Managing IBM Notes environments

IBM Notes environment objects such as user accounts, groups, mail-in databases, servers, policies, and certificates can be administrated with One Identity Manager. By defining Notes domains in One Identity Manager, you are able to manage several productive IBM Notes environments in parallel with a One Identity Manager database. Notes users and employee documents are managed as user accounts in One Identity Manager.

One Identity Manager provides company employees with the necessary user accounts. You may use different mechanisms for connecting employees to their Notes user accounts. These user accounts can also be managed separately from employees and therefore administrative user accounts can be set up.

When you certify a new user, a series of user specific files are generated, which must be available to the user for working with IBM Notes. When you add a user with the IBM Notes connector, the user ID file for authentication, the mailbox file, and the user’s personal address book are created.

Groups and mail-in databases are managed by One Identity Manager along side user accounts. Groups are used to provide users the access permissions they need or they can be used for email distribution lists. Users can send or receive messages through shared mail-in databases. Users can access these mail-in databases when access permissions have been granted. If you add a mail-in database using One Identity Manager, the necessary mailbox file is created.

Server documents, certificates, policies, and templates for mailbox files are only loaded into the One Identity Manager database so they can be referenced when you set up user accounts and groups. One Identity Manager access lists can be defined for server documents in order to specify who has access to a server for what reason.

Architecture overview

The visible area of a productive IBM Notes environment is mapped to a Notes domain in One Identity Manager. One Identity Manager needs access to this IBM Notes's Domino Directory for synchronization.

A server is defined within the One Identity Manager environment to execute all administrative task effecting the IBM Notes environment. This server is named the gateway server in the rest of this chapter. The gateway server performs the function of the
synchronization server. It is not a productive Domino server. An IBM Notes client, the One Identity Manager Service, and the IBM Notes connector are installed on the gateway server.

All IBM Notes connector actions are executed from the gateway server. The gateway server communicates with the productive environment’s Domino server when actions are running in the target system. This Domino server is a selected server with a good network connection to the gateway server. The IBM Notes connection requires access to the Domino Directory, preferably therefore, you should use a directory server.

For synchronization, provide an ID file with sufficient administrative permissions for accessing the productive IBM Notes environment. If you want to work with a Certification Authority process (CA process), a certifier ID file must be provided. Both files must be available on the gateway server.

The gateway server executes One Identity Manager Service actions, like certifications, adding, modifying and deleting document in the Domino Directory. In addition to this, databases can be also added to servers for users, mailbox files or mail-in databases on Domino servers. The One Identity Manager Service provides an IBM Notes client context using the IBM Domino COM library and processes all necessary function for exchanging data with the Domino server in it (access to Domino objects, running Notes agents, creating administrative processes (AdminP), error handling).

Figure 1: IBM Notes Connectors communication with IBM Notes

The objects in IBM Notes are mapped as follows in the One Identity Manager database:

</tr>
</tbody>
</table>

| Target system managers | Target system managers must be assigned to **Target systems | IBM Notes** or a sub-application role.  
Users with this application role: |
| -  | Assume administrative tasks for the target system. |
| -  | Create, change or delete target system objects, like user accounts or groups. |
| -  | Edit password policies for the target system. |
| -  | Prepare groups for adding to the IT Shop. |
| -  | Can add employees, who have an other identity than the **Primary identity**. |
| -  | Configure synchronization in the Synchronization Editor and defines the mapping for comparing target systems and One Identity Manager. |
| -  | Edit the synchronization's target system types and outstanding objects. |
| -  | Authorize other employees within their area of responsibility as target system managers and create child application roles if required. |

| One Identity Manager administrators | Create customized permissions groups for application roles for role-based login to administration tools in Designer as required. |
| -  | Create system users and permissions groups for non-role-based login to administration tools in Designer as required. |
| -  | Enable or disable additional configuration parameters in Designer as required. |
| -  | Create custom processes in Designer as required. |
| -  | Create and configures schedules as required. |
| -  | Create and configure password policies as required. |

| Administrators for the IT Shop | Administrators must be assigned to the **Request & Fulfillment | IT Shop | Administrators** application role.  
Users with this application role: |
<p>| -  | Assign groups to IT Shop structures. |</p>
<table>
<thead>
<tr>
<th>User</th>
<th>Tasks</th>
</tr>
</thead>
</table>
| Administrators for organizations             | Administrators must be assigned to the application role **Identity Management | Organizations | Administrators**. Users with this application role:  
|                                               |   • Assign groups to departments, cost centers and locations.        |
| Business roles administrators                 | Administrators must be assigned to the application role **Identity Management | Business roles | Administrators**. Users with this application role:  
|                                               |   • Assign groups to business roles.                                 |
Setting up synchronization with an IBM Notes environment

One Identity Manager supports synchronization with IBM Notes environments in versions 8 and 9 of the IBM Domino Server and the IBM Notes Client version 8.5.3 or later.

To load IBM Notes objects into the One Identity Manager database for the first time

1. Prepare a user with sufficient permissions for synchronizing in IBM Notes.
2. One Identity Manager components for managing IBM Notes environments are available if "TargetSystem\NDO" is set.
   - Check whether the configuration parameter is set in the Designer. Otherwise, set the configuration parameter and compile the database.
   - Other configuration parameters are installed when the module is installed. Check the configuration parameters and modify them as necessary to suit your requirements.
3. Install and configure the gateway server.
4. Create a synchronization project with the Synchronization Editor.
5. If user accounts in IBM Notes are to be registered by the IBM Notes connector, modify the required certificates in One Identity Manager. Enter the path for the certifier's ID file or the name of the CA database.

Detailed information about this topic

- Users and permissions for synchronizing with an IBM Notes environment on page 15
- Installing and configuring a gateway server on page 16
- Creating a synchronization project for initial synchronization of a Notes domain on page 22
- General master data for Notes certificates on page 82
Users and permissions for synchronizing with an IBM Notes environment

The following users are involved in synchronizing One Identity Manager with IBM Notes.

Table 3: Users for synchronization

<table>
<thead>
<tr>
<th>User</th>
<th>Permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td>One Identity Manager Service user account</td>
<td>The user account for One Identity Manager Service requires rights to carry out operations at file level, for example, assigning user rights and creating and editing directories and files.</td>
</tr>
<tr>
<td></td>
<td>The user account must belong to the Domain users group.</td>
</tr>
<tr>
<td></td>
<td>The user account must have the Login as a service extended user right.</td>
</tr>
<tr>
<td></td>
<td>The user account requires access rights to the internal web service.</td>
</tr>
</tbody>
</table>

**NOTE:** If One Identity Manager Service runs under the network service (NT Authority\NetworkService), you can issue access rights for the internal web service with the following command line call:

```
netsh http add urlacl url=http://<IP address>:<port number>/ user="NT AUTHORITY\NETWORKSERVICE"
```

The user account needs full access to the One Identity Manager Service installation directory in order to automatically update the One Identity Manager.

In the default installation the One Identity Manager is installed under:

- %ProgramFiles(x86)%\One Identity (on 32-bit operating systems)
- %ProgramFiles%\One Identity (on 64-bit operating systems)

<table>
<thead>
<tr>
<th>User for accessing the target system (synchronization user)</th>
<th>The user who accesses the system required sufficient administrative permissions to the Domino Directory (names.nsf). The minimum requirements are:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- &quot;Editor&quot; access function on the primary Domino directory</td>
</tr>
<tr>
<td></td>
<td>- Permissions for deleting documents</td>
</tr>
<tr>
<td></td>
<td>- &quot;UserCreator&quot; in addition to the default permissions</td>
</tr>
<tr>
<td></td>
<td>- Administrative access to a Domino server (server on which the Domino Directory is located)</td>
</tr>
</tbody>
</table>
User | Permissions
---|---
new user can be registered and AdminP tasks created | "Editor" is also required for the following databases:
- certlog.nsf
- admin4.nsf

User for accessing the One Identity Manager database | The Synchronization default system user is provided for executing synchronization with an application server.

**Domino server configuration**

Configure the following settings on the Domino server that the gateway server communicates with:

- Set up a full-text index for the Domino directory.
- Set `FT_MAX_SEARCH_RESULTS = 2147483000` in the file `Notes.ini`.
  
  If you apply filters in the Domino Directory, a maximum of 5,000 filtered values are returned. To obtain a complete result list of the elements that satisfy the filter condition, you must overwrite this value in the Domino server's `Notes.ini` file with the value given here.

For more detailed information, see your IBM Notes documentation.

**Installing and configuring a gateway server**

The gateway server administrates the functionality of the synchronization server. To set up a gateway server, a computer has to be available with the following software installed:

- Windows operating system
  
  Following versions are supported:
  - Windows Server 2019
  - Windows Server 2016
  - Windows Server 2012 R2
  - Windows Server 2012
  - Windows Server 2008 R2 (non-Itanium based 64-bit) Service Pack 1 or later
  - Microsoft .NET Framework Version 4.7.2 or later
NOTE: Take the target system manufacturer’s recommendations into account.

- Windows Installer
- IBM Notes Client version 8.5.3

INFORMATION: A real installation must be run. IBM Domino COM class libraries are registered during installation. This requires the IBM Notes connector.

- Write access to the IBM Notes client install directory and the One Identity Manager install directory.
- One Identity Manager Service, IBM Notes connector
  - Install One Identity Manager components with the installation wizard.
    1. Select Select installation modules with existing database.
    2. Select the machine role Server | Job server | IBM Notes.

Special requirements for synchronizing an IBM Domino 8.5. or 9 environment

The following versions of the IBM Notes and IBM Domino components are required for synchronizing an IBM Domino version 8.5 or 9 environment as a minimum.

- IBM Domino Server version 8.5.1 with Fix Pack 2 or later or version 9.0.1.
- IBM Notes Client version 8.5.3, Fix Pack 4

To set up a gateway server

1. Configure the IBM Notes client.
   For more information, see To configure the IBM Notes client on page 17.

2. Install the One Identity Manager Service and declare the gateway server as Job server in the One Identity Manager database. For more information, see Installing and configuring the One Identity Manager Service on page 19.

To configure the IBM Notes client

1. Extend the PATH variable to include the default search path (installation directory) and the data directory (<Installation directory>\data).
   Enter the IBM Notes install path, that means the path where Notes.exe can be found, in the default search path for the operating system (PATH variable). Also insert the path selected for the Notes data directory during installation of the IBM Notes client for the PATH variables.

2. Specify the directory for the ID files repository (<Installation directory>\data\IDS\<Name of the domain>).

3. Ensure the synchronization user’s user ID file is available.
   A separate ID file must be provided for this user. The path to this ID file is entered later into the custom INI file. User ID files with multiple passwords are not supported.
INFORMATION: The administrator ID file that is created when the Notes server is installed may not be used because it is used for other administrative tasks.

4. Keep the certifier ID file available for certificate administration.
   Set up all certifier ID files for registering users on the gateway server. Certifier ID files with multiple passwords are not supported.

5. Start the IBM Notes client with the synchronization user's ID file and log in.
   This causes the configuration entries to be made on the computer. The access rights can be checked by calculating a new user with the ID file as a test.

6. Copy the Domino Directory certificate documents into the user account's personal address book for synchronization.

7. Check whether the certification log certlog.nsf exists.

8. Create a custom INI file.
   The path of the synchronization user's ID file must be entered in this INI file.

NOTE: If you did not install the IBM Notes client in the default install directory, modify the default search path and data directory in the PATH variables as well as the path entries in Notes.ini and your custom INI file to your install directory path.

Detailed information about this topic
- Copying the Notes certificates on page 18
- Creating a custom Notes.ini on page 18

Copying the Notes certificates

When you are configuring the gateway server ensure that the certification documents are copied from the Domino Directory into the synchronization user's personal address book. This is necessary to enable the IBM Notes connector to add, rename, or move user accounts in the target system.

TIP: Copy new certificates regularly from the Domino Directory into the synchronization user's personal address book. For more detailed information about copying certificate documents, see your IBM Notes documentation.

Creating a custom Notes.ini

When you configure the IBM Notes client, the Notes.ini file is created. This file contains configuration information that the IBM Notes connector needs to access the target system. Create a copy of this INI file and make it available to the IBM Notes connector as a custom INI file. The custom INI file must contain the path to the synchronization user's ID file.
Enter thisINI file and the user ID file's password when you configure the system connection with the Synchronization Editor.

To add a customINI file

1. Create a copy of the file Notes.ini. Use the synchronization user's ID file for this.
2. Check the following values in the copy.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory</td>
<td>Path to the Notes data directory (local directory).</td>
</tr>
<tr>
<td>KeyFileName</td>
<td>Path to the ID file of the synchronization user (local directory).</td>
</tr>
<tr>
<td>KitType</td>
<td>Notes Type: 1 = Client, 2 = Server.</td>
</tr>
</tbody>
</table>

Installing and configuring the One Identity Manager Service

The gateway server performs the function of the synchronization server. All One Identity Manager Service actions are executed against the target system environment on the synchronization server. Data entries required for synchronization and administration with the One Identity Manager database are processed by the synchronization server. The synchronization server must be declared as a Job server in One Identity Manager.

NOTE: If several target system environments of the same type are synchronized under the same synchronization server, it is useful to set up a Job server for each target system on performance grounds. This avoids unnecessary swapping of connections to target systems because a Job server only has to process tasks of the same type (re-use of existing connections).

Use the One Identity Manager Service to install the Server Installer. The program executes the following steps:

- Setting up a Job server.
- Specifying machine roles and server function for the Job server.
- Remote installation of One Identity Manager Service components corresponding to the machine roles.
- Configuration of One Identity Manager Service.
- Starts the One Identity Manager Service.

NOTE: The program executes remote installation of the One Identity Manager Service. Local installation of the service is not possible with this program. Remote installation is only supported within a domain or a trusted domain.
For remote installation of One Identity Manager Service, you require an administrative workstation on which the One Identity Manager components are installed. For detailed information about installing a workstation, see the One Identity Manager Installation Guide.

**To install and configure One Identity Manager Service remotely on a server**

1. Start the program Server Installer on your administrative workstation.
2. Enter the valid connection credentials for the One Identity Manager database on the Database connection page.
3. Specify the server on which you want to install One Identity Manager Service on the Server properties page.
   a. Select a Job server from the Server menu.
      - OR -
      To create a new Job server, click Add.
   b. Enter the following data for the Job server.

   **Table 5: Job server properties**

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server</td>
<td>Job server name.</td>
</tr>
<tr>
<td>Queue</td>
<td>Name of the queue to handle the process steps. Each One Identity Manager Service within the network must have a unique queue identifier. The process steps are requested by the job queue using exactly this queue name. The queue identifier is entered in the One Identity Manager Service configuration file.</td>
</tr>
<tr>
<td>Full server name</td>
<td>Full server name in accordance with DNS syntax. Example: &lt;Name of servers&gt;.&lt;Fully qualified domain name&gt;</td>
</tr>
</tbody>
</table>

NOTE: You can use the Extended option to make changes to other properties for the Job server. You can also edit the properties later with Designer.

5. Select IBM Notes connector on the Server functions page.
6. Check the One Identity Manager Service configuration on the Service settings page.

NOTE: The initial service configuration is predefined already. If further changes need to be made to the configuration, you can do this later with the Designer. For detailed information about configuring the service, see the One Identity Manager Configuration Guide.
7. To configure remote installations, click **Next**.
8. Confirm the security prompt with **Yes**.
9. Select the directory with the install files on **Select installation source**.
10. Select the file with the private key on the page **Select private key file**.

   **NOTE:** This page is only displayed when the database is encrypted.
11. Enter the service's installation data on the **Service access** page.

### Table 6: Installation data

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer</td>
<td>Server on which to install and start the service from.</td>
</tr>
<tr>
<td></td>
<td><strong>To select a server</strong></td>
</tr>
<tr>
<td></td>
<td>• Enter a name for the server.</td>
</tr>
<tr>
<td></td>
<td>- OR -</td>
</tr>
<tr>
<td></td>
<td>• Select a entry from the list.</td>
</tr>
<tr>
<td>Service account</td>
<td>User account data for the One Identity Manager Service.</td>
</tr>
<tr>
<td></td>
<td><strong>To enter a user account for the One Identity Manager Service</strong></td>
</tr>
<tr>
<td></td>
<td>• Set the option <strong>Local system account</strong>.</td>
</tr>
<tr>
<td></td>
<td>This starts the One Identity Manager Service under the <strong>NT AUTHORITY\SYSTEM</strong> account.</td>
</tr>
<tr>
<td></td>
<td>- OR -</td>
</tr>
<tr>
<td></td>
<td>• Enter user account, password and password confirmation.</td>
</tr>
<tr>
<td>Installation account</td>
<td>Data for the administrative user account to install the service.</td>
</tr>
<tr>
<td></td>
<td><strong>To enter an administrative user account for installation</strong></td>
</tr>
<tr>
<td></td>
<td>• Enable <strong>Advanced</strong>.</td>
</tr>
<tr>
<td></td>
<td>• Enable <strong>Current user</strong>.</td>
</tr>
<tr>
<td></td>
<td>This uses the user account of the current user.</td>
</tr>
<tr>
<td></td>
<td>- OR -</td>
</tr>
<tr>
<td></td>
<td>• Enter user account, password and password confirmation.</td>
</tr>
</tbody>
</table>

12. Click **Next** to start installing the service.

   Installation of the service occurs automatically and may take some time.
13. Click **Finish** on the last page of Server Installer.

   **NOTE:** The service is entered with the name **One Identity Manager Service** in the server service management.
Creating an archive database for backing up employee documents

You can add an archive database for backing up ID files in order to restore user ID files using the ID restore method. When you add a new user account in the One Identity Manager, a copy of the initial employee document is copied to an archive database on the gateway server. This archive database must initially added and should be part of a daily back up.

**INFORMATION:** The archive database is only required if the ID vault enabled option is disabled for the domain and if user ID files are supposed to be restored by One Identity Manager. For more information, see ID Restore on page 124.

The fastest method of adding an archive database is to create an empty copy of the local address book on the gateway server.

Table 7: Data required for the copy

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server</td>
<td>Local</td>
</tr>
<tr>
<td>Title</td>
<td>Any name</td>
</tr>
<tr>
<td>File Name</td>
<td>Archive.nsf</td>
</tr>
<tr>
<td>Database design only</td>
<td>enabled</td>
</tr>
</tbody>
</table>

By default, the copy of the local address is encrypted for the current user. Therefore, the copy of the synchronization user's local address book must be encrypted in order for the IBM Notes connector to access the archive database.

For more detailed information about adding the address book copy, see your IBM Notes documentation.

Creating a synchronization project for initial synchronization of a Notes domain

Use Synchronization Editor to configure synchronization between the One Identity Manager database and IBM Notes. The following describes the steps for initial configuration of a synchronization project.

After the initial configuration, you can customize and configure workflows within the synchronization project. Use the workflow wizard in the Synchronization Editor for this. The
Synchronization Editor also provides different configuration options for a synchronization project.

Have the following information available for setting up a synchronization project.

**Table 8: Information Required for Setting up a Synchronization Project**

<table>
<thead>
<tr>
<th>Data</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domino server</td>
<td>Name of the Domino server which communicates with the gateway server.</td>
</tr>
<tr>
<td>Domino directory</td>
<td>Name of the Domino directory (Names.nsf).</td>
</tr>
<tr>
<td>Custom INI file</td>
<td>Name and path of the custom INI file. For more information, see Creating a custom Notes.ini on page 18.</td>
</tr>
<tr>
<td>ID file password</td>
<td>Synchronization user's ID file password. The path of this ID file must be given in the custom INI file. The IBM Notes connector access the target system through the synchronization user. Make a user account available with sufficient permissions. For more information, see Users and permissions for synchronizing with an IBM Notes environment on page 15.</td>
</tr>
<tr>
<td>Synchronization server</td>
<td>All One Identity Manager Service actions are executed against the target system environment on the synchronization server. Data entries required for synchronization and administration with the One Identity Manager database are processed by the synchronization server. The gateway server performs the function of the synchronization server. The One Identity Manager Service with the IBM Notes connector must be installed on the synchronization server. The synchronization server must be declared as a Job server in One Identity Manager. Use the following properties when you set up the Job server.</td>
</tr>
</tbody>
</table>

</tbody>
</table>

For more information, see Installing and configuring the One Identity Manager Service on page 19.

