Operations Support Web Portal

The Operations Support Web Portal helps you to manage and use your web applications. For more information, see the [An overview of the functions](#) on page 6.

Employees that use the Operations Support Web Portal, must be assigned the **Base roles | Operations support** application role.

Users with this application role:

- Monitor handling of Job queue processes
- Monitor handling of the DBQueue
- Create access codes to enable employees to log on to Password Reset Portal

An overview of the functions

This section gives you an overview of the different functions available in the Operations Support Web Portal.

With the Operations Support Web Portal, you can:

- Identify system problems ([view](#) and [rerun](#) frozen or faulty processes)
- [Manage](#) processes
- [View](#) the synchronization status of target systems
- [Check](#) the status of services
- [Gain](#) an overview of web applications
- Manage the Job queue ([start and stop](#))
- Manage the DBQueue ([start and stop](#))
- [View](#) an object's change history
- [Create](#) passcodes to enable employees to log into the Password Reset Portal
- [View](#) the database log
- [View](#) unresolved object references
- [View](#) current (and recommended) system values for analyzing and troubleshooting.

The user interface layout

The user interface of the Operations Support Web Portal is divided into several sections:

Top - header

The title bar shows the current user, the  **Log off**, and the  **Info**.

Top - navigation

You can navigate within the Operations Support Web Portal by using the navigation to:

- Open an overview.
- [Monitor and manage](#) processes.
- [Display](#) the database log.
- [Display](#) all web applications.
- [Gain](#) an overview of the system status, and to restart and stop the Job queue and the DBQueue.

Work area

The work area changes depending on the menu you have called from the navigation.

Structure of the Operations Support Web Portal

The user interface is composed of the following main sections.

Statistics

The overview is also divided into the following sections:

Search

You can use search to:

- [Search](#) by database object.
- [Create](#) employee passcodes to enable employees to log in to the Password Reset Portal.
- [Display](#) an object's Job queue and DBQueue tasks.

Notifications

In the **Notifications** section, you can:

- Quickly recognize if, and to what extent, errors occurred when processing/running [processes](#).
- Quickly recognize if, and to what extent, there are new [log entries](#).

Service issues

In the **Service issues** pane, you can:

- Quickly recognize if, and to what extent, [Processes](#) failed or contained errors.
- Quickly recognize if, and to what extent, [Synchronization projects](#) failed or contained errors.
- Quickly recognize if other errors were found in the system (such as incorrect compilation).

Status reports

In the **Status reports** section, you can:

- [Check](#) service availability.

Processes

You can use the **Processes** tab to monitor processes. For more information, see [Manage processes](#) on page 22.

Database log

You can use the **Database log** tab to display any information, warnings, and error messages for different components in One Identity Manager. For more information, see [Viewing the database log](#) on page 32.

Web applications

In the **Web applications** tab, you can monitor your HTML applications. For more information, see [Web applications](#) on page 35.

System status

You can use the **System status** tab to gain a quick overview of the status of your system. For more information, see [System status](#) on page 37.

Logging in and out

You are required to log in before you can start working with Operations Support Web Portal.

To log in

1. In your internet browser, enter the address of the Operations Support Web Portal.
2. On the login page, select the authentication method you would like to use.
3. Enter your user name and password.
4. Click **Log in**.

To log out

- In the navigation, click  **Log off**.

System information

The Operations Support Web Portal keeps certain additional information about your system for diagnostics, analysis, and troubleshooting on the **System information** page. Use this information to collect general information about your system or to quickly identify problems in different categories and, if necessary, initiate prevention measures.

To find out how to display the page, see [Displaying system data](#) on page 11

On the **System information** page, you will see the following categories and recommended values:

TIP: For ease of use, values that have exceeded the recommended limit are highlighted in color. In addition, you can see your actual values and the values recommended by One Identity (in brackets).

