to the latest released version of 2.5.919. The minimum version in order to apply the patch is 2.5.904.

Warning: Since this patch can take several minutes to apply, the failover interval needs to be increased for any failover replicas to prevent them from failing over and not getting upgraded.

Key: LzVob4fQhN

Option: /genkey

NOTE: If using TPAM API's a new version of the API must be downloaded and the applications using them updated. When using the APIs or CLI, it is possible the syntax of the commands, parameters and output changes between TPAM versions. Refer to the TPAM 2.5 Administration Guide under chapters "CLI Commands" and "Application Programming Interface (API)" for more information

Please refer to the 2.5.919 release notes located [here](#) for additional information and installation instructions.