- Database server
- Database
- SQL Server Login and password
<table>
<thead>
<tr>
<th>Data</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Specifies whether integrated Windows authentication is used. This type of authentication is not recommended. If you decide to use it anyway, ensure that your environment supports Windows authentication.</td>
</tr>
</tbody>
</table>
| Remote connection server | To configure synchronization with a target system, One Identity Manager must load the data from the target system. One Identity Manager communicates directly with target system to do this. Sometimes direct access from the workstation on which the Synchronization Editor is installed is not possible, because of the firewall configuration, for example, or because the workstation does not fulfill the necessary hardware and software requirements. If you cannot start the Synchronization Editor directly on the gateway server, you can set up a remote connection.  
**To use a remote connection**  
1. Provide a workstation on which the Synchronization Editor is installed.  
2. Install the RemoteConnectPlugin on the gateway server.  
   The gateway server then simultaneously assumes the function of the remote connection server.  
The remote connection server and the workstation must be in the same Active Directory domain.  
Remote connection server configuration:  
   - One Identity Manager Service is started  
   - RemoteConnectPlugin is installed  
   - IBM Notes connector is installed  
The remote connection server must be declared as a Job server in One Identity Manager. The Job server name is required.  
For more detailed information about setting up a remote connection, see the One Identity Manager Target System Synchronization Reference Guide. |

**NOTE:** The following sequence describes how you configure a synchronization project if Synchronization Editor is both:  
- executed in default mode, and  
- started from the launchpad  
If you execute the project wizard in expert mode or directly from Synchronization Editor, additional configuration settings can be made. Follow the project wizard instructions through these steps.
To set up an initial synchronization project for a Notes domain

1. Start the Launchpad on the gateway server and log on to the One Identity Manager database.

   NOTE: If synchronization is executed by an application server, connect the database through the application server.

2. Select **Target system type IBM Notes** and click **Start**.
   This starts the Synchronization Editor’s project wizard.

3. Specify how One Identity Manager can access the target system on the **System access** page.
   - If you started the launch pad on the gateway server, do not change any settings.
   - If you started the launch pad on a workstation, connect remotely.
     Enable the **Connect using remote connection server** option and select the gateway server to use for the connection under **Job server**.

4. On the **Configuration data for the IBM Domino directory** page, enter the connection parameters required by the IBM Notes connector to log in on the target system.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notes.ini</td>
<td>Name and path of the custom INI file.</td>
</tr>
<tr>
<td>Domino server</td>
<td>Name of the Domino server which communicates with the gateway server.</td>
</tr>
<tr>
<td>Domino directory</td>
<td>Name of the Domino directory (Names.nsf).</td>
</tr>
<tr>
<td>ID file password</td>
<td>Synchronization user’s ID file password. The path of this ID file must be given in the custom INI file.</td>
</tr>
</tbody>
</table>

5. You can test the connection in **Verify connection settings**. Click on **Verify project**.
   The One Identity Manager tries to connect to the target system.

6. You can configure additional settings on the **Configuration settings** page.
   - To Notes delete objects using AdminP processes, enable **Delete objects using AdminP processes**. If the option is disabled, the objects are deleted directly in the system by the IBM Notes connector.
   - Click **Finish**, to end the system connection wizard and return to the project wizard.
7. On the **One Identity Manager Connection** tab, test the data for connecting to the One Identity Manager database. The data is loaded from the connected database. Reenter the password.

    **NOTE:** If you use an unencrypted One Identity Manager database and have not yet saved any synchronization projects to the database, you need to enter all connection data again. This page is not shown if a synchronization project already exists.

8. The wizard loads the target system schema. This may take a few minutes depending on the type of target system access and the size of the target system.

9. On the **Restrict target system access** page, you specify how system access should work. You have the following options:

    **Table 11: Specify target system access**

    | Option | Meaning |
    |--------|---------|
    | Read-only access to target system. \(\text{Read-only access to target system.}\) | Specifies whether a synchronization workflow is only to be set up for the initial loading of the target system into the One Identity Manager database. The synchronization workflow has the following characteristics: |
    | \(\text{Read/write access to target system. Provisioning available.}\) | Specifies whether a provisioning workflow is to be set up in addition to the synchronization workflow for the initial loading of the target system. \(\text{Read/write access to target system. Provisioning available.}\) Specifies whether a provisioning workflow is to be set up in addition to the synchronization workflow for the initial loading of the target system. |

    - Synchronization is in the direction of **One Identity Manager**.
    - Processing methods in the synchronization steps are only defined for synchronization in the direction of **One Identity Manager**.

    - Synchronization is in the direction of the **Target system**.
    - Processing methods are only defined in the synchronization steps for synchronization in the direction of the **Target system**.
    - Synchronization steps are only created for such schema classes whose schema types have write access.

10. Select the synchronization server to execute synchronization on the **Synchronization server** page. If the synchronization server is not declared as a Job server in the One Identity Manager database yet, you can add a new Job server.
a. Click **+** to add a new Job server.

b. Enter a name for the Job server and the full server name conforming to DNS syntax.

c. Click **OK**.

   The synchronization server is declared as Job server for the target system in the One Identity Manager- database.

   **NOTE:** After you save the synchronization project, ensure that this server is set up as a synchronization server.

11. To close the project wizard, click **Finish**.

   This creates and allocates a default schedule for regular synchronization. Enable the schedule for regular synchronization.

   he synchronization project is created, saved and enabled immediately.

   **NOTE:** If you do not want the synchronization project to be activated immediately, disable the **Activate and save the new synchronization project automatically** option. In this case, save the synchronization project manually before closing the Synchronization Editor.

   **NOTE:** The connection data for the target system is saved in a variable set and can be modified under **Configuration | Variables** in Synchronization Editor.

---

**To configure the content of the synchronization log**

1. Open the synchronization project in the Synchronization Editor.

2. To configure the synchronization log for target system connection, select the category **Configuration | Target system**.

3. To configure the synchronization log for the database connection, select **Configuration | One Identity Manager connection**.

4. Select the **General** view and click **Configure**.

5. Select the **Synchronization log** view and set **Create synchronization log**.

6. Enable the data to be logged.

   **NOTE:** Some content generates a particularly large volume of log data. The synchronization log should only contain data required for troubleshooting and other analyses.

7. Click **OK**.

---

**To synchronize on a regular basis**

1. Open the synchronization project in the Synchronization Editor.

2. Select the category **Configuration | Start up configurations**.

3. Select a start up configuration in the document view and click **Edit schedule**.

4. Edit the schedule properties.
5. To enable the schedule, click **Activate**.
6. Click **OK**.

**To start initial synchronization manually**

1. Open the synchronization project in the Synchronization Editor.
2. Select the category **Configuration | Start up configurations**.
3. Select a start up configuration in the document view and click **Execute**.
4. Confirm the security prompt with **Yes**.

**NOTE:**
Following a synchronization, employees are automatically created for the user accounts in the default installation. If an account definition for the domain is not yet known at the time of synchronization, user accounts are linked with employees. However, account definitions are not assigned. The user accounts are therefore in a **Linked** state.

To manage the user accounts using account definitions, assign an account definition and a manage level to these user accounts.

**To select user accounts through account definitions**

1. Create an account definition.
2. Assign an account definition to the domain.
3. Assign the account definition and manage level to user accounts in **linked** status.
   a. In Manager, select **IBM Notes | User accounts | Linked but not configured | <Domain>**.
   b. Select **Assign account definition to linked accounts**.

**Detailed information about this topic**

Displaying synchronization results

Synchronization results are summarized in the synchronization log. You can specify the extent of the synchronization log for each system connection individually. One Identity Manager provides several reports in which the synchronization results are organized under different criteria.

**To display a synchronization log**

1. Open the synchronization project in the Synchronization Editor.
2. Select Logs.
3. Click ▶ in the navigation view toolbar.
   
   Logs for all completed synchronization runs are displayed in the navigation view.
4. Select a log by double-clicking on it.
   
   An analysis of the synchronization is shown as a report. You can save the report.

**To display a provisioning log.**

1. Open the synchronization project in the Synchronization Editor.
2. Select Logs.
3. Click ⏯ in the navigation view toolbar.
   
   Logs for all completed provisioning processes are displayed in the navigation view.
4. Select a log by double-clicking on it.
   
   An analysis of the provisioning is show as a report. You can save the report.

The log is marked in color in the navigation view. This mark shows you the execution status of the synchronization/provisioning.

Synchronization logs are stored for a fixed length of time.

**To modify the retention period for synchronization logs**

- In Designer, enable the DPR | Journal | LifeTime configuration parameter and enter the maximum retention period.
Customizing synchronization configuration

You have used the Synchronization Editor to set up a synchronization project for initial synchronization of a Notes domain. You can use this synchronization project to load Notes objects into the One Identity Manager database. If you manage user accounts and their authorizations with One Identity Manager, changes are provisioned in the IBM Notes environment.

You must customize the synchronization configuration in order to compare the IBM Notes database with the regularly and to synchronize changes.

- To use One Identity Manager as the master system during synchronization, create a workflow with synchronization in the direction of the **Target system**.
- To specify which Notes objects and database object are included in synchronization, edit the scope of the target system connection and the One Identity Manager database connection. To prevent data inconsistencies, define the same scope in both systems. If no scope is defined, all objects will be synchronized.
- You can use variables to create generally applicable synchronization configurations that contain the necessary information about the synchronization objects when synchronization starts. Variables can be implemented in base objects, schema classes, or processing methods, for example.
- Use variables to set up a synchronization project which can be used for several different domains. Store a connection parameter as a variable for logging in to the domain.
- Update the schema in the synchronization project if the One Identity Manager schema or target system schema has changed. Then you can add the changes to the mapping.

**IMPORTANT:** As long as synchronization is running, you must not start another synchronization for the same target system. This applies especially, if the same synchronization objects would be processed.

- If another synchronization is started with the same start up configuration, this process is stop and is assigned the **Frozen** execution status. An error message is written to the One Identity Manager Service log file.
- If another synchronization is started with another start up configuration, that addresses same target system, it may lead to synchronization error or loss of data. Specify One Identity Manager behavior in this case, in the start up configuration.
  - Use the schedule to ensure that the start up configurations are executed in sequence.
  - Group start up configurations with the same start up behavior.

For more detailed information about configuring synchronization, see the One Identity Manager Target System Synchronization Reference Guide.
Detailed information about this topic

- How to configure IBM Notes synchronization on page 31
- Configuring synchronization of several Notes domains on page 31
- Updating schemas on page 32

How to configure IBM Notes synchronization

The synchronization project for initial synchronization provides a workflow for initial loading of target system objects (initial synchronization) and one for provisioning object modifications from the One Identity Manager database to the target system (provisioning). To use One Identity Manager as the master system during synchronization, you also require a workflow with synchronization in the direction of the Target system.

To create a synchronization configuration for synchronizing IBM Notes

1. Open the synchronization project in the Synchronization Editor.
2. Check whether existing mappings can be used for synchronizing the target system. Create new maps if required.
3. Create a new workflow with the workflow wizard. Creates a workflow with Target system as its synchronization direction.
4. Create a new start up configuration. Use the new workflow to do this.
5. Save the changes.
6. Run a consistency check.

Related topics

- Configuring synchronization of several Notes domains on page 31

Configuring synchronization of several Notes domains

Prerequisites

- The target system schema of both domains are identical.
- All virtual schema properties used in the mapping must exist in the extended schema of both domains.

To customize a synchronization project for synchronizing another domain

1. Set up a synchronization user with sufficient permissions in the other domain.
2. Open the synchronization project in the Synchronization Editor.
3. Create a new base object for the other domains. Use the wizards to attach a base object.
   - In the wizard, select the IBM Notes connector and declare the connection parameters. The connection parameters are saved in a special variable set.
     A start up configuration is created, which uses the newly created variable set.

4. Change other elements of the synchronization configuration as required.

5. Save the changes.

6. Run a consistency check.

Related topics

**Updating schemas**

All the schema data (schema types and schema properties) of the target system schema and the One Identity Manager schema are available when you are editing a synchronization project. Only a part of this data is really needed for configuring synchronization. If a synchronization project is finished, the schema is compressed to remove unnecessary data from the synchronization project. This can speed up loading the synchronization project. Deleted schema data can be added to the synchronization configuration again at a later point.

If the target system schema or the One Identity Manager schema has changed, these changes must also be added to the synchronization configuration. Then the changes can be added to the schema property mapping.

To include schema data that have been deleted through compressing and schema modifications in the synchronization project, update each schema in the synchronization project. This may be necessary if:

- A schema was changed by:
  - Changes to a target system schema
  - Customizations to the One Identity Manager schema
  - A One Identity Manager update migration

- A schema in the synchronization project was shrunk by:
  - enabling the synchronization project
  - saving the synchronization project for the first time
  - compressing a schema
**To update a system connection schema**

1. Open the synchronization project in the Synchronization Editor.
2. Select **Configuration | Target system**.
   - OR -
   Select **Configuration | One Identity Manager Connection**.
3. Select the view **General** and click **Update schema**.
4. Confirm the security prompt with **Yes**. This reloads the schema data.

**To edit a mapping**

1. Open the synchronization project in the Synchronization Editor.
2. Select the category **Mappings**.
3. Select a mapping in the navigation view.
   Opens the Mapping Editor. For more detailed information about mappings, see the **One Identity Manager Target System Synchronization Reference Guide**.

**NOTE:** The synchronization is deactivated if the schema of an activated synchronization project is updated. Reactivate the synchronization project to synchronize.

**Speeding up synchronization with revision filtering**

When you start synchronization, all synchronization objects are loaded. Some of these objects have not been modified since the last synchronization and, therefore, must not be processed. Synchronization is accelerated by only loading those object pairs that have changed since the last synchronization. One Identity Manager uses revision filtering to accelerate synchronization.

IBM Notes supports revision filtering. The Notes document's last change date is used as revision counter. Each synchronization saves its last execution date as a revision in the the One Identity Manager database (table DPRRevisionStore, column Value). This value is used as a comparison for revision filtering when the same workflow is synchronized the next time. When this workflow is synchronized the next time, the Notes objects' change date is compared with the revision saved in the One Identity Manager database. Only those objects that have been changed since this date are loaded from the target system.

The revision is found at start of synchronization. Objects changed after this point are included with the next synchronization.

Revision filtering can be applied to workflows and start up configuration.
To permit revision filtering on a workflow

- Open the synchronization project in the Synchronization Editor.
- Edit the workflow properties. Select the entry Use revision filter from Revision filtering.

To permit revision filtering for a start up configuration

- Open the synchronization project in the Synchronization Editor.
- Edit the start up configuration properties. Select the entry Use revision filter from Revision filtering.

For more detailed information about revision filtering, see the One Identity Manager Target System Synchronization Reference Guide.

NOTE: The IBM Notes connector can only load date information from Notes documents if a full text search for the Domino Directory is configured on the Domino server.

Post-processing outstanding objects

Objects, which do not exist in the target system, can be marked as outstanding in One Identity Manager by synchronizing. This prevents objects being deleted because of an incorrect data situation or an incorrect synchronization configuration.

Outstanding objects

- Cannot be edited in One Identity Manager.
- Are ignored by subsequent synchronization.
- Are ignored by inheritance calculations.

This means, all memberships and assignments remain intact until the outstanding objects have been processed.

Start target system synchronization to do this.

To post-process outstanding objects

1. In Manager, select the IBM Notes | Target system synchronization: IBM Notes category.
   All tables assigned to the target system type IBM Notes as synchronization tables are displayed in the navigation view.

2. On the Target system synchronization form, in the Table / object column, open the node of the table for which you want to post-process outstanding objects.
   All objects that are marked as outstanding are shown. The Last log entry and Last method run columns display the time at which the last entry was made in the synchronization log and which processing method was executed. The No log available entry can mean the following:
- The synchronization log has already been deleted.
- OR -
- An assignment from a member list has been deleted in the target system.

The base object of the assignment has been updated during the synchronization. A corresponding entry appears in the synchronization log. The entry in the assignment table is marked as outstanding, but there is no entry in the synchronization log.

- An object that contains a member list has been deleted in the target system.

During synchronization, the object and all corresponding entries in assignment tables are marked as outstanding. However, an entry in the synchronization log appears only for the deleted object.

**TIP:**

To display object properties of an outstanding object

a. Select the object on the target system synchronization form.
b. Open the context menu and click **Show object**.

3. Select the objects you want to rework. Multi-select is possible.

4. Click one of the following icons in the form toolbar to execute the respective method.

**Table 12: Methods for handling outstanding objects**

<table>
<thead>
<tr>
<th>Icon</th>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🗑️ Delete</td>
<td>The object is immediately deleted in the One Identity Manager database. Deferred deletion is not taken into account. The <strong>Outstanding</strong> label is removed for the object. Indirect memberships cannot be deleted.</td>
<td></td>
</tr>
<tr>
<td>📝 Publish</td>
<td>The object is added in the target system. The <strong>Outstanding</strong> label is removed for the object. The method triggers the <strong>HandleOutstanding</strong> event. This runs a target system specific process that triggers the provisioning process for the object. Prerequisites:</td>

</tr>
<tr>
<td>⚪️ Reset</td>
<td>The <strong>Outstanding</strong> label is removed for the object.</td>
<td></td>
</tr>
</tbody>
</table>

5. Confirm the security prompt with **Yes**.
NOTE: By default, the selected objects are processed in parallel, which speeds up execution of the selected method. If an error occurs during processing, the action is stopped and all changes are discarded.

Bulk processing of objects must be disabled if errors are to be localized, which means the objects are processed sequentially. Failed objects are named in the error message. All changes that were made up until the error occurred are saved.

To disable bulk processing
- Deactivate in the form toolbar.

You must customize synchronization to synchronize custom tables.

To add custom tables to the target system synchronization
1. In Manager, select IBM Notes | Basic configuration data | Target system types.
2. In the result list, select the target system type IBM Notes.
3. Select Assign synchronization tables.
4. Assign custom tables whose outstanding objects you want to handle in Add assignments.
5. Save the changes.
6. Select Configure tables for publishing.
7. Select custom tables whose outstanding objects can be published in the target system and set Publishable.
8. Save the changes.

NOTE: The target system connector must have write access to the target system in order to publish outstanding objects that are being post-processed. That means, the option Connection is read only must no be set for the target system connection.

### Configuring the provisioning of memberships

Memberships, for example, user accounts in groups, are saved in assignment tables in the One Identity Manager database. During provisioning of modified memberships, changes made in the target system will probably be overwritten. This behavior can occur under the following conditions:

- Memberships are saved in the target system as an object property in list form.
- Memberships can be modified in either of the connected systems.
- A provisioning workflow and provisioning processes are set up.
If a membership in One Identity Manager changes, the complete list of members is transferred to the target system by default. Memberships, previously added to the target system are removed by this; previously deleted memberships are added again.

To prevent this, provisioning can be configured such that only the modified membership is provisioned in the target system. The corresponding behavior is configured separately for each assignment table.

**To allow separate provisioning of memberships**

1. In Manager, select IBM Notes | Basic configuration data | Target system types.
2. Select IBM Notes in the result list.
3. Select Configure tables for publishing.
4. Select the assignment tables for which you want to allow separate provisioning. Multi-select is possible.
   - This option can only be enabled for assignment tables that have a base table with XDateSubItem or CCC_XDateSubItem column.
   - Assignment tables that are grouped together in a virtual schema property in the mapping must be marked identically.
5. Click Enable merging.
6. Save the changes.

For each assignment table labeled like this, the changes made in One Identity Manager are saved in a separate table. During modification provisioning, the members list in the target system is compared to the entries in this table. This means that only modified memberships are provisioned and the members list does not get entirely overwritten.

**NOTE:** The complete members list is updated by synchronization. During this process, objects with changes but incomplete provisioning are not handled. These objects are logged in the synchronization log.

For more detailed information about provisioning memberships, see the One Identity Manager Target System Synchronization Reference Guide.

### Help for the analysis of synchronization issues

You can generate a report for analyzing problems which occur during synchronization, for example, insufficient performance. The report contains information such as:

- Consistency check results
- Revision filter settings
- Scope applied
- Analysis of the synchronization buffer
- Object access times in the One Identity Manager database and in the target system

**To generate a synchronization analysis report**

1. Open the synchronization project in the Synchronization Editor.
2. Select the menu Help | Generate synchronization analysis report and answer the security prompt with Yes.
   The report may take a few minutes to generate. It is displayed in a separate window.
3. Print the report or save it in one of the available output formats.

