

The Privileged Appliance and Modules (TPAM) 2.5.922

Required Installation Instructions

The minimum version in order to apply the patch is 2.5.920.

Warning: Since this patch can take several minutes to apply, the failover interval needs to be increased for any failover replicas to prevent them from failing over and not getting upgraded.

Key: Y7dQ5r9k0o

Option: /genkey

NOTE: If using TPAM API's a new version of the API must be downloaded and the applications using them updated. In 2.5.922 some there are some output changes that provide additional information. Refer to the TPAM 2.5 Administration Guide under chapters "CLI Commands" and "Application Programming Interface (API)" for more information.

AFTER THE PATCH HAS BEEN APPLIED TO THE PRIMARY AND REPLICAS, A REBOOT IS REQUIRED

Please refer to the 2.5.922 [release notes](#) for additional information and installation instructions.
