Overview of Tools

InTrust comes with a set of scripts and utilities that serve a variety of purposes. Using these tools, you can do the following:

- Automate InTrust installation by performing it in unattended mode.
The tools for InTrust installation are described in the [Deployment Guide](#).
- Provide the permissions and database tables required for InTrust installation and reporting.
The tools for database configuration are described in the [Deployment Guide](#).
- Manipulate repositories and their contents flexibly. For details about repository-related tools, see [Understanding InTrust Repositories](#) and [Repository Indexing for Advanced Search Capabilities](#).
- Clean up temporary database tables.
See [Cleanup of Temporary Tables](#).
- Customize the severity of real-time alerts.
See [Alert Severity Customization](#).
- Change the InTrust server account.
See [Changing the Account Used by InTrust Services](#).
- Cleanly remove the InTrust Server component from a computer.
See [Removing Unneeded InTrust Servers](#).
- Customize various operational parameters in InTrust.
See [Organization Parameter Editor](#).

Cleanup of Temporary Tables

DBCleaner.exe Utility

Some reports may create temporary tables (which have prefixes such as **T_QCWP_TEMP_**, **TEMP_MACRO_** and **TEMP_**) in the data sources they work with. To avoid excessive database size growth, you can periodically remove temporary tables using the DBCleaner.exe command-line utility. This tool is located in the **InTrust\Tools\Database CleanUp** folder of your InTrust distribution.

When running the **DBCleaner.exe** utility, specify the following parameters:

1. Parameter to select tables by. Specify at least one of the following:
 - Table name prefix
 - Table owner

Also, you can use the `/from` and `/to` parameters to delete tables created in the specified time interval. The date format is YYYY-MM-DD hh:mm:ss.

2. Connection string. It must be typed in the following format and should be enclosed in double quotation marks:

```
"Provider=provider;Data Source=datasource;Initial Catalog=database;UID=username;PWD=password;"
```

-OR-

```
"Provider=provider;Data Source=datasource;Initial Catalog=database;Integrated Security='SSPI'"
```

where:

- Provider—OLEDB provider (for Microsoft SQL Server, it is "SQLOLEDB")
- Data Source—server name
- Initial Catalog—database name
- UID—user login name
- PWD—user password
- Integrated Security—specify this parameter if Windows authentication is in use

The format of the command line to run the utility should be like the following:

```
DBCleaner[.exe] /p[refix]:PREFIX /u[ser]:TABLE_OWNER [/from:DATE_FROM] [/to:DATE_TO] /c[onnection string]:CONNECTION_STRING
```

For example:

```
DBCleaner.exe /p:TEMP_ /u:DBO /from:2007-12-31 /to:2008-01-31 /c:"provider=SQLOLEDB; data source=DBServer; initial catalog=DBName; UID=UserName; PWD=test"
```

! **CAUTION:** Be careful when specifying the prefix. If no prefix is specified or the prefix is specified incorrectly, necessary tables can be deleted.

SQL Scripts

The **TempCleaner_2000.sql** and **TempCleaner_2005.sql** scripts are located in the same folder as the **DBCleaner.exe** command-line utility and have the same functionality.

To customize the parameters, edit them directly in the script code before running the scripts.

Alert Severity Customization

The **ITCustomAlertSeverity** utility allows you to define custom severity level for InTrust real-time alerts.

It is located in **<installation_folder>\Server\ADC\SupportTools\Win32**.

Below are the examples of command line syntax that should be used when running the utility:

```
ITCustomAlertSeverity -add <name> <severity_value> <color> <icon_file>
```

```
ITCustomAlertSeverity -remove <name>
```

```
ITCustomAlertSeverity -list
```

```
ITCustomAlertSeverity -export-icon <name> <icon_file>
```

The options are as follows:

Option	Description
-ADD	Adds a custom alert severity level to the configuration; the following arguments must be specified: <ul style="list-style-type: none">• NAME—Display name of the severity level• SEVERITY_VALUE— Decimal, hexadecimal or octal number that stands for the severity level• COLOR—Decimal, hexadecimal or octal number that sets the RGB color to mark the alert record that appears in Monitoring Console• ICON_FILE—Name of the alert icon file; 16x16 GIF image is the recommended format (BMP, JPG and ICO also supported)
-REMOVE	Removes the severity level (not the alerts!) specified by the <name> argument from configuration.
-LIST	List all currently defined severity levels.
-EXPORT-ICON	Export the icon associated with a severity level to an image file; the following arguments must be specified: <ul style="list-style-type: none">• NAME—Display name of the severity level• ICON_FILE—Name of the alert icon file

Changing the Account Used by InTrust Services

Use the **adcsrvacc** command-line utility to change the account of the Quest InTrust Server and Quest InTrust Real-Time Monitoring Server services. The **adcsrvacc** utility also lets you create a Service Connection Point (SCP) container and change its permissions and properties after starting the InTrust Server service.

This utility is located in **<InTrust_installation_folder>\Server\ADC\SupportTools**.