**Deactivating synchronization**

Regular synchronization cannot be started until the synchronization project and the schedule are active.

**To prevent regular synchronization**

1. Open the synchronization project in the Synchronization Editor.
2. Select the start up configuration and deactivate the configured schedule.
   Now you can only start synchronization manually.

An activated synchronization project can only be edited to a limited extend. The schema in the synchronization project must be updated if schema modifications are required. The synchronization project is deactivated in this case and can be edited again.

Furthermore, the synchronization project must be deactivated if synchronization should not be started by any means (not even manually).

**To deactivate the synchronization project**

1. Open the synchronization project in the Synchronization Editor.
2. Select General on the start page.
3. Click Deactivate project.

**Detailed information about this topic**

- Creating a synchronization project for initial synchronization of a Notes domain on page 22
Basic configuration data

The following basic data is relevant for managing an IBM Notes environment in One Identity Manager.

- **Configuration parameters**
  
  Use configuration parameters to configure the behavior of the system's basic settings. One Identity Manager provides default settings for different configuration parameters. Check the configuration parameters and modify them as necessary to suit your requirements.

  Configuration parameters are defined in the One Identity Manager modules. Each One Identity Manager module can also install configuration parameters. You can find an overview of all configuration parameters in **Base data | General | Configuration parameters** in Designer.

  For more information, see **Appendix: Configuration parameters for synchronization with a Notes domain** on page 190.

- **Account definitions**

  One Identity Manager has account definitions for automatically allocating user accounts to employees during working hours. You can create account definitions for every target system. If an employee does not yet have a user account in a target system, a new user account is created. This is done by assigning account definitions to an employee.

  For more information, see **Setting up account definitions** on page 40.

- **Password policies**

  One Identity Manager provides you with support for creating complex password policies, for example, for system user passwords, the employees’ central password as well as passwords for individual target systems. Password policies apply not only when the user enters a password but also when random passwords are generated.

  Predefined password policies are supplied with the default installation that you can user or customize if required. You can also define your own password policies.

  For more information, see **Password policies for Notes user accounts** on page 57.
- Initial password for new user accounts
  You have the different options for issuing an initial password for user accounts. The central password of the assigned employee can be aligned with the user account password, a predefined, fixed password can be used or a randomly generated initial password can be issued.
  For more information, see Initial password for new Notes user accounts on page 68.
- Email notifications about login data
  When a new user account is created, the login data are sent to a specified recipient. In this case, two messages are sent with the user name and the initial password. Mail templates are used to generate the messages.
  For more information, see Email notifications about login data on page 69.
- Target system types
  Target system types are required for configuring target system comparisons. Tables containing outstanding objects are maintained on target system types.
  For more information, see Post-processing outstanding objects on page 34.
- Target system managers
  A default application role exists for the target system manager in One Identity Manager. Assign the employees who are authorized to edit all domains in One Identity Manager to this application role.
  Define additional application roles if you want to limit the edit permissions for target system managers to individual domains. ns for target system managers to individual farms. SharePoint The application roles must be added under the default application role.
  For more information, see Target system managers on page 75.
- Server
  Servers must know your server functionality in order to handle IBM Notes specific processes in One Identity Manager. That includes the gateway server, for example.
  For more information, see Editing a server on page 70.

### Setting up account definitions

One Identity Manager has account definitions for automatically allocating user accounts to employees during working hours. You can create account definitions for every target system. If an employee does not yet have a user account in a target system, a new user account is created. This is done by assigning account definitions to an employee.

The data for the user accounts in the respective target system comes from the basic employee data. The employee must own a central user account. The assignment of the IT operating data to the employee’s user account is controlled through the primary assignment of the employee to a location, a department, a cost center, or a business role (template processing). Processing is done through templates. There are predefined
templates for determining the data required for user accounts included in the default installation. You can customize templates as required.

For detailed information about account definitions, see the One Identity Manager Target System Base Module Administration Guide.

The following steps are required to implement an account definition:

- Creating an account definition
- Creating manage levels
- Creating a formatting rule for IT operating data
- Determining IT operating data
- Assigning account definitions to employees
- (Optional) Assigning account definitions to a target system

Creating an account definition

To create a new account definition

1. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
2. Select an account definition in the result list. Select Change master data.
   -OR-
   Click 📝 in the result list.
3. Enter the account definition's master data.
4. Save the changes.

Master data for an account definition

Enter the following data for an account definition:

</tbody>
</table>

## Creating manage levels

Specify the manage level for an account definition for managing user accounts. The user account’s manage level specifies the extent of the employee’s properties that are inherited by the user account. This allows an employee to have several user accounts in one target system, for example:

- Default user account that inherits all properties from the employee
- Administrative user account that is associated to an employee but should not inherit the properties from the employee.

One Identity Manager supplies a default configuration for manage levels:
- **Unmanaged**: User accounts with the **Unmanaged** manage level are linked to the employee but they do not inherit any further properties. When a new user account is added with this manage level and an employee is assigned, some of the employee's properties are transferred initially. If the employee properties are changed at a later date, the changes are not passed onto the user account.

- **Full managed**: User accounts with the **Full managed** manage level inherit defined properties of the assigned assigned employee. When a new user account is created with this manage level and an employee is assigned, the employee's properties are transferred in an initial state. If the employee properties are changed at a later date, the changes are passed onto the user account.

> **NOTE**: The **Full managed** and **Unmanaged** are analyzed in templates. You can customize the supplied templates in the Designer.

You can define other manage levels depending on your requirements. You need to amend the templates to include manage level approaches.

Specify the effect of temporarily or permanently disabling, deleting or the security risk of an employee on its user accounts and group memberships for each manage level. For detailed information about manage levels, see the *One Identity Manager Target System Base Module Administration Guide*.

- Employee user accounts can be locked when they are disabled, deleted or rated as a security risk so that permissions are immediately withdrawn. If the employee is reinstated at a later date, the user accounts are also reactivated.

- You can also define group membership inheritance. Inheritance can be discontinued if desired when, for example, the employee's user accounts are disabled and therefore cannot be members in groups. During this time, no inheritance processes should be calculated for this employee. Existing group memberships are deleted!

**To assign manage levels to an account definition**

1. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions**.
2. Select an account definition in the result list.
3. Select **Assign manage level**.
4. Assign the manage levels in **Add assignments**.
   - OR -
   
   Delete the manage levels in **Remove assignments**.
5. Save the changes.

> **IMPORTANT**: The **Unmanaged** manage level is assigned automatically when you create an account definition and it cannot be removed.
**To edit a manage level**

1. Select **IBM Notes | Basic configuration data | Account definitions | Manage levels.**
2. Select the manage level in the result list. Select **Change master data.**
   - OR-
   Click in the result list.
3. Edit the manage level’s master data.
4. Save the changes.

**Master data for a manage level**

Enter the following data for a manage level.

**Table 14: Master data for manage levels**

<table>
<thead>
<tr>
<th>Property</th>

</table>

Creating a formatting rule for IT operating data

An account definition specifies which rules are used to form the IT operating data and which default values will be used if no IT operating data can be found through the employee's primary roles.

The following IT operating data is used in the One Identity Manager default configuration for automatic creating and modifying of user accounts for an employee in the target system.

- IBM Notes server
- IBM Notes certificate
- Mailbox template
- Groups can be inherited
- Identity
- Privileged user account

To create a mapping rule for IT operating data

1. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
2. Select an account definition in the result list.
3. Select **Edit IT operating data mapping** and enter the following data.

### Table 15: Mapping rule for IT operating data

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Column</td>
<td>User account property for which the value is set. In the menu, you can select the columns that use the TSB_ITDataFromOrg script in their template. For detailed information, see the One Identity Manager Target System Base Module Administration Guide.</td>
</tr>
<tr>
<td>Source</td>
<td>Specifies which roles to use in order to find the user account properties. You have the following options:</td>
</tr>
<tr>
<td></td>
<td>• Primary department</td>
</tr>
<tr>
<td></td>
<td>• Primary location</td>
</tr>
<tr>
<td></td>
<td>• Primary cost center</td>
</tr>
<tr>
<td></td>
<td>• Primary business roles</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> Only use the primary business role if the Business Roles Module is installed.</td>
</tr>
<tr>
<td></td>
<td>• Empty</td>
</tr>
<tr>
<td></td>
<td>If you select a role, you must specify a default value and set the option <strong>Always use default value</strong>.</td>
</tr>
<tr>
<td>Default value</td>
<td>Default value of the property for an employee's user account if the value is not determined dynamically from the IT operating data.</td>
</tr>
<tr>
<td>Always use default value</td>
<td>Specifies whether user account properties are always filled with the default value. IT operating data is not determined dynamically from a role.</td>
</tr>
<tr>
<td>Notify when applying the standard</td>
<td>Specifies whether email notification to a defined mailbox is sent when the default value is used. The <strong>Employee - new user account with default properties created</strong> mail template is used. To change the mail template, adjust the TargetSystem</td>
</tr>
</tbody>
</table>

4. Save the changes.

### Determining IT operating data

To create user accounts with the **Full managed** manage level, the required IT operating data must be determined. The operating data required to automatically supply an employee with IT resources is shown in the business roles, departments, locations or cost centers. An employee is assigned a primary business role, primary location, primary department or primary cost center. The necessary IT operating data is ascertained from
these assignments and used in creating the user accounts. Default values are used if valid IT operating data cannot be found over the primary roles.

You can also specify IT operating data directly for a specific account definition.

**Example**

Normally, each employee in department A obtains a default user account in the domain A. In addition, certain employees in department A obtain administrative user accounts in the domain A.

Create an account definition A for the default user account of the domain A and an account definition B for the administrative user account of domain A. Specify the property "Department" in the IT operating data formatting rule for the account definitions A and B in order to determine the valid IT operating data.

Specify the effective IT operating data of department A for the domain A. This IT operating data is used for standard user accounts. In addition, specify the effective account definition B IT operating data for department A. This IT operating data is used for administrative user accounts.

**To define IT operating data**

1. In Manager, select the role in the Organizations or Business roles category.
2. Select the Edit IT operating data task.

---
3. Click **Add** and enter the following data.

**Table 16: IT operating data**

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
</table>
| Effects on | IT operating data application scope. The IT operating data can be used for a target system or a defined account definition. To specify an application scope  
  a. Click ➔ next to the text box.  
  b. Under **Table**, select the table that maps the target system for select the **TSBAccountDef** table for an account definition.  
  c. Select the specific target system or account definition under **Effects on**.  
  d. Click **OK**. |
| Column | User account property for which the value is set. In the menu, you can select the columns that use the **TSB_ITDataFromOrg** script in their template. For detailed information, see the *One Identity Manager Target System Base Module Administration Guide*. |
| Value | Concrete value which is assigned to the user account property. |

4. Save the changes.

**Modify IT operating data**

If IT operating data changes, you must transfer these changes to the existing user accounts. To do this, templates must be rerun on the affected columns. Before you can run the templates, you can check what effect a change to the IT operating data has on the existing user accounts. You can decide whether the change is transferred to the One Identity Manager database in the case of each affected column in each affected database.

**Prerequisites**

- The IT operating data of a department, cost center, business role, or a location was changed.
  - OR -
- The default values in the IT operating data template were modified for an account definition.

**NOTE:** If the assignment of an employee to a primary department, cost center, business role or to a primary location changes, the templates are automatically executed.
To execute the template

1. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
2. Select an account definition in the result list.
3. Select Execute templates in the task view

   This displays a list of all user account, which are created through the selected account definition and whose properties are changed by modifying the IT operating data.

   Old value: Current value of the object property.
   New value: Value that the object property would have following modification of the IT operating data.
   Selection: Specifies whether the modification shall be adopted for the user account.

4. Mark all the object properties in the selection column that will be given the new value.
5. Click Apply.

The templates are applied to all selected user accounts and properties.

Assigning account definitions to employees

Account definitions are assigned to company employees.

Indirect assignment is the default method for assigning account definitions to employees. Account definitions are assigned to departments, cost centers, locations or roles. The employees are categorized into these departments, cost centers, locations or roles depending on their function in the company and thus obtain their account definitions. To react quickly to special requests, you can assign individual account definitions directly to employees.

You can automatically assign special account definitions to all company employees. It is possible to assign account definitions to the IT Shop as requestable products. A department manager can then request user accounts from the Web Portal for his staff. It is also possible to add account definitions to system roles. These system roles can be assigned to employees through hierarchical roles or directly or added as products in the IT Shop.

In the One Identity Manager default installation, the processes are checked at the start to see if the employee already has a user account in the target system that has an account definition. If no user account exists, a new user account is created with the account definition’s default manage level.

**NOTE:** If a user account already exists and is disabled, then it is re-enabled. You have to alter the user account manage level afterwards in this case.
Prerequisites for indirect assignment of account definitions to employees

- Assignment of employees and account definitions is permitted for role classes (department, cost center, location or business role).

**NOTE:** As long as an account definition for an employee is valid, the employee retains the user account that was created by it. If the assignment of an account definition is removed, the user account that was created from this account definition is deleted.

For detailed information about preparing role classes to be assigned, see the One Identity Manager Identity Management Base Module Administration Guide.

Assigning account definitions to departments, cost centers, and locations

**To add account definitions to hierarchical roles**

1. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
2. Select an account definition in the result list.
3. Select Assign organizations.
4. Assign organizations in Add assignments.
   - Assign departments on the Departments tab.
   - Assign locations on the Locations tab.
   - Assign cost centers on the Cost centers tab.

**TIP:** In the Remove assignments area, you can remove the assignment of organizations.

**To remove an assignment**

- Select the organization and double click.

5. Save the changes.

Assigning account definitions to business roles

Installed modules: Business Roles Module

**To add account definitions to hierarchical roles**

1. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
2. Select an account definition in the result list.
3. Select **Assign business roles** in the task view.

4. Assign business roles in **Add assignments**.

   **TIP:** In the **Remove assignments** area, you can remove the assignment of business roles.

   **To remove an assignment**
   - Select the business role and double click 🔄.

5. Save the changes.

### Assigning account definitions to all employees

**To assign an account definition to all employees**

1. In Manager, select **IBM Notes** | Basic configuration data | Account definitions | Account definitions.

2. Select an account definition in the result list.

3. Select **Change master data**.

4. Set **Automatic assignment to employees** on General.

   **IMPORTANT:** Only set this option if you can ensure that all current internal employees in the database and all pending newly added internal employees obtain a user account in this target system.

5. Save the changes.

The account definition is assigned to every employee that is not marked as external. New employees automatically obtain this account definition as soon as they are added. The assignment is calculated by the DBQueue Processor.

**NOTE:** Disable **Automatic assignment to employees** to remove automatic assignment of the account definition to all employees. The account definition cannot be reassigned to employees from this point on. Existing assignments remain intact.

### Assigning account definitions directly to employees

**To assign an account definition directly to employees**

1. In Manager, select **IBM Notes** | Basic configuration data | Account definitions | Account definitions.

2. Select an account definition in the result list.

3. Select **Assign to employees** in the task view.
4. Assign employees in **Add assignments**.

   - **TIP:** In the **Remove assignments** area, you can remove the assignment of employees.

   **To remove an assignment**
   - Select the employee and double-click ☑.

5. Save the changes.

### Assigning account definitions to system roles

Installed modules: System Roles Module

- **NOTE:** Account definitions with **Only use in IT Shop** can only be assigned to system roles that also have this option set.

**To add account definitions to a system role**

1. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions**.
2. Select an account definition in the result list.
3. Select **Assign system roles in the task view**.
4. Assign system roles in **Add assignments**.

   - **TIP:** In the **Remove assignments** area, you can remove the assignment of system roles.

   **To remove an assignment**
   - Select the system role and double click ☑.

5. Save the changes.

### Adding account definitions in the IT Shop

A account definition can be requested by shop customers when it is assigned to an IT Shop shelf. To ensure it can be requested, further prerequisites need to be guaranteed.

- The account definition must be labeled with the **IT Shop** option.
- The account definition must be assigned to a service item.

- **TIP:** In Web Portal, all products that can be requested are grouped together by service category. To make the account definition easier to find in Web Portal, assign a service category to the service item.

- If the account definition is only assigned to employees using IT Shop assignments,
you must also set **Only for use in IT Shop**. Direct assignment to hierarchical roles may not be possible.

**NOTE:** IT Shop administrators can assign account definitions to IT Shop shelves if login is role-based. Target system administrators are not authorized to add account definitions in the IT Shop.

**To add an account definition to the IT Shop**

1. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions** (non-role-based login).
   - OR -
   1. In Manager, select **Entitlements | Account definitions** (role-based login).
2. Select an account definition in the result list.
3. Select **Add to IT Shop**.
4. Assign the account definitions to the IT Shop shelves in **Add assignments**.
5. Save the changes.

**To remove an account definition from individual IT Shop shelves**

1. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions** (non-role-based login).
   - OR -
   1. In Manager, select **Entitlements | Account definitions** (role-based login).
2. Select an account definition in the result list.
3. Select **Add to IT Shop**.
4. Remove the account definitions from the IT Shop shelves in **Remove assignments**.
5. Save the changes.

**To remove an account definition from all IT Shop shelves**

1. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions** (non-role-based login).
   - OR -
   1. In Manager, select **Entitlements | Account definitions** (role-based login).
2. Select an account definition in the result list.
3. Select **Remove from all shelves (IT Shop)**.
4. Confirm the security prompt with **Yes**.
5. Click **OK**.

The account definition is removed from all shelves by One Identity Manager Service. All requests and assignment requests with this account definition are canceled in the process.
For more detailed information about request from company resources through the IT Shop, see the One Identity Manager IT Shop Administration Guide.

- Assigning account definitions to system roles on page 53

Assigning account definitions to a target system

The following prerequisites must be fulfilled if you implement automatic assignment of user accounts and employees resulting in administered user accounts (state Linked configured):
- The account definition is assigned to the target system.
- The account definition has the default manage level.

User accounts are only linked to the employee (Linked) if no account definition is given. This is the case on initial synchronization, for example.

To assign the account definition to a target system
1. In Manager, select the domain in IBM Notes | Domain.
2. Select Change master data.
3. Select the account definition for user accounts from Account definition (initial).
4. Save the changes.

Deleting an account definition

You can delete account definitions if they are not assigned to target systems, employees, hierarchical roles or any other account definitions.

To delete an account definition
1. Remove automatic assignments of the account definition from all employees.
   a. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
b. Select an account definition in the result list.
c. Select **Change master data**.
d. Disable **Automatic assignment to employees** on the **General** tab.
e. Save the changes.

2. **Remove direct assignments of the account definition to employees.**
   a. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions**.
   b. Select an account definition in the result list.
   c. Select **Assign to employees** in the task view.
   d. Remove employees from **Remove assignments**.
   e. Save the changes.

3. **Remove the account definition’s assignments to departments, cost centers and locations.**
   a. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions**.
   b. Select an account definition in the result list.
   c. Select **Assign organizations**.
   d. In **Remove assignments**, remove the relevant departments, cost centers, and locations.
   e. Save the changes.

4. **Remove the account definition’s assignments to business roles.**
   a. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions**.
   b. Select an account definition in the result list.
   c. Select **Assign business roles**.
      Remove the business roles in **Remove assignments**.
   d. Save the changes.

5. **If the account definition was requested through the IT Shop, it must be canceled and removed from all IT Shop shelves.**
   
   For more detailed information about unsubscribing requests, see the **One Identity Manager Web Portal User Guide**.

**To remove an account definition from all IT Shop shelves**

a. In Manager, select **IBM Notes | Basic configuration data | Account definitions | Account definitions** (non-role-based login).
   
   - OR -

   In Manager, select **Entitlements | Account definitions** (role-based login).
b. Select an account definition in the result list.
c. Select Remove from all shelves (IT Shop).
d. Confirm the security prompt with Yes.
e. Click OK.

The account definition is removed from all shelves by One Identity Manager Service. All requests and assignment requests with this account definition are canceled in the process.

6. Remove the account definition assignment as required account definition for another account definition. As long as the account definition is required for another account definition, it cannot be deleted. Check all the account definitions.
   a. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
   b. Select an account definition in the result list.
   c. Select Change master data.
   d. Remove the account definition in the Required account definition menu.
   e. Save the changes.

