Resolved Issues

The following is a list of issues resolved in this full-build update

Feature	Resolved Issue	Defect ID
Console – Reporting	Fixed issue where duplicate emails were being sent for the same scheduled report. More specifically, the problem was a result of an internal error (e.g. database connection failure) occurring while a scheduled report was being generated.	DPM-803

Console – Rules Management & Deployment	Fixed issue where GPOs were occasionally losing Advance Settings.	DPM-805
Console – Reporting	Fixed issue where generated reports were unexpectedly showing "Evaluation version of ActiveReports.." watermark message within the report.	DPM-809

Installing This Update

1. Install the "PAConsole_Pro.msi" on the computer where the console is installed or desired to be installed. This MSI will automatically upgrade over the top of previous installations of the console for versions v4.2.4.1 and below.
2. If the "Deploy Client" feature is configured to deploy the client to target machines, then this process will automatically trigger the new PAClient.msi to be pushed out to the configured computers.
3. If the "Deploy Client" feature was not used to deploy the client to target machines, then use the desired MSI deployment mechanism to push the "PAClient.msi" included in this hotfix out to target computers

See *Privilege Manager v4.2* product documentation for additional information on how to install Privilege Manager.

Determining if This Update Is Installed

To determine if this update is installed:

In the "Programs and Features" applet of the Windows control panel, look for "Privilege Manager Console" in the list of programs and verify which version is listed. If you find that version 4.2.5.2 or above in the list than this hotfix is already installed.