- **Customer:** Information about the customer
- **DBServer:** Information about the database server
- **Database:** Information about the database
- **One Identity Manager:** Information about One Identity Manager (modules, version, and so on)

Related topics

- [Displaying system data](#) on page 11

Displaying system data

You can display information about your system at any time.

To display system information

1. In the header, click **i Info**.
2. In the dialog, click the **System information** tab.
3. On the **System information** tab, expand a category by clicking **▸** in front of the it.

This displays the values of the selected category.

4. If you use the data outside the Operations Support Web Portal, for example, for analysis, you can:
 - Click **Copy to clipboard**, to copy all your data to the clipboard and paste it somewhere else.
 - Click **Export as CSV**, to export the data to a comma delimited CSV file.

Related topics

- [System information](#) on page 11

Searching

You can use the search function to find objects in the database.

TIP: You must also use search to create a passcode for an employee.

There are certain rules that make successful searching possible. The following table uses examples to describe these rules.

Table 1: Rules with examples for searching

Example	Description
John Doe	Finds John Doe but not John Donut. Search results must contain all of the separate terms in the query. A logical AND is used.
John OR Doe	Finds Jane Doe and John Donut. Placing OR between the search terms acts as a logical OR operator. The results of this search contain at least one of the two search terms.
John NOT Doe	Finds John but not John Doe. The results of this search do not contain the term that comes after NOT .
J*	Finds John and Joanna. The * functions as a wildcard for any number of characters to complete the term.
Do?	Finds Doe but not Donut. The ? functions as a wildcard for a single character to complete the term.
"John Doe"	Provides results in which the search terms John and Doe follow one another. Results of this search contain the string in quotes as phrase.
John Doe~	Finds Jon Doe and also other similar results. A tilde ~ after the search term indicates that the search should also find similar results. This means that incorrectly spelled terms can be found, as well. You can specify the level of similarity by adding a number between 0 and 1 (with decimal point) after the tilde ~. The higher the number, the more similar the results.

Related topics

- [Running a search](#) on page 14
- [Viewing job queue and DBQueue tasks](#) on page 17
- [Creating a passcode for an employee](#) on page 19

Running a search

You can search for objects at any time.

To run a search

1. In the navigation, click **Statistics**.
2. (Optional) In the overview, click **Search in** in the **Search** section and select the tables that you want to search in.
3. In the search field, enter a search term.
4. In the result list below the search field, click the required result.

In the overview, processes in the Job queue associated with the object are displayed on the **Queues** tab under **Job queue** and the respective DBQueue tasks under **DBQueue**. You can also [view](#) the history of an object in a timeline or table. If the object is an employee, you can [create](#) a passcode for them.

Related topics

- [Searching](#) on page 13
- [Viewing job queue and DBQueue tasks](#) on page 17
- [Viewing object history](#) on page 16
- [Creating a passcode for an employee](#) on page 19

Object history

The Operations Support Web Portal allows you to display any changes to an object (for example, an employee) in a timeline or table.

To find out how to display the page, see [Viewing object history](#) on page 16.

You can view the following information in the change history table view.

Table 2: Object history

Column	Description
Modification date	Shows the date of the change.
Change type	Shows the type of change.
Name	Shows the name of the modified object.
Long name	Shows the long name of the modified object.
Type	Shows the type of the modified object.
User	Shows the user that made the change.

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

- [Viewing object history](#) on page 16
- [Searching](#) on page 13

Viewing object history

To view the history of an object

1. In the navigation, click **Statistics**.
2. (Optional) In the overview, in the **Search** pane, click **Search in** and select the tables that you want to search in.
3. In the search field, enter the name of the object for which you would like to view its history.
4. In the result list below the search field, click the required result.
5. In the overview, switch to the **History** tab.
6. Perform one of the following tasks:
 - To display the history graphically in a timeline, in the **View as** list, select the value **Timeline**.
 - To display the history in a table, select the value **Table** in the **View as** menu.