7. Remove the account definition's assignments to target systems.
   a. In Manager, select the domain in IBM Notes | Domain.
   b. Select Change master data.
   c. Remove the assigned account definitions on the General tab.
   d. Save the changes.

8. Delete the account definition.
   a. In Manager, select IBM Notes | Basic configuration data | Account definitions | Account definitions.
   b. Select an account definition in the result list.
   c. Click to delete an account definition.

Password policies for Notes user accounts

One Identity Manager provides you with support for creating complex password policies, for example, for system user passwords, the employees' central password as well as passwords for individual target systems. Password polices apply not only when the user enters a password but also when random passwords are generated.

Predefined password policies are supplied with the default installation that you can use or customize if required. You can also define your own password policies.
Detailed information about this topic

- Predefined password policies on page 58
- Using a password policy on page 59
- Editing password policies on page 61
- Custom scripts for password requirements on page 64
- Excluded list for passwords on page 66
- Checking a password on page 67
- Testing generation of a password on page 67

Predefined password policies

You can customize predefined password policies to meet your own requirements, if necessary.

Password for logging in to One Identity Manager

The One Identity Manager password policy is applied for logging in to One Identity Manager. This password policy defined the settings for the system user passwords (DialogUser.Password and Person.DialogUserPassword) as well as the access code for a one off login on the Web Portal (Person.Passcode).

⚠️ **NOTE:** The One Identity Manager password policy is marked as the default policy. This password policy is applied if no other password policy can be found for employees, user accounts or system users.

For detailed information about password policies for employees, see the One Identity Manager Identity Management Base Module Administration Guide.

Password policy for forming employees' central passwords

An employee’s central password is formed from the target system specific user accounts by respective configuration. The Employee central password policy password policy defines the settings for the (Person.CentralPassword) central password. Members of the Identity Management | Employees | Administrators application role can adjust this password policy.

⚠️ **IMPORTANT:** Ensure that the Employee central password policy password policy does not violate the system-specific requirements for passwords.

For detailed information about password policies for employees, see the One Identity Manager Identity Management Base Module Administration Guide.
Password policies for user accounts

Predefined password policies are provided, which you can apply to the user account password columns of the user accounts.

**IMPORTANT:** If you do not use password policies that are specific to the target system, the **One Identity Manager password policy** standard policy applies. In this case, ensure that the default policy does not violate the target systems requirements.

**NOTE:** When you update One Identity Manager version 7.x to One Identity Manager version 8.1.1, the configuration parameter settings for forming passwords are passed on to the target system specific password policies.

The **IBM Notes password policy** is predefined for Notes. You can apply this password policy to Notes user accounts (NDOUser.UserPassword, NDOUser.InternetPassword and NDOUser.InitialPassword) of a Notes domain.

If the domains' password requirements differ, it is recommended that you set up your own password policies for each domain.

Furthermore, you can apply password policies based on the account definition of the user accounts or based on the manage level of the user accounts.

Using a password policy

The **IBM Notes password policy** is predefined for Notes. You can apply this password policy to Notes user accounts (NDOUser.UserPassword, NDOUser.InternetPassword and NDOUser.InitialPassword) of a Notes domain.

If the domains' password requirements differ, it is recommended that you set up your own password policies for each domain.

Furthermore, you can apply password policies based on the account definition of the user accounts or based on the manage level of the user accounts.

The password policy that is to be used for a user account is determined in the following sequence:

1. Password policy of the account definition of the user account
2. Password policy of the manage level of the user account
3. Password policies for the Notes domain of the user account
4. Password policy **One Identity Manager password policy** (default policy)

**IMPORTANT:** If you do not use password policies that are specific to the target system, the **One Identity Manager password policy** standard policy applies. In this case, ensure that the default policy does not violate the target systems requirements.
To reassign a password policy

1. In the Manager, select the IBM Notes | Basic configuration data | Password policies category.
2. Select the password policy in the result list.
3. Select Assign objects.
4. Click Add in the Assignments section and enter the following data.

Table 17: Assigning a Password Policy

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apply to</td>
<td>Application scope of the password policy.</td>
</tr>
</tbody>
</table>

**To specify an application scope**

a. Click next to the text box.

b. Select one of the following references under Table:
   - The table that contains the base objects of synchronization.
   - To apply the password policy based on the account definition, select the TSBAccountDef table.
   - Select the TSBBehavior table to apply the password policy based on the manage level.

c. Select the table that contains the base objects under Apply to:
   - If you have selected the table containing the base objects of synchronization, next select the specific target system.
   - If you have selected the TSBAccountDef table, next select the specific account definition.
   - If you have selected the TSBBehavior table, next select the specific manage level.

d. Click OK.

<table>

</table>

5. Save the changes.

To change a password policy’s assignment

1. In the Manager, select the IBM Notes | Basic configuration data | Password policies category.
2. Select the password policy in the result list.
3. Select Assign objects.
4. Select the assignment you want to change in Assignments.
5. Select the new password policy to apply from the Password Policies menu.
6. Save the changes.

Editing password policies

To edit a password policy

1. In the Manager, select the IBM Notes | Basic configuration data | Password policies category.
2. Select the password policy in the result list and select Change master data.
   - OR -
   Click 📀 in the result list.
3. Edit the password policy's master data.
4. Save the changes.

<td>Specifies whether the password can contain lower case letters. This setting is only applies when passwords are generated.</td>
</tr>
<tr>
<td>Uppercase not allowed</td>
<td>Specifies whether the password can contain upper case letters. This setting is only applies when passwords are generated.</td>
</tr>
<tr>
<td>Digits not allowed</td>
<td>Specifies whether the password can contain digits. This setting is only applies when passwords are generated.</td>
</tr>
<tr>
<td>Special characters not allowed</td>
<td>Specifies whether the password can contain special characters. This setting is only applies when passwords are generated.</td>
</tr>
</tbody>
</table>

### Custom scripts for password requirements

You can implement custom scripts for testing and generating password if the password requirements cannot be mapped with the existing settings options. Scripts are applied in addition to the other settings.

**Detailed information about this topic**

- [Script for checking a password](#) on page 64
- [Script for generating a password](#) on page 65

### Script for checking a password

You can implement a check script if additional policies need to be used for checking a password, which cannot be mapped with the available settings.

**Syntax for Check Scripts**

Public Sub CCC_CustomPwdValidate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)

With parameters:
- policy = password policy object
- spwd = password to test

TIP: To use a base object, take the property Entity of the PasswordPolicy class.

**Example for a script for testing a password**

A password cannot start with ? or !. The script checks a given password for validity.
Public Sub CCC_PwdValidate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)
    Dim pwd = spwd.ToInsecureArray()
    If pwd.Length>0
        If pwd(0)="?" Or pwd(0)="!
            Throw New Exception(#LD("Password can't start with '?' or '!'")#)
        End If
    End If
    If pwd.Length>2
        If pwd(0) = pwd(1) AndAlso pwd(1) = pwd(2)
            Throw New Exception(#LD("Invalid character sequence in password")#)
        End If
    End If
End Sub

To use a custom script for checking a password
1. Create your script in the category Script Library in the Designer.
2. Edit the password policy.
   a. In the Manager, select the IBM Notes | Basic configuration data | Password policies category.
   b. Select the password policy in the result list.
   c. Select Change master data.
   d. Enter the name of the script to be used to check a password in the Check script input field on the Scripts tab.
   e. Save the changes.

Related topics
- Script for generating a password on page 65

Script for generating a password

You can implement a generating script if additional policies need to be used for generating a random password, which cannot be mapped with the available settings.

Syntax for generating script

Public Sub CCC_PwdGenerate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)
With parameters:
policy = password policy object
spwd = generated password

**TIP:** To use a base object, take the property Entity of the PasswordPolicy class.

### Example for a script to generate a password

In random passwords, the script replaces the ? and ! characters, which are not permitted.

```vbscript
Public Sub CCC_PwdGenerate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)
    Dim pwd = spwd.ToInsecureArray()
' replace invalid characters at first position
    If pwd.Length>0
        If pwd(0)="?" Or pwd(0)="!
            spwd.SetAt(0, CChar("_"))
        End If
    End If
End Sub
```

### To use a custom script for generating a password

1. Create your script in the category **Script Library** in the Designer.
2. Edit the password policy.
   a. In the Manager, select the IBM Notes | Basic configuration data | Password policies category.
   b. Select the password policy in the result list.
   c. Select Change master data.
   d. Enter the name of the script to be used to generate a password in the Generating script input field on the Scripts tab.
   e. Save the changes.

### Related topics

- *Script for checking a password* on page 64

### Excluded list for passwords

You can add words to a list of restricted terms to prohibit them from being used in passwords.

**NOTE:** The restricted list applies globally to all password policies.
To add a term to the restricted list

1. Select **Base Data | Security settings | Restricted passwords** in Designer.
2. Create a new entry with **Object | New** an enter the term to excluded to the list.
3. Save the changes.

Checking a password

When you test a password, all the password policy settings, custom scripts and the restricted passwords are taken into account.

To test whether a password conforms to the password policy

1. In the Manager, select the **IBM Notes | Basic configuration data | Password policies** category.
2. Select the password policy in the result list.
3. Select **Change master data**.
4. Select the **Test** tab.
5. Select the table and object to be tested in **Base object for test**.
6. Enter a password in **Enter password to test**.
   A display next to the password shows whether it is valid or not.

Testing generation of a password

When you generate a password, all the password policy settings, custom scripts and the restricted passwords are taken into account.

To generate a password that conforms to the password policy

1. In the Manager, select the **IBM Notes | Basic configuration data | Password policies** category.
2. Select the password policy in the result list.
3. Select **Change master data**.
4. Select the **Test** tab.
5. Click **Generate**.
   This generates and displays a password.
# Initial password for new Notes user accounts

Table 21: Configuration parameters for formatting initial passwords for user accounts

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>QER\Person\UseCentralPassword</td>
<td>This configuration parameter specifies whether the employee’s central password is used in the user accounts. The employee’s central password is automatically mapped to the employee’s user account in all permitted target systems. This excludes privileged user accounts, which are not updated.</td>
</tr>
<tr>
<td>QER\Person\UseCentralPassword\PermanentStore</td>
<td>This configuration parameter controls the storage period for central passwords. If the configuration parameter is enabled, the central password is stored in the One Identity Manager database and is used for new users. If the configuration parameter is disabled, the central password is deleted from the One Identity Manager database following publishing to the existing user accounts. The central password is not available for new user accounts.</td>
</tr>
<tr>
<td>TargetSystem\NDO\Accounts\InitialRandomPassword</td>
<td>This configuration parameter specifies whether a random generated password is issued when a new user account is added. The password must contain at least those character sets that are defined in the password policy.</td>
</tr>
<tr>
<td>TargetSystem\NDO\MinPasswordLength</td>
<td>Specifies the minimum password length that is set in all newly calculated Notes ID files.</td>
</tr>
</tbody>
</table>
You have the following possible options for issuing an initial password for a new Notes user account:

- Create user accounts manually and enter a password in their master data.
- Assign a randomly generated initial password to enter when you create user accounts.
  - Enable the **TargetSystem | NDO | Accounts | InitialRandomPassword** configuration parameter in Designer.
  - Apply target system specific password policies and define the character sets that the password must contain.
  - Specify which employee will receive the initial password by email.
- User the employee’s central password. The employee’s central password is mapped to the user account password. For detailed information about an employee’s central password, see *One Identity Manager Identity Management Base Module Administration Guide*.

Related topics

- **Password policies for Notes user accounts** on page 57
- **Email notifications about login data** on page 69

### Email notifications about login data

You can configure the login information for new user accounts to be sent by email to a specified person. In this case, two messages are sent with the user name and the initial password. Mail templates are used to generate the messages. The mail text in a mail template is defined in several languages. which means the recipient’s language can be taken into account when the email is generated. Mail templates are supplied in the default installation with which you can configure the notification procedure.

The following prerequisites must be fulfilled in order to use notifications:

1. Ensure that the email notification system is configured in One Identity Manager. For more detailed information, see the *One Identity Manager Installation Guide*.
2. In Designer, enable the **Common | MailNotification | DefaultSender** configuration parameter and enter the sender address for sending the email notifications.
3. Ensure that all employees have a default email address. Notifications are sent to this address. For more detailed information, see the *One Identity Manager Identity Management Base Module Administration Guide*.
4. Ensure that a language can be determined for all employees. Only then can they receive email notifications in their own language. For more detailed information, see the *One Identity Manager Identity Management Base Module Administration Guide*. 
When a randomly generated password is issued for the new user account, the initial login data for a user account is sent by email to a previously specified person.

**To send initial login data by email**

1. In the Designer, activate the configuration parameter `TargetSystem | NDO | Accounts | InitialRandomPassword`.
2. In the Designer, activate the configuration parameter `TargetSystem | NDO | Accounts | InitialRandomPassword | SendTo` and enter the recipient of the notification as a value.
3. In the Designer, activate the configuration parameter `TargetSystem | NDO | Accounts | InitialRandomPassword | SendTo | MailTemplateAccountName`. By default, the message sent uses the mail template `Employee - new user account created`. The message contains the name of the user account.
4. In the Designer, activate the configuration parameter `TargetSystem | NDO | Accounts | InitialRandomPassword | SendTo | MailTemplatePassword`. By default, the message sent uses the mail template `Employee - initial password for new user account`. The message contains the initial password for the user account.

| TIP: Change the value of the configuration parameter in order to use custom mail templates for these mails.

**Editing a server**

In order to handle IBM Notes specific processes in One Identity Manager, the synchronization server and its server functionality must be declared. You have several options for defining a server’s functionality:

- Create an entry for the Job server in Designer under `Base Data | Installation | Job server`. For detailed information, see *One Identity Manager Configuration Guide*.
- Select an entry for the Job server in the category `Manager | Basic configuration data | Server` in the IBM Notes and edit the Job server master data.
  
  Use this task if the Job server has already been declared in One Identity Manager and you want to configure special functions for the Job server.

| NOTE: One Identity Manager must be installed, configured, and started in order for a server to execute its function in the One Identity Manager Service network. Proceed as described in the *One Identity Manager Installation Guide*. |
To edit a Job server and its functions

1. In Manager, select the category IBM Notes | Basic configuration data | Server.
2. Select the Job server entry in the result list.
3. Select Change master data.
4. Edit the Job server's master data.
5. Select Assign server functions in the task view and specify server functionality.
6. Save the changes.

Detailed information about this topic

- Master data for a Job server on page 71
- Specifying server functions on page 73

### Target system managers

A default application role exists for the target system manager in One Identity Manager. Assign the employees who are authorized to edit all domains in One Identity Manager to this application role.

Define additional application roles if you want to limit the edit permissions for target system managers to individual domains. ns for target system managers to individual farms.SharePoint The application roles must be added under the default application role.

For detailed information about implementing and editing application roles, see the One Identity Manager Authorization and Authentication Guide.

### Implementing application roles for target system managers

1. The One Identity Manager administrator assigns employees to be target system managers.
2. These target system managers add employees to the default application role for target system managers.  
   Target system managers with the default application role are authorized to edit all domains in One Identity Manager.
3. Target system managers can authorize other employees within their area of
responsibility as target system managers and if necessary, create additional child application roles and assign these to individual domains.

Table 24: Default Application Roles for Target System Managers

</tbody>
</table>

**To initially specify employees to be target system administrators**

1. Log in to One Identity Manager as Manager administrator (**Base role | Administrators**)
2. Select One Identity Manager Administration | Target systems | Administrators.
3. Select Assign employees.
4. Assign the employee you want and save the changes.

**To add the first employees to the default application as target system managers.**

1. Log yourself into Manager as target system administrator (**Target systems | Administrators**).
2. Select One Identity Manager Administration | Target systems | IBM Notes.
3. Select Assign employees in the task view.
4. Assign the employees you want and save the changes.
To authorize other employees as target system managers when you are a target system manager

1. Login to Manager as target system manager.
2. Select the application role in IBM Notes | Basic configuration data | Target system managers.
3. Select Assign employees.
4. Assign the employees you want and save the changes.

To specify target system managers for individual domains

1. Log in to Manager as target system manager.
2. Select the category IBM Notes | Domains.
3. Select the domain in the result list.
4. Select Change master data.
5. On the General tab, select the application role in the Target system manager menu.
   - OR -
   Next to the Target system manager menu, click 📊 to create a new application role.
     a. Enter the application role name and assign the Target systems | IBM Notes parent application role.
     b. Click OK to add the new application role.
6. Save the changes.
7. Assign employees to this application role who are permitted to edit the domain in One Identity Manager.

Notes domains

A One Identity Manager domain in IBM Notes corresponds to an image of a specific area in IBM Notes, for example a productive environment. Using this construction, which is far more stringently handled in One Identity Manager than in IBM Notes, it is possible to manage several productive IBM Notes environments in parallel with a One Identity Manager database. Even if a user's relation to their domain is not maintained in IBM Notes, One Identity Manager is capable of assigning the domain to each user account and thus to separate environments.

NOTE: The Synchronization Editor sets up the domains in the One Identity Manager database.

To edit master data for a domain

1. Select the category IBM Notes | Domains.
2. Select the domain in the result list.
3. Select Change master data.
4. Edit the domain's master data.
5. Save the changes.

General master data for a Notes domain

Enter the following data on General:

Table 25: General master data for a Notes domain

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full name</td>
<td>Full domain name.</td>
</tr>
<tr>
<td>Display name</td>
<td>The display name is used to display the domain in the user interface.</td>
</tr>
<tr>
<td>Account</td>
<td>Initial account definition for creating user accounts. This account</td>
</tr>
</tbody>
</table>
## Property Description

**definition (initial)**

Definition is used if automatic assignment of employees to user accounts is used for this domain and if user accounts are to be created that are already managed (Linked configured). The account definition's default manage level is applied.

User accounts are only linked to the employee (Linked) if no account definition is given. This is the case on initial synchronization, for example.

**Target system managers**

Application role in which target system managers are specified for the domain. Target system managers only edit the objects from domains that are assigned to them. Each domain can have different target system managers assigned to it.

Select the One Identity Manager application role whose members are responsible for administration of this domain. Use the button to add a new application role.

**Synchronized by**

Type of synchronization through which data is synchronized between the domain and One Identity Manager. You can no longer change the synchronization type once objects for these domains are present in One Identity Manager.

**One Identity Manager** is used when you create a domain with the Synchronization Editor.

### Table 26: Permitted values

Specifying categories for inheriting Notes groups

In One Identity Manager, groups can be selectively inherited by user accounts. For this purpose, the groups and the user accounts are divided into categories. The categories can be freely selected and are specified using a mapping rule. Each category is given a specific position within the template. The template contains two tables; the user account table and the group table. Use the user account table to specify categories for target system dependent user accounts. In the group table enter your categories for the target system-dependent groups. Each table contains the category positions **Position 1** to **Position 31**.

**To define a category**

1. In Manager, select the domain in **IBM Notes | Domain**.
2. Select **Change master data**.
3. Switch to the **Mapping rule category** tab.
4. Extend the relevant roots of the user account table or group table.
5. Click \(\checkmark\) to enable category.
6. Enter a category name of your choice for user accounts and groups and in the login language used.
7. Save the changes.

**Detailed information about this topic**

- **NotesGroup inheritance based on categories** on page 142

**Editing a synchronization project**

Synchronization projects in which a domain is already used as a base object can also be opened in Manager. You can, for example, check the configuration or view the synchronization log in this mode. The Synchronization Editor is not started with its full functionality. You cannot run certain functions, such as, running synchronization or simulation, starting the target system browser and others.

**NOTE:** Manager is locked for editing throughout. To edit objects in Manager, close the Synchronization Editor.
To open an existing synchronization project in the Synchronization Editor:

1. Select the category IBM Notes | Domains.
2. Select the domain in the result list. Select Change master data.
3. Select Edit synchronization project... from the task view.

Related topics

- Customizing synchronization configuration on page 30
Notes certificates

Certificates are loaded into the One Identity Manager database through synchronization so they can be referenced when new user accounts are added. User accounts that are added with One Identity Manager contain a reference to the certificate in use. This means you can recover their ID files with this certificate at anytime. The certificate is the deciding factor for mapping more user account properties when managing user accounts with account definitions.