To provide automatic creation of SCP or changing its permissions and properties by InTrust means, you should perform one of the following procedures before running **adcsrvacc**:

- Open the ADSI Edit snap-in and specify the following rights for **CN=System, DC=<Domain>** in the Active Directory configuration partition for the account under which you will run the **adcsrvacc** utility: **Create All Child Objects, Read Permissions, Modify Permissions, Read All Properties, Write All Properties**. These permissions must be applied to the **This object and all child objects** scope for this container.
- Open the ADSI Edit snap-in and create the **CN=Quest InTrust, CN=System, DC=<Domain>** in the Active Directory configuration partition. Assign the following rights for this container for the account under which you will run the **adcsrvacc** utility: **Create All Child Objects, Read Permissions, Modify Permissions**.

Run the utility with the following parameters:

```
adcsrvacc.exe -user <user> [-password <password>] [-restart] [-nocheck]
```

Here, **<user>** is the name of the user account (in the **DomainName\UserName** format) you want the services to use from now on; **<password>** is an optional parameter specifying the password of this account. If the password is not supplied, you will be asked to specify it in a secure prompt.

The optional **-restart** parameter automatically restarts the services after the account change.

The optional **-nocheck** parameter makes the utility skip the step where it checks whether the new account has the necessary privileges for access to the InTrust configuration database.

For information about the privileges required by the InTrust Server account, see [System Requirements](#).

Removing Unneeded InTrust Servers

If an InTrust server is no longer needed in an InTrust organization, it is best to remove it from the configuration database. This helps avoid possible problems during InTrust upgrade and other configuration-related operations.

To check for out-of-use InTrust servers

1. Use the SQL Server management tool to open the ADCServer table in the InTrust configuration database.
2. Review the values in the LastServerPing and Status fields to identify InTrust servers that are not in use any more.

When you have determined which servers are not in use any more, uninstall InTrust Server from those computers using the Add or Remove Programs facility.

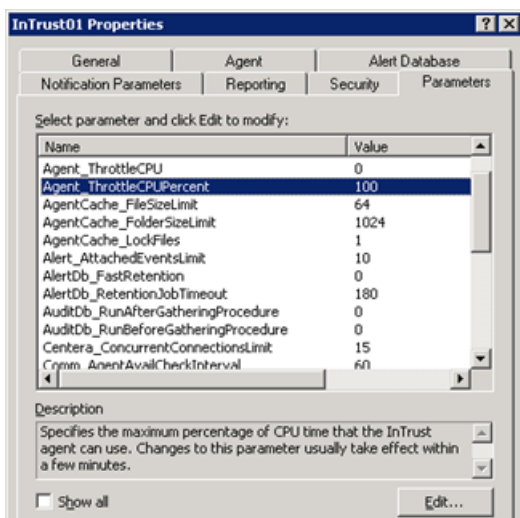

If this fails for some reason (for example, due to a corrupted InTrust Server installation), use the **adremoveserver.exe** command-line utility to clear all configuration data for the out-of-use servers. For that, run the **adremoveserver.exe** utility on an InTrust server different from the ones you are going to remove. The utility is located in the **<InTrust installation folder>\ADC\SupportTools folder**. The syntax is as follows:

```
adremoveserver.exe <server_name>
```

Organization Parameter Editor

The organization parameter editor is a tool for viewing and editing settings directly in the InTrust configuration database. The editor is meant for advanced parameters that are not changed often.

The available settings relate to agents, jobs and so on. They vary in where and how soon they take effect. For details, see the descriptions of individual settings.

Only some of the parameters have descriptions; when the **Show all** option is disabled, these are the only parameters displayed. With the **Show all** option enabled, undocumented parameters are exposed for troubleshooting purposes; they should be changed only on recommendation from product support.

The organization parameter editor is available in the following locations in InTrust Manager:

Location	Scope of effect
Properties of the root node in InTrust Manager, Parameters tab	All servers and agents in the organization, unless overridden on individual servers and agents
Properties of an InTrust server, Parameters tab	The selected server and all of its agents, unless overridden on individual agents
Properties of an InTrust agent, Parameters tab	The selected agent

Parameter settings defined at the InTrust organization level are inherited by servers and further by agents. However, you can override these settings on the server and agent level.

To edit a parameter, select it in the list and click Edit and use the Edit Parameter dialog box that appears. On the server and agent level, this dialog box lets you override inherited parameter settings.

We are more than just a name

We are on a quest to make your information technology work harder for you. That is why we build community-driven software solutions that help you spend less time on IT administration and more time on business innovation. We help you modernize your data center, get you to the cloud quicker and provide the expertise, security and accessibility you need to grow your data-driven business. Combined with Quest's invitation to the global community to be a part of its innovation, and our firm commitment to ensuring customer satisfaction, we continue to deliver solutions that have a real impact on our customers today and leave a legacy we are proud of. We are challenging the status quo by transforming into a new software company. And as your partner, we work tirelessly to make sure your information technology is designed for you and by you. This is our mission, and we are in this together. Welcome to a new Quest. You are invited to Join the Innovation™.

Our brand, our vision. Together.

Our logo reflects our story: innovation, community and support. An important part of this story begins with the letter Q. It is a perfect circle, representing our commitment to technological precision and strength. The space in the Q itself symbolizes our need to add the missing piece — you — to the community, to the new Quest.

Contacting Quest

Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