You can only synchronize Domino Directory certificates. If a user in the target system has been created with an external certificate, One Identity Manager cannot determine the certificate and therefore cannot allocate it to the user account.

To edit a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list. Select Change master data.
3. Enter the required data on the master data form.
4. Save the changes.

Additional tasks for managing Notes certificates

After you have entered the master data, you can run the following tasks.

Overview of the Notes certificate

To obtain an overview of a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Notes certificate overview.

Assigning owners

Specify which user accounts and groups are entered as certificate document owners.

To specify user accounts as owners of a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign owner in the task view.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.
To specify groups as owners of a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign owner in the task view.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assign administrators

Specify which user accounts and groups are allowed to administrate the certificate document.

To specify user accounts as administrators for a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign administrators in the task view.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as administrators for a certificate

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign administrators in the task view.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.
Post-processing newly loaded certificates

To add new users with One Identity Manager or to recertify existing users, copy the new certificate regularly in the synchronization user’s personal address book.

To use new certificates for registering user accounts

1. Copy the certificates from the Domino Directory in the synchronization user’s personal address book.
   For more information, see Copying the Notes certificates on page 18.
2. Check whether the certificate ID files are reachable from the gateway server.
3. Enter the name and path of the certificate ID file on the gateway server in the certificate’s master data in One Identity Manager. This data is only required for certificates that are not used by the CA process.
   For more information, see General master data for Notes certificates on page 82.

Notes certificate requests

Certificate requests are mapped in One Identity Manager for all documents that were certified using the CA process. All certificate requests for a certificate are displayed on the certificate’s overview form.

To display a certificate request’s properties

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list. Select Notes certificate overview.
3. Select a certificate request on the element certificate requestsNotes.
4. Select Change master data.

Table 29: Notes certificate request master data

</tr>
</tbody>
</table>
Notes templates

To allow the IBM Notes connector to add users in the target system, you must add a template to the user account specifying which template to use when the user's mailbox is created. You will find Notes templates in One Identity Manager for this purpose.

To edit a template's master data

1. Select the IBM Notes | Notes Templates category.
2. Select the template in the result list. Select Change master data.
3. Enter the required data on the master data form.
4. Save the changes.

Table 30: Notes template master data

Notes policies

You can use policies to specify settings to apply to Notes users and groups. Policies and policy settings can be loaded into the One Identity Manager database and assigned to user accounts by synchronization. The policies can be assigned to user accounts and groups as members, owners, or administrators.

**To display policy master data**

1. Select IBM Notes | Policies.
2. Select the policy in the result list. Select Change master data.

**Table 31: Notes policy master data**

<table>

Additional tasks for managing Notes policies

After you have entered the master data, you can run the following tasks.

Overview of the Notes policy

To obtain an overview of a policy
1. Select IBM Notes | Policies.
2. Select the policy in the result list.
3. Select Notes policy overview.

Assigning members to a Notes policy

Assign the user accounts and groups to which the policy will apply.

To assign user accounts to a policy
1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign members.
4. Select "Notes user accounts" in Table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To assign groups to a policy
1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign members.
4. Select "Notes groups" in Table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assigning owners to a Notes policy

You can define owner relations for policies. To do this, specify which user accounts and groups are permitted to edit the policy.

**To specify user accounts as owner**

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign owner in the task view.
4. Select "Notes user accounts" in Table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

**To specify groups as owner**

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign owner in the task view.
4. Select "Notes groups" in Table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assigning administrators to a Notes policy

You can define administrator relations for policies. To do this, specify which user accounts and groups are permitted to manage the policy.
To specify user accounts as administrators

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign administrators in the task view.
4. Select "Notes user accounts" in Table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as administrators

1. Select IBM Notes | Certificates.
2. Select a certificate in the result list.
3. Select Assign administrators in the task view.
4. Select "Notes groups" in Table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Notes policy settings

The policy settings mapped in One Identity Manager are those used in synchronized Notes policies.

To display policy settings master data

1. Select IBM Notes | Policies.
2. Select a policy in the result list. Select Change master data.
3. Select an assigned policy setting and open the context menu.
4. Click Go to assigned object.
5. Select Change master data.
Table 32: Master data of a Notes policy setting

- [Notes policies](#) on page 88
Notes User accounts

Use the One Identity Manager to manage users and employee documents in IBM Notes. These are mapped in the One Identity Manager database as Notes user accounts. All user accounts known to the Domino Directory are mapped. Users obtain access to network resources through membership in groups and through assigned policies.

When a user is added, the user ID file for authentication, the mailbox file and the user’s personal address book are added. The mailbox file is created on the given mail server, the ID file and the personal address book are created on the gateway server.

If no certificate is assigned when a new user account is added in One Identity Manager, only the employee document is created in the target system. No user ID file, mailbox file nor personal address book is created.

Detailed information about this topic

- Linking user accounts to employees on page 93
- Supported user account types on page 94
- Entering Notes user account master data on page 98

Linking user accounts to employees

The central component of the One Identity Manager is to map employees and their master data with permissions through which they have control over different target systems. For this purpose, information about user accounts and permissions can be read from the target system into the One Identity Manager database and linked to employees. This gives an overview of the permissions for each employees in all of the connected target systems. One Identity Manager provides the possibility to manage user accounts and their permissions. You can provision modifications in the target systems. Employees are supplied with the necessary permissions in the connected target systems according to their function in the company. Regular synchronization keeps data consistent between target systems and the One Identity Manager database.

Because requirements vary between companies, the One Identity Manager offers different methods for supplying user accounts to employees. One Identity Manager supports the following method for linking employees and their user accounts.
Employees can automatically obtain their account definitions using user account resources. If an employee does not yet have a user account in an Notes domain, a new user account is created. This is done by assigning account definitions to an employee using the integrated inheritance mechanism and subsequent process handling.

Employee documents can also be created through account definitions. When you manage account definitions through user accounts, you can specify the way user accounts behave when employees are enabled or deleted.

When user accounts are inserted, they can be automatically assigned to an existing employee or a new employee can be created if necessary. In the process, the employee master data is created on the basis of existing user account master data. This mechanism can be implemented if a new user account is created manually or by synchronization. However, this is not the One Identity Manager default method. Define criteria for finding employees for automatic employee assignment.

Employees and user accounts can be entered manually and assigned to each other.

Related topics

- Entering Notes user account master data on page 98
- Setting up account definitions on page 40
- Automatic assignment of employees to user accounts on page 116
- For more detailed information about employee handling and administration, see the One Identity Manager Target System Base Module Administration Guide.

Supported user account types

Different types of user accounts, such as default user accounts, administrative user accounts, service accounts, or privileged user accounts can be mapped in One Identity Manager.

The following properties are used for mapping different user account types.

- Identity
  
  The Identity property (IdentityType column) is used to describe the type of user account.
Table 33: Identities of user accounts

<table>
<thead>
<tr>
<th>Identity</th>
<th>Description</th>
<th>Value of the IdentityType column</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary identity</td>
<td>Employee’s default user account.</td>
<td>Primary</td>
</tr>
<tr>
<td>Organizational identity</td>
<td>Secondary user account used for different roles in the organization, for example for subcontracts with other functional areas.</td>
<td>Organizational</td>
</tr>
<tr>
<td>Personalized admin identity</td>
<td>User account with administrative permissions, used by one employee.</td>
<td>Admin</td>
</tr>
<tr>
<td>Sponsored identity</td>
<td>User account that is used for training purposes, for example.</td>
<td>Sponsored</td>
</tr>
<tr>
<td>Shared identity</td>
<td>User account with administrative permissions, used by several employees.</td>
<td>Shared</td>
</tr>
<tr>
<td>Service identity</td>
<td>Service account.</td>
<td>Service</td>
</tr>
</tbody>
</table>

**NOTE:** To enable working with identities for user accounts, the employees also need identities. You can only link user accounts to which an identity is assigned with employees who have this same identity.

The primary identity, the organizational identity, and the personal admin identity are used for different user accounts, which can be used by the same actual employee to execute their different tasks within the company.

To provide user accounts with a personal admin identity or an organizational identity for an employee, you create subidentities for the employee. These subidentities are then linked to user accounts, enabling you to assign the required Entitlements to the different user accounts.

User accounts with a sponsored identity, group identity, or service identity are linked to dummy employees that do not refer to a real person. These dummy employees are needed so that Entitlements can be inherited by the user accounts. When evaluating reports, attestations, or compliance checks, check whether dummy employees need to be considered separately.

For detailed information about mapping employee identities, see the One Identity Manager Identity Management Base Module Administration Guide.

- Privileged user account

Privileged user accounts are used to provide employees with additional privileges. This includes administrative user accounts or service accounts, for example. The user accounts are marked as **Privileged user account** (Column IsPrivilegedAccount).
Default User Accounts

Normally, each employee obtains a default user account, which has the permissions they require for their regular work. The user accounts are linked to the employee. The effect of the link and the scope of the employee’s inherited properties on the user accounts can be configured through an account definition and its manage levels.

To create default user accounts through account definitions

1. Create an account definition and assign the Unmanaged and Full managed manage levels.
2. Specify the effect of temporarily or permanently disabling, deleting or the security risk of an employee on its user accounts and group memberships for each manage level.
3. Create a formatting rule for IT operating data.
   You use the mapping rule to define which rules are used to map the IT operating data for the user accounts, and which default values are used if no IT operating data can be determined via a person's primary roles.
   Which IT operating data is required depends on the target system. The following setting are recommended for default user accounts:
   - In the mapping rule for the IsGroupAccount column, use the default value 1 and enable Always use default value.
   - In the mapping rule for the IdentityType column, use the default value Primary and enable Always use default value.
4. Enter the effective IT operating data for the target system. Select the concrete target system under Effects on.
   Specify in the departments, cost centers, locations, or business roles which IT operating data should apply when you set up a user account.
5. Assign the account definition to employees.
   When the account definition is assigned to an employee, a new user account is created through the inheritance mechanism and subsequent processing.

Administrative User Accounts

An administrative user account must be used for certain administrative tasks. Administrative user accounts are usually predefined by the target system and have fixed names and login names, such as Administrator.

Administrative user accounts are imported into One Identity Manager during synchronization.

NOTE: Some administrative user accounts can be automatically identified as privileged user accounts. To do this, enable the Mark selected user accounts as privileged schedule in Designer.

You can label administrative user accounts as a Personalized administrator identity or as a Shared identity. Proceed as follows to provide the employees who use this user account with the required permissions.
Personalized admin identity

1. Use the UID_Person column to link the user account with an employee.
   Use an employee with the same identity or create a new employee.
2. Assign this employee to hierarchical roles.

Shared identity

1. Assign all employees with usage authorization to the user account.
2. Link the user account to a dummy employee using the UID_Person column.
   Use an employee with the same identity or create a new employee.
3. Assign this dummy employee to hierarchical roles.

The dummy employee provides the user account with its permissions.

Privileged User Accounts

Privileged user accounts are used to provide employees with additional privileges. This includes administrative user accounts or service accounts, for example. The user accounts are marked as **Privileged user account** (Column IsPrivilegedAccount).

**NOTE:** The criteria according to which user accounts are automatically identified as privileged are defined as extensions to the view definition (ViewAddOn) in the TSBVAccountIsPrivDetectRule table (which is a table of the Union type). The evaluation is done in the script TSB_SetIsPrivilegedAccount.

To create privileged users through account definitions

1. Create an account definition. Create a new manage level for privileged user accounts and assign this manage level to the account definition.
2. If you want to prevent the properties for privileged user accounts from being overwritten, set the **IT operating data overwrites** property for the manage level to **Only initially**. In this case, the properties are populated just once when the user accounts is created.
3. Specify the effect of temporarily or permanently disabling or deleting, or the security risk of an employee on its user accounts and group memberships for each manage level.
4. Create a formatting rule for IT operating data.
   You use the mapping rule to define which rules are used to map the IT operating data for the user accounts, and which default values are used if no IT operating data can be determined via a person's primary roles.
   Which IT operating data is required depends on the target system. The following settings are recommended for privileged user accounts:
   - In the mapping rule for the IsPrivilegedAccount column, use the default value **1** and enable **Always use default value**.
   - You can also specify a mapping rule for the IdentityType column. The column owns different permitted values that represent user accounts.
• To prevent privileged user accounts from inheriting the entitlements of the default user, define a mapping rule for the IsGroupAccount column with a default value of 0 and enable **Always use default value**.

5. Enter the effective IT operating data for the target system.
   Specify in the departments, cost centers, locations, or business roles which IT operating data should apply when you set up a user account.

6. Assign the account definition directly to employees who work with privileged user accounts.
   When the account definition is assigned to an employee, a new user account is created through the inheritance mechanism and subsequent processing.

| TIP: | If customization requires that the login names of privileged user accounts follow a defined naming convention, create the template according to which the login names are formed. |

## Entering Notes user account master data

A user account can be linked to an employee in One Identity Manager. You can also manage user accounts separately from employees.

| NOTE: | It is recommended to use account definitions to set up user accounts for company employees. In this case, some of the master data described in the following is mapped through templates from employee master data. |

| NOTE: | If employees are to obtain their user accounts through account definitions, the employees must own a central user account and obtain their IT operating data through assignment to a primary department, a primary location or a primary cost center. |

### To create a user account

1. In Manager, select **IBM Notes | User accounts**.
2. Click 🎯 in the result list.
3. On the master data form, edit the master data for the user account.
4. Save the changes.

### To edit master data for a user account

1. In Manager, select **IBM Notes | User accounts**.
2. Select the user account in the result list and run **Change master data**.
3. Edit the user account's resource data.
4. Save the changes.
To manually assign or create a user account for an employee

1. Select the Employees | Employees.
2. Select the employee in the result list and run Assign Notes user accounts from the task view.
3. Assign a user account.
4. Save the changes.

<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| Account definition| Account definition through which the user account was created. Use the account definition to automatically fill user account master data and to specify a manage level for the user account. The One Identity Manager finds the IT operating data of the assigned employee and enters it in the corresponding fields in the user account.  

**NOTE:** The account definition cannot be changed once the user account has been saved.  

Employee documents can also be created through account definitions. |
| Manage level      | Manage level of the user account. Select a manage level from the menu. You can only specify the manage level can if you have also entered an account definition. All manage levels of the selected account definition are available in the menu. |
| First name        | The user’s first name.                                                                                                                      |
| Middle name       | User's middle name.                                                                                                                        |
| Last name         | The user’s last name.                                                                                                                       |
| Short name        | The user’s short name.                                                                                                                      |
| Phonetic name     | The user's name in phonetic letters.                                                                                                        |
| Notes domain      | User account's user account.                                                                                                                |
| Certificate       | Certificate with which the user ID file and the user's mailbox file will be registered (when first added) or were registered. If you have assigned an account definition, the input field is automatically filled out with respect to the manage level. No certificate is assigned to pure employee documents.  

If a certificate is not assigned when a new user account is saved, the certificate cannot be assigned later.  

If a certificate is assigned when a new user account is saved, the certificate cannot be removed later. |

Detailed information about this topic

- Generating mailbox files on page 120

Notes user account address data

Enter the address and telephone information for contacting the employee that uses this user account on the Company and Private tabs. Enter other known data for describing the employee in more detail. This data is copied from the employee’s master data depending on the manage level of the user account.

Additional master data for Notes user accounts

Enter the additional data for a user account on the Miscellaneous tab. This data is mainly for the mailbox file and message forwarding. You can find the size of a user account’s mailbox on regular basis using a scheduled process plan. Prerequisite for this is that you enter the correct mail server data and the mailbox file path on the General tab.

To find out the size of the user account’s mailbox file

- Configure and enable in Designer the users schedule.
- Load IBM Notes mail file sizes for NOTES

For more detailed information about configuring schedules, see the One Identity Manager Operational Guide.

### Additional tasks for managing Notes user accounts

After you have entered the master data, you can run the following tasks.

### Overview of Notes user accounts

**To obtain an overview of a user account**
1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Notes user account overview**.
Changing the manage level of a user account

The default manage level is applied if you create user accounts using automatic employee assignment. You can change a user account manage level later.

To change the manage level for a user account

1. In Manager, select IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Change master data.
4. On the General tab, select the manage level in the Manage level menu.
5. Save the changes.

Related topics

- General master data of a Notes user account on page 99

Assigning Notes groups directly to Notes user accounts

Groups can be assigned directly or indirectly to a user account. Indirect assignment is carried out by allocating the employee and groups in hierarchical roles, such as departments, cost centers, locations, or business roles. If the employee has a Notes user account, groups in the hierarchical roles are inherited by this user account.

To react quickly to special requests, you can assign groups directly to the user account.

To assign groups directly to user accounts

1. In Manager, select IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Assign groups.
4. Assign groups in Add assignments. To filter the groups, select a domain in the Notes Domains input field.
5. Save the changes.

User accounts cannot be manually added to dynamic groups. You can assign user accounts additionally to dynamic groups using the additional list.

TIP: you can remove the assignment of groups in the Remove assignments area.

To remove an assignment

- Select the group and double click .

5. Save the changes.
Related topics

- Assigning Notes groups to Notes user accounts on page 131
- Maintaining excluded and additional lists on page 114
- Memberships in dynamic groups on page 151

Specifying document owners

Specify in which documents to enter the user account as owner. You can only assign documents belonging to the same domain as the user account.

To specify an owner for user accounts

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
4. Select the User tab.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify an owner for groups

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
4. Select the Group tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

To specify an owner for mail-in databases

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
4. Select the Mail-in DB tab.
5. Assign mail-in databases in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the mail-in DBs.
6. Save the changes.

**To specify an owner for certificates**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign document owner**.
4. Select the **Certificate** tab.
5. Assign certificates in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the certificates.
6. Save the changes.

**To specify an owner for server documents**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign document owner**.
4. Select the **Server document** tab.
5. Assign the server documents in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the server documents.
6. Save the changes.

### Assigning owners

Specify which user accounts and groups are allowed to edit the selected user account.

**To specify user accounts as owner**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign owner** in the task view.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**.
   - OR -
Remove user accounts from Remove assignments.

6. Save the changes.

To specify groups as owner

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Assign owner in the task view.
4. Select the Group tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assigning administrative documents

Specify which documents the user account should administrate. You can only assign documents belonging to the same domain as the user account.

To specify the user account administrator

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Assign administrable documents.
4. Select the User tab.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify an administrator for groups

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Assign administrable documents.
4. Select the Group tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.
**To specify an administrator for mail-in databases**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrable documents**.
4. Select the **Mail-in DB** tab.
5. Assign mail-in databases in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the mail-in DBs.
6. Save the changes.

**To specify an administrator for certificates**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrable documents**.
4. Select the **Certificate** tab.
5. Assign certificates in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the certificates.
6. Save the changes.

**To specify an administrator for servers**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrable documents**.
4. Select the **Server** tab.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**To specify an administrator for server documents**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrable documents**.
4. Select the **Server document** tab.
5. Assign the server documents in **Add assignments**.
   - OR -
In **Remove assignments**, remove the server documents.

6. Save the changes.

**Assign administrators**

Specify which user accounts and groups are allowed to administrate the selected user account.

**To specify user accounts as administrators**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrators** in the task view.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**.
   - OR -
   
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To specify groups as administrators**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign administrators** in the task view.
4. Select the **Groups** tab.
5. Assign groups in **Add assignments**.
   - OR -
   
   Remove groups from **Remove assignments**.
6. Save the changes.

**Maintaining excluded and additional lists**

Use this task to add the user account to additional and excluded lists for dynamic groups.

**To add a user account to a dynamic group’s additional list**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Maintain excluded and additional**
4. Select the **Additional** tab.
5. Assign the groups in whose additional list the user account is to be a member in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To add a user account to a dynamic group’s excluded list**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Maintain excluded and additional**
4. Select the **Excluded** tab.
5. Assign the groups in whose excluded list the user account is to be a member in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**Related topics**

- Memberships in dynamic groups on page 151

**Assigning extended properties**

Extended properties are meta objects that cannot be mapped directly in One Identity Manager, for example, operating codes, cost codes or cost accounting areas.

**To specify extended properties for a user account**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **Assign extended properties**.
4. Assign extended properties in **Add assignments**.
   - OR -
   Remove extended properties from **Remove assignments**.
5. Save the changes.

For more detailed information about setting up extended properties, see the One Identity Manager Identity Management Base Module Administration Guide.
Automatic assignment of employees to user accounts

Table 40: Configuration parameters for synchronizing a Notes domain

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\PersonAutoFullsync</td>
<td>This configuration parameter specifies the mode for automatic employee assignment for user accounts added to or updated in the database through synchronization.</td>
</tr>
<tr>
<td>TargetSystem\NDO\PersonAutoDefault</td>
<td>This configuration parameter specifies the mode for automatic employee assignment for user accounts added to the database outside synchronization.</td>
</tr>
<tr>
<td>TargetSystem\NDO\PersonExcludeList</td>
<td>List of all user accounts for which automatic employee assignment should not take place. Names are listed in a pipe (</td>
</tr>
<tr>
<td>TargetSystem\NDO\PersonAutoDisabledAccounts</td>
<td>This configuration parameters specifies whether employees are automatically assigned to locked user accounts. User accounts do not obtain an account definition.</td>
</tr>
</tbody>
</table>

When you add a user account, an existing employee can be assigned automatically or added if necessary. In the process, the employee master data is created on the basis of existing user account master data. This mechanism can follow on after a new user account has been created manually or through synchronization. Define criteria for finding employees to apply to automatic employee assignment. If a user account is linked to an employee through the current mode, the user account is given, through an internal process, the default manage level of the account definition entered in the user account’s target system. You can customize user account properties depending on how the behavior of the manage level is defined.

If you run this procedure during working hours, automatic assignment of employees to user accounts takes place from that moment onwards. If you disable the procedure again later, the changes only affect user accounts added or updated after this point in time. Existing employee assignment to user accounts remain intact.

**NOTE:** It is not recommended to assign employees using automatic employee assignment in the case of administrative user accounts. Use Change master data to assign employees to administrative user account for the respective user account.

Run the following tasks to assign employees automatically.

- If employees can be assigned by user accounts during synchronization, set "TargetSystem\NDO\PersonAutoFullsync" in the Designer and select the required mode.
• If employees can be assigned by user accounts outside synchronization, set "TargetSystem\NDO\PersonAutoDefault" in the Designer and select the required mode.

• Specify the user accounts in the configuration parameter "TargetSystem\NDO\PersonExcludeList" which must not be assigned automatically to employees.
  
  Example:
  
  ADMINISTRATOR

• Use "TargetSystem\NDO\PersonAutoDisabledAccounts" to specify whether employees can be automatically assigned to locked user accounts. User accounts do not obtain an account definition.

• Assign an account definition to the domain. Ensure that the manage level to be used is entered as the default manage level.

• Define the search criteria for employees assigned to the domain.

**NOTE:**

The following applies for synchronization:

• Automatic employee assignment takes effect if user accounts are added or updated.

The following applies outside synchronization:

• Automatic employee assignment takes effect if user accounts are added.

**NOTE:**

Following a synchronization, employees are automatically created for the user accounts in the default installation. If an account definition for the domain is not yet known at the time of synchronization, user accounts are linked with employees. However, account definitions are not assigned. The user accounts are therefore in a **Linked** state.

To manage the user accounts using account definitions, assign an account definition and a manage level to these user accounts.

**To select user accounts through account definitions**

1. Create an account definition.

2. Assign an account definition to the domain.

3. Assign the account definition and manage level to user accounts in **linked** status.
   
   a. In Manager, select **IBM Notes | User accounts | Linked but not configured | <Domain>**.
   
   b. Select **Assign account definition to linked accounts**.

For more detailed information about assigning employees automatically, see the One Identity Manager Target System Base Module Administration Guide.
Related topics

- Assigning account definitions to a target system on page 55
- Editing search criteria for automatic employee assignment on page 118

**Editing search criteria for automatic employee assignment**

The criteria for employee assignment are defined for the domain. In this case, you specify which user account properties must match the employee’s properties such that the employee can be assigned to the user account. You can limit search criteria further by using format definitions. The search criterion is written in XML notation to the **Search criteria for automatic employee assignment** column (AccountToPersonMatchingRule) in the NDODomain table.

Search criteria are evaluated when employees are automatically assigned to user accounts. Furthermore, you can create a suggestion list for assignments of employees to user accounts based on the search criteria and make the assignment directly.

![NOTE:](image) When the employees are assigned to user accounts on the basis of search criteria, user accounts are given the default manage level of the account definition entered in the user account’s target system. You can customize user account properties depending on how the behavior of the manage level is defined.

It is not recommended to make assignment to administrative user accounts based on search criteria. Use **Change master data** to assign employees to administrative user account for the respective user account.

![NOTE:](image) One Identity Manager supplies a default mapping for employee assignment. Only carry out the following steps when you want to customize the default mapping.

**To define employee assignment criteria for a Notes domain**

1. Select the category **IBM Notes | Domains**.
2. Select the domain in the result list.
3. Select **Define search criteria for employee assignment** in the task view.
4. Specify which user account properties must match with which employee so that the employee is linked to the user account.

<table>
<thead>
<tr>
<th>Apply to</th>
<th>Column for employee</th>
<th>Column for user account</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notes User</td>
<td>First name (FirstName) AND</td>
<td>First name (FirstName) AND</td>
</tr>
</tbody>
</table>

*Table 41: Standard search criteria for user accounts*
Apply to | Column for employee | Column for user account
---|---|---
accounts | last name (LastName) | last name (LastName)
Enabled Notes user accounts | First name (FirstName) AND last name (LastName) | First name (FirstName) AND last name (LastName)

5. Save the changes.

Direct assignment of employees to user accounts based on a suggestion list

In Assignments, you can create a suggestion list for assignments of employees to user accounts based on the search criteria and make the assignment directly. User accounts are grouped in different views for this.

Table 42: Manual Assignment View

<table>
<thead>
<tr>
<th>View</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Suggested assignments</td>
<td>This view lists all user accounts to which One Identity Manager can assign an employee. All employees are shown who were found using the search criteria and can be assigned.</td>
</tr>
<tr>
<td>Assigned user accounts</td>
<td>This view lists all user accounts to which an employee is assigned.</td>
</tr>
<tr>
<td>Without employee assignment</td>
<td>This view lists all user accounts to which no employee is assigned and for which no employee was found using the search criteria.</td>
</tr>
</tbody>
</table>

| TIP: By double-clicking on an entry in the view, you can view the user account and employee master data. |

To apply search criteria to user accounts

- Click **Reload**.
  
  All possible assignments based on the search criteria are found in the target system for all user accounts. The three views are updated.

To assign employees directly over a suggestion list

1. Click **Suggested assignments**.
   a. Click **Select** for all user accounts to which you want to assign the suggested employees. Multi-select is possible.
   b. Click **Assign selected**.
c. Confirm the security prompt with Yes.

The employees determined using the search criteria are assigned to the selected user accounts.

– OR –

2. Click **No employee assignment**.
   a. Click **Select employee** for the user account to which you want to assign an employee. Select an employee from the menu.
   b. Click **Select** for all user accounts to which you want to assign the selected employees. Multi-select is possible.
   c. Click **Assign selected**.
   d. Confirm the security prompt with Yes.

The employees displayed in the **Employee** column are assigned to the selected user accounts.

**To remove assignments**

1. Click **Assigned user accounts**.
   a. Click **Select** for all user accounts for which you want to delete the employee assignment. Multi-select is possible.
   b. Click **Remove selected**.
   c. Confirm the security prompt with Yes.

The assigned employees are removed from the selected user accounts.

For more detailed information about defining search criteria, see the One Identity Manager Target System Base Module Administration Guide.

**Related topics**

- Automatic assignment of employees to user accounts on page 116

**Generating mailbox files**

**Table 43: Configuration parameters for creating a mailbox file**

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\CreateMailDB</td>
<td>This configuration parameter specifies whether the mailbox is created after or while the Notes user is registering with the target system. If the configuration parameter is set, the mailbox is created during registration. This uses the template of the Notes server on which the user is registered.</td>
</tr>
<tr>
<td>Configuration parameter</td>
<td>Effect when set</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td>TargetSystem\NDO\DefTemplatePath</td>
<td>Template for adding the mailbox on a Notes server.</td>
</tr>
<tr>
<td>TargetSystem\NDO\MailFilePath</td>
<td>Directory on the mail server, in which the user account’s mailbox files are stored.</td>
</tr>
</tbody>
</table>

If and in what way mailboxes are created in IBM Notes depends on the user account data and the configuration parameter settings. The mailbox path and file name must be supplied with the user account in order to create a mailbox. If this information is missing, the mailbox file cannot be created.

**"TargetSystem\NDO\CreateMailDB" is not set (default)**

By default, the mailbox file is created after the Notes user has registered with the target system. This uses a template given in the user account. If there is no template given in the user account, the mailbox file cannot be created.

**"TargetSystem\NDO\CreateMailDB" is set.**

If it is necessary to create the mailbox during the Notes user's registration, set "TargetSystem\NDO\CreateMailDB". In this case, the template of the Notes server's on which the user is registered is used.

**NOTE:** The One Identity Manager Service does not access to mailboxes created like this. Different actions, for example, loading mailbox sizes, are therefore not possible. Only set this configuration parameter to prevent the IBM Notes connector from accessing the mailboxes.

**Related topics**

Saving user ID files

Table 44: Configuration parameters for creating a mailbox file

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\StoreIDInAddressbook</td>
<td>This configuration parameter control the behavior of ID files for new user accounts. If the configuration parameter is set, the ID files are attached to the employee document. If this configuration parameter is no set, the ID file is stored on the gateway server.</td>
</tr>
</tbody>
</table>

The IBM Notes connector requires the information about where the ID files for the new user accounts should be stored in the IBM Notes environment. User ID files can be added to the employee document as an attachment or stored on the gateway server. Set the desired behavior in "TargetSystem\NDO\StoreIDInAddressbook". Enter the path for saving the User ID files if they are going to be stored on the gateway server.

By default, the IBM Notes connector uses the path stored in the domain. If a default path is not given, you can add the path to the user accounts' mail servers.

**NOTE:** If there is no path given either in the domain or the mail server, use the default IBM Notes connector path, which is stored with the variable UserIDFilesDefaultPath in the synchronization project. If you want to change the variable value, customize the synchronization configuration. For more detailed information about variables and variable sets, see the One Identity Manager Target System Synchronization Reference Guide.

To specify the user ID file location on the gateway server

1. Disable the configuration parameter "TargetSystem\NDO\StoreIDInAddressbook" in the Designer.
2. Edit the domain's master data in the Manager and enter the user ID files path.

Restoring user ID files

If a user has forgotten the password to a user account and lost the user ID file, the user ID file can be restored. Since IBM Domino version 8.5, IBM Notes provides the ID vault function to do this.

The One Identity Manager uses "ID Restore" to provide its own method for restoring the user ID files. This can be used if an older version of IBM Domino is in use or if ID Vault should not be used.

**NOTE:** The method to be used for restoring user ID files is specified by the domain. This option is valid for all user accounts in the domain!

ID vault

The ID Vault is an IBM Domino database that stores copies of user ID files. This allows IBM Notes to be able to restore user ID files and to reset user account passwords. The One Identity Manager provides a process for resetting the passwords in the ID vault.

Prerequisites

- The Domino server, which communicates with the gateway server, is also the ID vault server.
- There are executing permissions defined for agents for the synchronization user account. For more information, see Running restricted LotusScript/Java-agents on page 180.
- ID vault database permissions for the synchronization user account are set: access function "Manager" and role "Auditor". For more detailed information, see your IBM Notes documentation.
- Permissions for restoring passwords of the synchronization administrative user account and the ID vault server are set. For more detailed information, see your IBM Notes documentation.

To use the ID vault

1. Select the category IBM Notes | Domains.
2. Select the domain you want to use for the ID vault in the result list and run Change master data in the task view.
3. Set the option ID vault enabled.
   - This setting effects all user accounts in the domain.
4. Save the changes.
NOTE: If certain user accounts are excluded from the ID vault by the ID vault policy in IBM Notes, the password cannot be reset by One Identity Manager. In order to ensure the passwords for all user accounts in a domain can be reset, assign a policy for ID Vault that cover the whole organization.

When a new user account is published in the IBM Notes environment, the One Identity Manager saves the initial password in the One Identity Manager database (NDOUser.PasswordInitial). This initial password is used when a user account password needs to be reset. Passwords are saved automatically for user accounts that are initially setup in the One Identity Manager. The initial password for all other user accounts has to be transferred to the One Identity Manager database by a customized process.

To reset a user account password

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select ID restore in the task view.

This task starts the process NDO_NDOUser_PWReset_from_Vault. This process replaces the password from the user ID file saved in the ID Vault with the initial password from the One Identity Manager database. If the user is logged into the IBM Notes client at this point, the user’s local ID file is replaced with the update copy from the ID Vault. The user has to login with the initial password when the IBM Notes client is started the next time. If the user is not logged into the IBM Notes client when the password is reset, the updated ID file must be provided separately.

Once the password has been successfully reset, the user must be provided with initial password and the ID file if necessary. This process has to be customized to meet your needs.

ID Restore

ID restore is a One Identity Manager mechanism that can be used when a user has forgotten his password or the ID file itself has been lost. If the user ID file is restored with the ID restore procedure, the full name of the user account and the display name are determined from the user account name, organizational unit and certificate.

The following information is required to run an ID restore:

- An ID file that is initially imported into the database including the associated password (NotesUser.NotesID, NotesUser.PasswordInitial)
- The certifier that the initial ID file was created with (NotesUser.UID_NotesCertifierInitial)
- A copy of the initially loaded or added employee document in the gateway server’s archive database archiv.nsf
- The GUID of the document copy in the archive database (NotesUser.ObjectGUID_Archiv)
This data is automatically generated and saved for the user accounts that were added in the One Identity Manager. A one-off custom import of the files mentioned above has to be run for all other user accounts.

**To restore the user ID file**

1. Select the category **IBM Notes | User accounts**.
2. Select the user account in the result list.
3. Select **ID restore** in the task view.

   The ID restore process carries out the following steps:
   - Deletes all current employee documents from the Domino directory.
   - Copies initial employee documents from archive database to the Domino directory.
   - Exports the initially saved ID files to the gateway server.
   - Starts the AdminP request to track the changes made to the original ID up until now. This includes changes to the components of the user’s name, changes to the ID expiry date and exchanging certifiers.
   - Update the restored employee document using the known values.
4. If the ID file is restored, provide the user with the ID file and the initial password.

## Locking and unlocking Notes user accounts

**Table 45: Configuration parameters for locking/unlocking user accounts**

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\MailBoxAnonymPrefix</td>
<td>Prefix for user account anonymity.</td>
</tr>
<tr>
<td>QER\Person\TemporaryDeactivation</td>
<td>This configuration parameter specifies whether user accounts for an employee are locked if the employee is temporarily or permanently disabled.</td>
</tr>
</tbody>
</table>

A user is considered to be locked in IBM Notes if it is no longer possible for the user to log on to a server in the domain with this user account. The user loses access to the mailbox file through this. Access to a server can be prevented if the user account has the permissions type "Not access server" for the corresponding server document. This is very
complicated in environments with several servers because a user account, which is going to be locked, must be given this permissions type for every server document.

For this reason, denied access groups are used. Each denied access group initially gets the permissions type "Not access server" for each server document. A user that is going to be locked becomes a member of the denied access group and therefore is automatically prevented from accessing the domain servers.

The way you lock user accounts depends on how they are managed.

**Scenario:**
- The user account is linked to employees and is managed through account definitions.

User accounts managed through account definitions are locked when the employee is temporarily or permanently disabled. The behavior depends on the user account manage level. Accounts with the manage level Full managed manage level are disabled depending on the account definition settings. For user accounts with a manage level, configure the required behavior using the template in the NDUser.AccountDisabled

**Scenario:**
- The user accounts are linked to employees. No account definition is applied.

User accounts managed through user account definitions are locked when the employee is temporarily or permanently disabled. The behavior depends on the QER | Person | TemporaryDeactivation configuration parameter
  - If the configuration parameter is set, the employee’s user accounts are locked if the employee is permanently or temporarily disabled.
  - If the configuration parameter is not set, the employee’s properties do not have any effect on the associated user accounts.

**To lock the user account when the configuration parameter is disabled.**
1. In Manager, select IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Change master data.
4. Enable Account is disabled on the General tab.
5. Save the changes.

**Scenario:**
- User accounts not linked to employees.

**To lock a user account that is no longer linked to an employee.**
1. In Manager, select IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Change master data.
4. Enable Account is disabled on the General tab.
5. Save the changes.

The user account becomes anonymous when it is locked and is not shown in address books. Access to Notes servers is removed. "TargetSystem\NDO\MailBoxAnonymPre" is checked if the user is made anonymous.

To unlock a user account
1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Select Change master data.
4. Disable Account is disabled on the General tab.
5. Save the changes.
   Anonymity is rescinded and the user account removed from denied access groups.

Detailed information about this topic
- Locking groups on page 149

Related topics

Deleting and restoring Notes user accounts

If a user account is deleted in One Identity Manager, it is initially marked for deletion. The user account is therefore locked. Depending on the deferred deletion setting, the user account is either deleted immediately from the address books and One Identity Manager database or at a later date.

NOTE: As long as an account definition for an employee is valid, the employee retains the user account that was created by it. If the assignment of an account definition is removed, the user account that was created from this account definition is deleted.

To delete a user account
1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Click to delete the user account.
4. Confirm the security prompt with Yes.
To restore a user account

1. Select the category IBM Notes | User accounts.
2. Select the user account in the result list.
3. Click in the result list toolbar.

Configuring deferred deletion

By default, user accounts are finally deleted from the database after 30 days. The user accounts are initially disabled. You can reenable the user accounts until deferred deletion is run. After deferred deletion is run, the user account are deleted from the database and cannot be restored anymore. You can configure an alternative deletion delay on the table NDOUser in the Designer.

**Detailed information about this topic**

- Extension groups on page 151
- Specifying categories for inheriting Notes groups on page 80
- Dynamic groups on page 150
- Locking groups on page 149

**Assigning Notes groups to Notes user accounts**

Groups can be assigned directly or indirectly to employees. In the case of indirect assignment, employees and groups are arranged in hierarchical roles. The number of groups assigned to an employee is calculated from the position in the hierarchy and the direction of inheritance. If you add an employee to hierarchical roles and that employee owns a user account, this user account is added to the group. Prerequisites for indirect assignment of employees to user accounts:

- Assignment of employees and groups is permitted for role classes (department, cost center, location or business role).
- The user accounts are marked with the option **Groups can be inherited**.
- User accounts and groups belong to the same domain.
Groups can also be assigned to persons via IT Shop requests. So that groups can be assigned using IT Shop requests, employees are added to a shop as customers. All groups are assigned to this shop can be requested by the customers. Requested groups are assigned to the employees after approval is granted.

For more detailed information about inheriting company resources, see the One Identity Manager Identity Management Base Module Administration Guide.

## Assigning Notes groups to departments, cost centers and locations

Assign groups to departments, cost centers, and locations in order to assign user accounts to them through these organizations. This task is not available for dynamic groups.

**To assign a group to departments, cost centers or locations (non role-based login)**

1. In the Manager, select the IBM Notes | Groups category.
2. Select the group in the result list.
3. Select Assign organizations.
4. Assign organizations in Add assignments.
   - Assign departments on the Departments tab.
   - Assign locations on the Locations tab.
   - Assign cost centers on the Cost centers tab.

**TIP:** In the Remove assignments area, you can remove the assignment of organizations.

**To remove an assignment**

- Select the organization and double click.

5. Save the changes.
To assign groups to a department, cost center or location (role-based login)

1. Select Organizations | Departments in Manager.
   - OR -
   Select Organizations | Cost centers in Manager.
   - OR -
   In Manager, select Organizations | Locations.
2. Select the department, cost center or location in the result list.
3. Select the Assign Notes groups task.
4. Assign groups in Add assignments.
   - TIP: you can remove the assignment of groups in the Remove assignments area.
   - To remove an assignment
     - Select the group and double click.
5. Save the changes.

Assigning Notes groups to business roles

Installed modules: Business Roles Module

You assign groups to business roles in order to assign them to user accounts over business roles. This task is not available for dynamic groups.

To assign a group to a business role (non role-based login)

1. In the Manager, select the IBM Notes | Groups category.
2. Select the group in the result list.
3. Select Assign business roles in the task view.
4. Assign business roles in **Add assignments**.

   **TIP:** In the **Remove assignments** area, you can remove the assignment of business roles.
   
   To remove an assignment
   
   - Select the business role and double click 🔄.

5. Save the changes.

**To assign groups to a business role (non role-based login)**

1. In Manager, select Business roles | <role class>.
2. Select the business role in the result list.
3. Select **AssignNotes groups**.
4. Assign groups in **Add assignments**. To filter the groups, select a domain in the **Notes Domains** input field.

   **TIP:** you can remove the assignment of groups in the **Remove assignments** area.
   
   To remove an assignment
   
   - Select the group and double click 🔄.

5. Save the changes.

**Assigning Notes user accounts directly to a Notes group**

To react quickly to special requests, you can assign groups directly to user accounts. This task is not available for dynamic groups.

**To assign a group directly to user accounts**

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select **Assign members**.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**. To filter the user accounts in the list, select a domain in **Notes domains**.

   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**Adding Notes groups to system roles**

Installed modules: System Roles Module

Use this task to add a group to system roles. If you assign a system role to employees, all the user accounts belonging to these employees inherit the group. This task is not available for dynamic groups.

**NOTE:** Groups with **Only use in IT Shop** set can only be assigned to system roles that also have this option set. For more detailed information, see the **One Identity Manager System Roles Administration Guide**.

**To assign a group to system roles**

1. In the Manager, select the **IBM Notes | Groups** category.
2. Select the group in the result list.
3. Select **Assign system roles in the task view**.
4. Assign system roles in **Add assignments**.

   **TIP:** In the **Remove assignments** area, you can remove the assignment of system roles.

   **To remove an assignment**

   - Select the system role and double click.
5. Save the changes.

Adding Notes groups to the IT Shop

When you assign a group to a IT Shop shelf, it can be requested by the shop customers. To ensure it can be requested, further prerequisites need to be guaranteed.

- The group is not a dynamic group.
- the group must be marked with the IT Shop option.
- the group must be assigned a service item.

**TIP:** In Web Portal, all products that can be requested are grouped together by service category. To make the group easier to find in Web Portal, assign a service category to the service item.

- If you only want it to be possible for the group to be assigned to employees through IT Shop requests, the group must also be labeled with the Use only in IT Shop option. Direct assignment to hierarchical roles or user accounts is no longer permitted.

**NOTE:** With role-based login, the IT Shop administrators can assign groups to IT Shop shelves. Target system administrators are not authorized to add groups to IT Shop.

**To add a group to IT Shop.**

1. In Manager select the IBM Notes | Group category (non-role-based login).
   - OR -
     In Manager, select Entitlements | Notes groups (role-based login).
2. In the result list, select the group.
3. Select Add to IT Shop.
4. In Add assignments, assign the group to the IT Shop shelves.
5. Save the changes.

**To remove a group from individual shelves of the IT Shop**

1. In Manager select the IBM Notes | Group category (non-role-based login).
   - OR -
     In Manager, select Entitlements | Notes groups (role-based login).
2. In the result list, select the group.
3. Select Add to IT Shop.
4. In Remove assignments, remove the group from the IT Shop shelves.
5. Save the changes.

To remove a group from all shelves of the IT Shop

1. In Manager select the IBM Notes | Group category (non-role-based login).
   - OR -
   In Manager, select Entitlements | Notes groups (role-based login).
2. In the result list, select the group.
3. Select Remove from all shelves (IT Shop).
4. Confirm the security prompt with Yes.
5. Click OK.

   The group is removed from all shelves by the One Identity Manager Service. All requests and assignment requests with this group, are canceled.

For more detailed information about request from company resources through the IT Shop, see the One Identity Manager IT Shop Administration Guide.

Additional tasks for managing Notes groups

After you have entered the master data, you can run the following tasks.

Overview of the Notes group

To obtain an overview of a group

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select Notes group overview.

Assigning Notes mail-in DBs to a Notes group

You can assign mail-in databases directly to a group.

To assign mail-in databases to a group

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select Assign members.
4. Select the Mail-in DB tab.
5. Assign mail-in databases in Add assignments. To filter the mail-in databases in the list, select a domain in Notes domains.
   - OR -
   In Remove assignments, remove the mail-in DBs.
6. Save the changes.

Assigning Notes servers to a Notes group

You can assign Notes servers directly to a group.

To assign servers to a group

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select Assign members.
4. Select the Server tab.
5. Assign the servers in Add assignments. To filter the servers shown, select a domain in the Notes domains.
   - OR -
   In the Remove assignments area, remove the servers.
6. Save the changes.

Related topics

Adding Notes groups to Notes

You can assign parent or child groups to a Notes group.

To assign child groups
1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign members**.
4. Select the **Groups** tab.
5. Assign child groups in **Add assignments**. To filter the groups, select a domain in the **Notes Domains** input field.
   - OR -
   - In **Remove assignments**, remove the child groups.
6. Save the changes.

To assign parent groups
1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign parent groups**.
4. Assign parent groups in **Add assignments**. To filter the groups, select a domain in the **Notes Domains** input field.
   - OR -
   - In **Remove assignments**, remove the parent groups.
5. Save the changes.

Effectiveness of group memberships

Table 48: Configuration Parameter for Conditional Inheritance

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>QER Structures Inherite GroupExclusion</td>
<td>Preprocessor relevant configuration parameter for controlling effectiveness of group memberships. If the parameter is set, memberships can be reduced on the basis of exclusion definitions. Changes to the parameter require recompiling the database.</td>
</tr>
</tbody>
</table>

When groups are assigned to user accounts an employee may obtain two or more groups, which are not permitted in this combination. To prevent this, you can declare mutually exclusive groups. To do this, you specify which of the two groups should apply to the user accounts if both are assigned.

It is possible to assign an excluded group directly, indirectly or by IT Shop request at any time. One Identity Manager determines whether the assignment is effective.

**NOTE:**

- You cannot define a pair of mutually exclusive groups. That means, the definition "Group A excludes group B" AND "Group B excludes groups A" is not permitted.
- You must declare each group to be excluded from a group separately. Exclusion definitions cannot be inherited.
- One Identity Manager does not check whether membership of an excluded group is permitted in another group (table NDOGroupInGroup).

The effectiveness of the assignments is mapped in the NDOUserInGroup and BaseTreeHasNDOGroup via the column XIsInEffect.

**Example of the effect of group memberships**

- The groups A, B and C are defined in a domain.
- Group A is assigned through the department "Marketing", group B through "Finance" and group C through the business role "Control group".

Clara Harris has a user account in this domain. She primarily belongs to the department "marketing". The business role "Control group" and the department "Finance" are assigned to her secondarily. Without an exclusion definition, the user account obtains all the permissions of groups A, B and C.

By using suitable controls, you want to prevent an employee from obtaining authorizations of groups A and group B at the same time. That means, groups A, B and C are mutually exclusive. A user, who is a member of group C cannot be a
member of group B at the same time. That means, groups B and C are mutually exclusive.

**Table 49: Specifying excluded groups (table NDOGroupExclusionAADGroupExclusion)**

<table>
<thead>
<tr>
<th>Effective Group</th>
<th>Excluded Group</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group A</td>
<td></td>
</tr>
<tr>
<td>Group B</td>
<td>Group A</td>
</tr>
<tr>
<td>Group C</td>
<td>Group B</td>
</tr>
</tbody>
</table>

**Table 50: Effective Assignments**

<table>
<thead>
<tr>
<th>Employee</th>
<th>Member in Role</th>
<th>Effective Group</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ben King</td>
<td>Marketing</td>
<td>Group A</td>
</tr>
<tr>
<td>Jan Bloggs</td>
<td>Marketing, finance</td>
<td>Group B</td>
</tr>
<tr>
<td>Clara Harris</td>
<td>Marketing, finance, control group</td>
<td>Group C</td>
</tr>
<tr>
<td>Jenny Basset</td>
<td>Marketing, control group</td>
<td>Group A, Group C</td>
</tr>
</tbody>
</table>

Only the group C assignment is in effect for Clara Harris. It is published in the target system. If Clara Harris leaves the business role "control group" at a later date, group B also takes effect.

The groups A and C are in effect for Jenny Basset because the groups are not defined as mutually exclusive. If this should not be allowed, define further exclusion for group C.

**Table 51: Excluded groups and effective assignments**

<table>
<thead>
<tr>
<th>Employee</th>
<th>Member in Role</th>
<th>Assigned Group</th>
<th>Excluded Group</th>
<th>Effective Group</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jenny Basset</td>
<td>Marketing</td>
<td>Group A</td>
<td></td>
<td>Group C</td>
</tr>
<tr>
<td></td>
<td>Control group</td>
<td>Group C</td>
<td>Group B</td>
<td>Group A</td>
</tr>
</tbody>
</table>

**Prerequisites**

- The configuration parameter **QER | Structures | Inherit | GroupExclusion** is enabled.
- Mutually exclusive groups belong to the same domain
To exclude a group

1. In the Manager, select the IBM Notes | Groups category.
2. Select a group in the result list.
3. Select Exclude groups.
4. Assign the groups that are mutually exclusive to the selected group in Add assignments.
   - OR -
   In Remove assignments, remove the groups that are not longer mutually exclusive.
5. Save the changes.

NotesGroup inheritance based on categories

In One Identity Manager, groups can be selectively inherited by user accounts. For this purpose, the groups and the user accounts are divided into categories. The categories can be freely selected and are specified using a mapping rule. Each category is given a specific position within the template. The template contains two tables; the user account table and the group table. Use the user account table to specify categories for target system dependent user accounts. In the group table enter your categories for the target system-dependent groups. Each table contains the category positions Position 1 to Position 31.

Every user account can be assigned to one or more categories. Each group can also be assigned to one or more categories. The group is inherited by the user account when at least one user account category item matches an assigned group. The group is also inherited by the user account if the group or the user account is not put into categories.

**NOTE:** Inheritance through categories is only taken into account when groups are assigned indirectly through hierarchical roles. Categories are not taken into account when groups are directly assigned to user accounts.

Table 52: Category Examples

<table>
<thead>
<tr>
<th>Category Position</th>
<th>Categories for User Accounts</th>
<th>Categories for Groups</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Default user</td>
<td>Default entitlements</td>
</tr>
<tr>
<td>2</td>
<td>System users</td>
<td>System user entitlements</td>
</tr>
<tr>
<td>3</td>
<td>System administrator</td>
<td>System administrator entitlements</td>
</tr>
</tbody>
</table>
To use inheritance through categories

- Define categories in the domain.
- Assign categories to user accounts through their master data.
- Assign categories to groups through their master data.

Assigning Notes groups as owners for documents

Specify in which documents to enter a group as owner. You can only assign documents belonging to the same domain as the group.

**To specify a group as user account owner**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign document owner**.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To specify a group as group owner**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign document owner**.
4. Select the **Groups** tab.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To specify a group as mail-in database owner**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign document owner**.
4. Select **Mail-in DB**.
5. Assign mail-in databases in Add assignments.
   - OR -
   In Remove assignments, remove the mail-in DBs.
6. Save the changes.

**To specify a group as certificate owner**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign document owner**.
4. Select the **Certificate** tab.
5. Assign certificates in Add assignments.
   - OR -
   In Remove assignments, remove the certificates.
6. Save the changes.

**To specify a group as server owner**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign document owner**.
4. Select the **Server** tab.
5. Assign the servers in Add assignments.
   - OR -
   In the Remove assignments area, remove the servers.
6. Save the changes.

**Assigning Notes groups as administrator for documents**

Specify which documents the group should administrate. You can only assign documents belonging to the same domain as the group.

**To specify a group as administrator for user accounts**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**.

   - OR -
   Remove user accounts from **Remove assignments**.

6. Save the changes.

**To specify a group as administrator for groups**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **Groups** tab.
5. Assign groups in **Add assignments**.

   - OR -
   Remove groups from **Remove assignments**.

6. Save the changes.

**To specify a group as administrator for mail-in databases**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **Mail-in DB** tab.
5. Assign mail-in databases in **Add assignments**.

   - OR -
   In **Remove assignments**, remove the mail-in DBs.

6. Save the changes.

**To specify a group as administrator for certificates**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **Certificate** tab.
5. Assign certificates in **Add assignments**.

   - OR -
   In **Remove assignments**, remove the certificates.

6. Save the changes.

**To specify a group as administrator for server documents**

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **Server document** tab.
5. Assign the server documents in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the server documents.
6. Save the changes.

**To specify a group as administrator for servers**
1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign administrable documents**.
4. Select the **Server** tab.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Assigning owners to Notes groups**

Specify which user accounts and groups are allowed to edit the selected group.

**To specify user accounts as owner of a group**
1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign owner** in the task view.
4. Select the **User** tab.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To specify groups as owner of a group**
1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Select **Assign owner** in the task view.
4. Select the **Groups** tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

## Assigning administrators to Notes groups

Specify which user accounts and groups are allowed to administrate the selected Notes group.

**To specify user accounts as administrators for groups**

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select Assign administrators in the task view.
4. Select the User tab.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

**To specify groups as administrators for groups**

1. Select the category IBM Notes | Groups.
2. Select the group in the result list.
3. Select Assign administrators in the task view.
4. Select the Groups tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

## Assigning extended properties to a Notes group

Extended properties are meta objects that cannot be mapped directly in One Identity Manager, for example, operating codes, cost codes or cost accounting areas.
To specify extended properties for a group

1. In the Manager, select the IBM Notes | Groups category.
2. Select the group in the result list.
3. Select Assign extended properties.
4. Assign extended properties in Add assignments.

**TIP:** In the Remove assignments area, you can remove the assignment of extended properties.

To remove an assignment
- Select the extended property and double click 🌐.

5. Save the changes.

For more detailed information about setting up extended properties, see the One Identity Manager Identity Management Base Module Administration Guide.

Locking groups

**Table 53: Configuration parameter for setting up denied access groups**

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\DenyAccessGroups</td>
<td>Denied access groups are used when a Notes user account is disabled.</td>
</tr>
<tr>
<td>TargetSystem\NDO\DenyAccessGroups\Memberlimit</td>
<td>This configuration parameter contains the maximum number of members per denied access group. When this limit is reached, another denied access group is created automatically.</td>
</tr>
<tr>
<td>TargetSystem\NDO\DenyAccessGroups\Prefix</td>
<td>This configuration parameter contains the prefix used for formatting the name of a denied access group.</td>
</tr>
</tbody>
</table>

A user is considered to be locked in IBM Notes if it is no longer possible for the user to log on to a server in the domain with this user account. The user loses access to the mailbox file through this. Access to a server can be prevented if the user account has the permissions type "Not access server" for the corresponding server document. This is very complicated in environments with several servers because a user account, which is going to be locked, must be given this permissions type for every server document.

For this reason, denied access groups are used. Each denied access group initially gets the permissions type "Not access server" for each server document. A user that is going to be
locked becomes a member of the denied access group and therefore is automatically prevented from accessing the domain servers.

Immediately after a user account has been locked in One Identity Manager, a denied access group is found for the user. If a denied access group of the right type is not found, the One Identity Manager Service creates a new group, "Deny list only", and automatically stores it on each server with "Not access server". The group name is made up of a prefix and a sequential index (for example "viDenyAccess0001"). Furthermore, this group is labeled with **Denied access group**.

**To change the prefix of an denied access group.**

1. Edit "TargetSystem\NDO\DenyAccessGroups\Prefix" in Designer.
2. Enter the prefix when a denied access group is initially created.
3. Save the changes.

It is also possible to specify the maximum number of user accounts in a denied access group. This is necessary in an environment with a large number of user accounts to prevent the maximum number of user names in one group being exceeded. If this limit is reached, a new denied access group is created with an index value incremented by "1" and added with the permissions type "Not access server" on all domain servers.

**To change the number of user accounts permitted in a denied access group**

- Edit the value of "TargetSystem\NDO\DenyAccessGroups\Memberlimit" in Designer.

  | TIP: The denied access groups are found using the script VI_Notes_GetOrCreateRestrictGroup then added. If denied access groups already exist in IBM Notes, they are handled like normal groups.

**To use these groups for the locking process in One Identity Manager**

1. Set **Denied access group** for this group.
2. Modify the prefix in "TargetSystem\NDO\DenyAccessGroups\Prefix" if necessary.
3. Modify VI_Notes_GetOrCreateRestrictGroup according to your requirements.

### Dynamic groups

Since IBM Domino version 8.5, it is possible to assign user accounts to groups by certain selection criteria. A criteria is, for example, the user account's mail server. Furthermore, members can be explicitly excluded or additionally added to the group. A group is mapped as a dynamic group in One Identity Manager, if "Home server" is selected in "Load dynamic member" (column AutoPopulateInput = '1'). Members cannot be assigned directly to these groups.

Dynamic groups are excluded from inheritance through hierarchical roles. This means that system roles, business roles, and organization cannot be assigned to dynamic groups. Inheritance exclusion cannot be specified. Dynamic groups cannot be requested in IT Shop.
Extension groups

IBM Notes adds so called extension groups if the maximum number of members in a group has been reached. These extension groups are imported into the One Identity Manager database by synchronization and cannot be edited. The connection to the dynamic group is created using the property **Parent Notes group** (column UID_NotesGroupParent). Excluded and additional lists are maintained exclusively for parent dynamic groups. Extension groups are only shown on the overview form.

Memberships in dynamic groups

You cannot assign members directly to dynamic groups. Members are determined over the home servers assigned to the group. All user accounts that are assigned as mail server to this server are automatically members of the dynamic group. In addition, memberships can be edited through an excluded and additional list. At the same time, user accounts that are assigned to both the excluded and additional lists cannot be members of the dynamic group. User accounts and groups can both be added to the excluded and additional lists.

When IBM Notes is calculating effective members, it finds all the user accounts that:

- The home server is assigned to as mail server
- Are directly assigned to an additional list
- Are assigned to an additional list as a member of a Notes group
- Are assigned to an excluded list
- Are assigned to an excluded list as a member of a Notes group

Effective memberships in dynamic groups (table NDOUserInGroup) are not maintained in One Identity Manager, but only loaded in the One Identity Manager by synchronization. Excluded and additional lists can be edited in Manager. Changes are immediately provisioned in the target system. Membership lists are recalculated there. After resynchronizing, the changes to the effective memberships are visible in One Identity Manager and can be taken into account by, for example, compliance checking.

If you use One Identity Manager's identity audit functionality and also check memberships in dynamic Notes groups in compliance rules, note the following:

**NOTE:** Changes to the excluded and additional lists in the Manager, cannot be immediately acted upon as effective memberships in dynamic groups are not updated until after resynchronization. Customize the synchronization schedule for your IBM Notes environment such that changes to effective memberships are promptly transferred to the One Identity Manager database.

For more detailed information about editing synchronization schedules, see the One Identity Manager Target System Synchronization Reference Guide.
Additional tasks for dynamic groups

To maintain memberships in dynamic groups, apply the following tasks to dynamic groups. **Assign member** is not available.

Assigning home servers

You can assign home servers to dynamic groups. All user accounts, only using this server as mail server become members of the dynamic group.

**To assign a home server to a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Assign home server**.
4. Assign the servers in **Add assignments**. To filter the servers shown, select a domain in the **Notes domains**.
   - OR -
   In the **Remove assignments** area, remove the servers.
5. Save the changes.

Editing the excluded list

Use the excluded list to specify which objects you want to exclude from membership in a dynamic group.

**To exclude user accounts from a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Edit additional list**.
4. Select **Users**.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.
To exclude groups from a dynamic group

1. Select the category IBM Notes | Groups.
2. Select the dynamic group in the result list.
3. Select Edit additional list.
4. Select the Groups tab.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

To exclude servers from a dynamic group

1. Select the category IBM Notes | Groups.
2. Select the dynamic group in the result list.
3. Select Edit additional list.
4. Select the Server tab.
5. Assign the servers in Add assignments.
   - OR -
   In the Remove assignments area, remove the servers.
6. Save the changes.

To exclude mail-in databases from a dynamic group

1. Select the category IBM Notes | Groups.
2. Select the dynamic group in the result list.
3. Select Edit additional list.
4. Select the Mail-in DB tab.
5. Assign mail-in databases in Add assignments.
   - OR -
   In Remove assignments, remove the mail-in DBs.
6. Save the changes.

Editing the additional list

Use the additional list to specify which objects you want to additionally include in membership in a dynamic group.
**To add additional user accounts to a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Edit additional list**.
4. Select **Users**.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To add additional groups to a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Edit additional list**.
4. Select the **Groups** tab.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To add additional servers to a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Edit additional list**.
4. Select the **Server** tab.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**To add additional mail-in databases to a dynamic group**

1. Select the category **IBM Notes | Groups**.
2. Select the dynamic group in the result list.
3. Select **Edit additional list**.
4. Select the **Mail-in DB** tab.
5. Assign mail-in databases in **Add assignments**.
   - OR -
In **Remove assignments**, remove the mail-in DBs.

6. Save the changes.

**Deleting Notes groups**

To delete a group

1. Select the category **IBM Notes | Groups**.
2. Select the group in the result list.
3. Click ✖️ to delete the group.
4. Confirm the security prompt with **Yes**.

The group is deleted completely from the One Identity Manager database and from IBM Notes.
Mail-in DBs

To edit mail-in database master data

1. Select the IBM Notes | Mail-In-DB category.
2. Select the mail-in DB in the result list. Select Change master data.
   - OR -
   Click in the result list.
3. Edit the mail-in database's master data.
4. Save the changes.

Mail-in DB general master data

Enter the following data for mail-in databases:

Table 54: General master data of a mail-in database

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>

</tbody>
</table>

One Identity Manager 8.1.1 Administration Guide for Connecting to IBM Notes

Mail-in DBs
### Additional tasks for mail-in databases

After you have entered the master data, you can run the following tasks.

### Overview of the mail-in DB

**To obtain an overview of a mail-in database**
1. Select the IBM Notes | Mail-In-DB category.
2. Select a mail-in database in the result list.
3. Select Notes mail-in database overview.

### Assigning Notes groups to a mail-in DB

To set up permissions for accessing mail-in databases, you assign Notes groups to the mail-in databases.

**To assign groups to a mail-in database**
1. Select the IBM Notes | Mail-In-DB category.
2. Select a mail-in database in the result list.
3. Select Assign groups.
4. Assign groups in Add assignments. To filter the groups, select a domain in the Notes Domains input field.
   - OR -
   Remove groups from Remove assignments.
5. Save the changes.
Assigning owners to a mail-in DB

You can define owner relations for mail-in databases. To do this, specify which user accounts and groups are permitted to edit the mail-in database.

To specify user accounts as owner

1. Select the IBM Notes | Mail-In-DB category.
2. Select a mail-in database in the result list.
3. Select Assign owner in the task view.
4. Select "Notes user accounts" in Table.
5. Assign user accounts in Add assignments.
   - OR -
     Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as owner

1. Select the IBM Notes | Mail-In-DB category.
2. Select a mail-in database in the result list.
3. Select Assign owner in the task view.
4. Select "Notes groups" in Table.
5. Assign groups in Add assignments.
   - OR -
     Remove groups from Remove assignments.
6. Save the changes.

Assigning administrators to a mail-in DB

You can define administrator relations for mail-in databases. To do this, specify which user accounts and groups are permitted to manage the mail-in database.

To specify user accounts as administrators

1. Select the IBM Notes | Mail-In-DB category.
2. Select a mail-in database in the result list.
3. Select Assign administrators in the task view.
4. Select "Notes user accounts" in Table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.

6. Save the changes.

**To specify groups as administrators**

1. Select the **IBM Notes | Mail-In-DB** category.
2. Select a mail-in database in the result list.
3. Select **Assign administrators** in the task view.
4. Select "Notes groups" in **Table**.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**Maintaining excluded and additional lists**

Mail-in databases can be members of dynamic groups. Use the excluded list to specify which mail-in databases you want to exclude from membership in a dynamic group. Use the additional list to specify which mail-in databases you want to additionally include in membership in a dynamic group.

**To add a mail-in database to a dynamic group's additional list**

1. Select the **IBM Notes | Mail-In-DB** category.
2. Select a mail-in database in the result list.
3. Select **Maintain excluded and additional**
4. Select the **Additional** tab.
5. Assign dynamic groups in **Add assignments** whose membership list you want to add to the mail-in database.
   - OR -
   In **Remove assignments**, remove the dynamic groups.
6. Save the changes.

**To add a mail-in database to a dynamic group's excluded list**

1. Select the **IBM Notes | Mail-In-DB** category.
2. Select a mail-in database in the result list.
3. Select **Maintain excluded and additional**
4. Select the **Excluded** tab.
5. Assign the dynamic groups in **Add assignments** from whose membership list you want to exclude the mail-in database.

   - OR -

   In **Remove assignments**, remove the dynamic groups.

6. Save the changes.

Notes servers

In One Identity Manager, all servers declared in the Domino Directory are mapped as Notes servers.

To edit the master data of a Notes server
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list. Select Change master data.
3. Enter the required data on the master data form.
4. Save the changes.

General master data for Notes servers

Table 55: Configuration parameters for handling new user ID files

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>TargetSystem\NDO\StoreIDInAddressbook</td>
<td>This configuration parameter control the behavior of ID files for new user accounts. If the configuration parameter is set, the ID files are attached to the employee document. If this configuration parameter is no set, the ID file is stored on the gateway server.</td>
</tr>
</tbody>
</table>

Enter the following general master data for Notes servers.

Table 56: General master data for a Notes server

<table>
<thead>

**Additional tasks for managing Notes servers**

After you have entered the master data, you can run the following tasks.

**The Notes server overview**

*To obtain an overview of a Notes server*

1. Select the **IBM Notes | Notes Server** category.
2. Select the server in the result list.
3. Select **Notes server overview**.

**Assigning groups to a Notes server**

You can add servers to a group as members.

*To add a Notes server to a group*

1. Select the **IBM Notes | Notes Server** category.
2. Select the server in the result list.
3. Select **Assign groups**.
4. Assign groups in **Add assignments**.
   - OR -
   - Remove groups from **Remove assignments**.
5. Save the changes.
Assigning mail servers to user accounts

Notes servers can be assigned directly to user accounts as mail servers. The server is entered in all selected user accounts as mail server (column UID_NDOServer). The task is only available if the Has Notes mailbox files option is enabled.

To assign Notes servers directly to user accounts

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign user accounts.
4. Assign user accounts in Add assignments.
   - OR -
   In Remove assignments, remove the user accounts.
5. Save the changes.

Assigning owners to the server document

Specify which user accounts and groups are entered as server document owners.

To specify user accounts as owners of a server document

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as owners of a server document

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
Remove groups from Remove assignments.
6. Save the changes.

Assigning administrators to the server document

Specify which user accounts and groups are allowed to administrate the server document.

To specify user accounts as administrators for a server document
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as administrators for a server document
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Specifying administrator access

You can limit administrator’s access rights in IBM Notes, whereby you issue access rights only at specific access levels. You can, for example, specify database administrators or issues full permissions to individual administrators.
Assigning administrators with full permissions

Assign user accounts and groups that are to have full access on servers.

To specify user accounts as full access administrators

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign full access administrators.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as full access administrators

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign full access administrators.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assign administrators

You can specify user accounts and groups that are allowed to administrate servers. Administrators obtain all permissions and entitlements of a database administrator and an administrator with full remote console permissions.

To specify user accounts as administrators

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign administrators in the task view.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
Remove user accounts from Remove assignments.

6. Save the changes.

To specify groups as administrators
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign administrators in the task view.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Related topics
- Assign database administrators on page 168
- Assigning administrators with full remote console access on page 169

Assign database administrators

Assign the user accounts and groups to administrate databases on servers.

To specify user accounts as database administrators
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign database administrators.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as database administrators
1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign database administrators.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.

6. Save the changes.

**Assigning administrators with full remote console access**

Assign user accounts and groups that are allowed to use the remote console to execute commands on this server. That includes permissions and entitlements of an administrator with read-only access.

**To specify user accounts as remote console administrators**

1. Select the **IBM Notes | Notes Server** category.
2. Select the server in the result list.
3. Select **Assign full remote console administrators**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To specify groups as remote console administrators**

1. Select the **IBM Notes | Notes Server** category.
2. Select the server in the result list.
3. Select **Assign full remote console administrators**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**Related topics**

- **Assign view-only administrators** on page 170
Assign view-only administrators

Assign user accounts and groups that are only allowed to use the remote console to execute commands supplying system information.

To specify user accounts as administrators with read access

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign view only administrators.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

To specify groups as administrators with read access

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign view only administrators.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

Assign system administrators

Assign the user accounts and groups that can execute any operating system commands on the server.

To specify user accounts as system administrators

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Assign system administrators.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
Remove user accounts from **Remove assignments**.

6. Save the changes.

**To specify groups as system administrators**

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select **Assign system administrators**.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   - Remove groups from **Remove assignments**.
6. Save the changes.

**Related topics**

- **Assign restricted system administrators** on page 171

**Assign restricted system administrators**

Assign user accounts and groups that can only execute restricted operating system commands on the server.

**To specify user accounts as administrators with restrictions**

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select **Assign restricted system administrators**.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   - Remove user accounts from **Remove assignments**.
6. Save the changes.

**To specify groups as administrators with restrictions**

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select **Assign restricted system administrators**.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**Related topics**
- Assign system administrators on page 170

**Server permissions settings**

In the server document, access lists are defined that specify what access is given to users, groups, or servers for different purposes.

**Access servers**

By default, all user accounts, groups, and servers can access the server. To limit server access, you can explicitly assign user accounts, groups, and servers that may access the server. After you have assigned the objects, server access is denied for all other user accounts, groups, and servers.

To only deny server access for individual user accounts, groups and servers, use **Not access server** in the task view. For more information, see No access servers on page 173.

**To explicitly ensure server access to user accounts**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Access server**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To explicitly ensure server access to groups**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Access server**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To explicitly ensure server access to servers**
1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Access server**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**No access servers**

The given user accounts, groups, and servers cannot access the server. If no user accounts, groups or servers are assigned, all user accounts, groups, and servers with server access permissions can access the server. For more information, see **Access servers** on page 172.

**To deny user accounts access to the server**
1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Deny server access**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To deny groups access to the server**
1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Deny server access**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.

6. Save the changes.

**To deny servers access to the server**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Deny server access**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Creating databases & templates**

The given user accounts, groups and servers can create new databases and templates on the server. If no user accounts, groups and servers are assigned, everyone is allowed to create new databases.

**To allow user accounts to create databases and templates**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create databases & templates**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To allow groups to create databases and templates**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create databases & templates**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To allow servers to create databases and templates**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create databases & templates**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Creating new replicas**

The given user accounts, groups and servers can create new replicas on the server. If no user accounts, groups and servers are assigned, everyone is allowed to create new replicas.

**To allow user accounts to create replicas**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create new replicas**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To allow groups to create replicas**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create new replicas**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To allow servers to create replicas**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Create new replicas**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Pass-through route through**

The given user accounts, groups, and servers use the server as pass-through servers without taking server access into account. If there are no user accounts, groups, or servers assigned, the server cannot be used as a pass-through server.

Servers must be set up as pass-through destinations for assignments to take effect. For more information, see **Pass-through destinations for routing** on page 177.

**To allow user accounts to use the server as pass-through server**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Route through Server**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To allow groups to use the server as pass-through server**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Route through Server**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To allow servers to use the server as pass-through server**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Route through Server**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Pass-through destinations for routing**

The given user accounts, groups, and servers can access the server using pass-through servers. Server access must also be set up on this server for user accounts, groups and servers.

If there are no user accounts, groups, or servers assigned, the server cannot be used as a pass-through destination.

**To allow user accounts to use the server as pass-through destination**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Access this server**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To allow groups to use the server as pass-through destination**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Access this server**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

**To allow servers to use the server as pass-through destination**
1. Select the category IBM Notes | Notes server.
2. Select the server in the result list.
3. Select Access this server.
4. In the Table input field, select the "Notes server" table.
5. Assign the servers in Add assignments.
   - OR -
   In the Remove assignments area, remove the servers.
6. Save the changes.

**Cause calling with the passthru server**

The given user accounts, groups, and servers can access other servers by using this pass-through server as a modem. If no user accounts, groups, and servers are assigned, dial up is not permitted.

Servers must be set up as pass-through destinations for assignments to take effect. For more information, see Pass-through destinations for routing on page 177. Furthermore, the user accounts, groups or servers these servers can use must be defined. For more information, see Pass-through route through on page 176.

**To allow user accounts to use the pass-through server for placing calls**
1. Select the category IBM Notes | Notes server.
2. Select the server in the result list.
3. Select Cause calling.
4. In the Table input field, select the "Notes user accounts" table.
5. Assign user accounts in Add assignments.
   - OR -
   Remove user accounts from Remove assignments.
6. Save the changes.

**To allow groups to use the pass-through server for placing calls**
1. Select the category IBM Notes | Notes server.
2. Select the server in the result list.
3. Select **Cause calling**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

**To allow servers to use the pass-through server for placing calls**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Cause calling**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign the servers in **Add assignments**.
   - OR -
   In the **Remove assignments** area, remove the servers.
6. Save the changes.

**Destinations permitted for passthru servers**

The pass-through server allows you to enter the destination servers that can be reached through this pass-through server. If no destination server is given, all servers given as pass-through destinations can be accessed.

Servers must be set up as pass-through destinations for assignments to take effect. For more information, see **Pass-through destinations for routing** on page 177. Furthermore, the user accounts, groups or servers these servers can use must be defined. For more information, see **Pass-through route through** on page 176.

**To specify the destination server for a pass-through server**

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Destinations allowed**.
4. In the **Table** input field, select the "Notes server" table.
5. Assign target servers in **Add assignments**.
   - OR -
   In **Remove assignments**, remove the servers.
6. Save the changes.
Signing or running unrestricted methods and operations

The given users and groups can run all agents on the server that are signed with their user ID file. Permissions for running restricted LotusScript and Java agents and for running simple and formula agents are included. If no user accounts or groups are assigned, nobody can run these agents on the server.

To allow user accounts to run unrestricted methods and operations

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Run or sign unrestricted methods and operations**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

To allow groups to run unrestricted methods and operations

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Run or sign unrestricted methods and operations**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

Running restricted LotusScript/Java-agents

The given user accounts and groups can run certain LotusScript and Java agents on the server. If no user accounts or groups are assigned, nobody can run these agents on the server.
To allow user accounts to run restricted LotusScript/Java agents

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Run restricted LotusScript/Java agents**.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

To allow groups to run restricted LotusScript/Java agents

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Run restricted LotusScript/Java agents**.
4. In the **Table** input field, select the "Notes groups" table.
5. Assign groups in **Add assignments**.
   - OR -
   Remove groups from **Remove assignments**.
6. Save the changes.

Related topics

- Signing or running unrestricted methods and operations on page 180

Running simple agents and formula agents

The given user accounts and groups can run simple agents and formula agents on the server (private as well as common). If no user accounts or groups are assigned, all user accounts and groups can run these agents.

To allow user accounts to run simple agents and formula agents

1. Select the category **IBM Notes | Notes server**.
2. Select the server in the result list.
3. Select **Run simple and formula agents** in the task view.
4. In the **Table** input field, select the "Notes user accounts" table.
5. Assign user accounts in **Add assignments**.
   - OR -
   Remove user accounts from **Remove assignments**.
6. Save the changes.

**To allow groups to run simple agents and formula agents**

1. Select the category IBM Notes | Notes server.
2. Select the server in the result list.
3. Select Run simple and formula agents in the task view.
4. In the Table input field, select the "Notes groups" table.
5. Assign groups in Add assignments.
   - OR -
   Remove groups from Remove assignments.
6. Save the changes.

- Signing or running unrestricted methods and operations on page 180

**Maintaining excluded and additional lists**

Notes servers can be members of dynamic groups. Use the excluded list to specify which servers you want to exclude from membership in a dynamic group. Use the additional list to specify which servers you want to additionally include in membership in a dynamic group.

**To add a Notes server to a dynamic group's additional list**

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Maintain excluded and additional
4. Select the Additional tab.
5. Assign the dynamic groups in Add assignments whose membership list you want to add the server.
   - OR -
   In Remove assignments, remove the dynamic groups.
6. Save the changes.

**To add a Notes server to a dynamic group's exclusion list**

1. Select the IBM Notes | Notes Server category.
2. Select the server in the result list.
3. Select Maintain excluded and additional
4. Select the Excluded tab.
5. Assign the dynamic groups in **Add assignments** from whose membership list you want to exclude the server.
   - OR -
   In **Remove assignments**, remove the dynamic groups.
6. Save the changes.

Using AdminP requests for processing IBM Notes processes

IBM Notes contains an asynchronous mechanism for processing various internal tasks. For example, if the name of a user changes, this mechanism ensures that the access control list from the Notes database is also modified.

The request is processed by the Notes server task "AdminP" that runs on every Notes server. This task checks at set intervals whether there are new requests pending that require handling. These are placed in the Notes database admin4.nsf in the form of request documents and then replicated on every Notes server. After a request has been processed, the executing Notes server creates a response document and if necessary a follow-up request.

AdminP requests are used by certain One Identity Manager processes, for example, to change parts of a users name, exchanging certificates or when restoring a user ID.

Several factors are involved in determining when these will be processed:

- When was the request replicated on the executing Notes server?
- How often does the AdminP server task run on the executing Notes server?
- Which type of request is it?

Automatic confirmation of AdminP requests

Certain AdminP requests have to be confirmed first by the administrator before they can be run. It is possible to confirm them automatically with One Identity Manager. Prerequisite for this is regular synchronization of the Admin4 database.

To confirm pending AdminP requests regularly

- In Designer, configure and enable the Automatically confirm IBM Notes request from AdminP schedule.
For more detailed information about editing schedules, see the *One Identity Manager Operational Guide*.

Confirmation of the following requests has currently been implemented:

- Approve MailfileDeletion
- Approve MovedReplicaDeletion
- Approve ReplicaDeletion

## AdminP request master data

Properties of synchronized AdminP requests are displayed in Manager.

### To display the master data of a request document

- Select IBM Notes | Hierarchical view | <domain> | Administration requests | <filter> | <object> | <action>.

### Table 60: Master data of an AdminP request document

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Action</td>
<td>Action to be executed by the AdminP request.</td>

</tr>
</tbody>
</table>

**Overview of all assignments**

The **Overview of all assignments** report is displayed for some objects, such as authorizations, compliance rules, or roles. The report finds all the roles, for example, departments, cost centers, locations, business roles and IT Shop structures in which there are employee who own the selected base object. In this case, direct as well as indirect base object assignments are included.

**Examples**

- If the report is created for a resource, all roles are determined in which there are employees with this resource.
- If the report is created for a group or another system entitlement, all roles are determined in which there are employees with this group or system entitlement.
- If the report is created for a compliance rule, all roles are determined in which there are employees who violate this compliance rule.
- If the report is created for a department, all roles are determined in which employees of the selected department are also members.
- If the report is created for a business role, all roles are determined in which employees of the selected business role are also members.

**To display detailed information about assignments**

- To display the report, select the base object from the navigation or the result list and select the report **Overview of all assignments**.
- Click the 📊 **Used by** button in the report toolbar to select the role class for which you want to determine whether roles exist that contain employees with the selected base object.
  
  All the roles of the selected role class are shown. The color coding of elements identifies the role in which there are employees with the selected base object. The meaning of the report control elements is explained in a separate legend. To access the legend, click the 🔍 icon in the report’s toolbar.
- Double-click a control to show all child roles belonging to the selected role.
- By clicking the ✉ button in a role’s control, you display all employees in the role with the base object.
Use the small arrow next to start a wizard that allows you to bookmark this list of employee for tracking. This creates a new business role to which the employees are assigned.

Appendix: Default project template for IBM Notes

A default project template ensures that all required information is added in One Identity Manager. This includes mappings, workflows and the synchronization base object. If you do not use a default project template you must declare the synchronization base object in One Identity Manager yourself.

Use a default project template for initially setting up the synchronization project. For custom implementations, you can extend the synchronization project with the Synchronization Editor.

The template uses mappings for the following schema types.

Table 65: Mapping Notes schema types to tables in the One Identity Manager schema.

About us

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales or other inquiries, visit https://www.oneidentity.com/company/contact-us.aspx or call +1-800-306-9329.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at https://support.oneidentity.com/.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