Related topics

- [Object history](#) on page 15
- [Searching](#) on page 13
- [Running a search](#) on page 14

Viewing job queue and DBQueue tasks

You can view the Job queue of a DBQueue by starting with an object.

To view Job queue and DBQueue tasks

1. In the navigation, click **Overview**.
2. (Optional) In the overview, click **Search in** in the **Search** section and select the tables that you want to search in.
3. In the search field, enter the name of the object for which you would like to view the Job queue and DBQueue tasks.
4. In the result list below the search field, click the required result.

In the overview, processes in the Job queue associated with the object are displayed on the **Job queues** tab. In the **DBQueue** tab, DBQueue tasks associated with the object are displayed.

The following table lists the tasks that can be found for an object.

Table 3: Overview of tasks for an object

Object type	Task
<ul style="list-style-type: none"> • Hierarchical roles • Organizations • Departments • Cost centers • Locations • Business roles • Application roles 	<ul style="list-style-type: none"> • Tasks for the object • Tasks for assignment requests for the object • Tasks for attestation cases for the object

Object type	Task
Employee	<ul style="list-style-type: none"> • Tasks for the employee • Tasks for hierarchical roles of which the employee is a member • Tasks for requests received by the employee • Tasks for requests placed by the employee • Tasks for attestation cases for the employee • Tasks for groups to which an employee's user account is assigned • Tasks for the employee user account <p>Shared and subidentity user accounts also belong to "Employee user accounts".</p>
User accounts	<ul style="list-style-type: none"> • Tasks for the user account • Tasks for groups to which the user account is assigned • Tasks for attestation cases for the user account
Groups	<ul style="list-style-type: none"> • Tasks for the group • Tasks for attestation cases for the group

- [Searching](#) on page 13
- [Running a search](#) on page 14

Creating a passcode for an employee

You can use search to find an employee and create a passcode for them.

To create a passcode for an employee

1. In the navigation, click **Overview**.
2. In the overview, click **Search in** in the **Search** section and select the **Employee** table.
3. Enter the employee's name in the search field.
4. In the result list below the search field, select your desired search result (of type **Person**).
5. In the overview, switch to the **Passcode** tab.
6. On the **Passcode** tab, click **Create passcode**.
The generated passcode and its validity are displayed in a dialog.
7. Note or copy the code and send the it and the validity period to the employee.

NOTE: If the four-eye principle is active for your system, you will only obtain the first part of the code here. The second half is sent to the employee's manager. The employee must ask the manager for the second half of the passcode.

Status reports

Status reports give you a quick overview of your HTML applications and their status.

Related topics

- [Availability check](#) on page 20
- [Check service availability](#) on page 21

Availability check

The **Service availability check** page shows whether your services are available. For example, you should perform an availability check if you suspect that services are not functioning properly (for example, because the server is unavailable).

To find out how to display the page and check availability, see [Check service availability](#) on page 21.

You can view the following information on the **Service availability check** page.

Table 4: Availability check

Column	Description
Server	Shows the name of the server upon which the service runs.
Connection	Shows whether the server is connected.
Last fetch time	Shows the last time the server was called.
URL	Shows the URL used to access the service.
Executing server	Shows the server upon which the service is executed.
IP address (IPv4)	Shows the IPv4 address used to access the service.

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

- [Check service availability](#) on page 21

Check service availability

You can check the availability of your services at any time.

To check service availability

1. In the navigation, click **Statistics**.
2. In the overview, click **Run** in the **Service availability check** tile in the **Status reports** section.
3. In **Service availability check**, click **Check all services**.
4. See the services/server details list.

Related topics

- [Status reports](#) on page 20

Manage processes

In the Operations Support Web Portal, you can use the following pages to manage processes at any time:

- [Process overview](#) on page 22
- [Process details](#) on page 23
- [Process steps](#) on page 25
- [Performance](#) on page 26
- [Synchronization](#) on page 27

Process overview

The **Processes** page shows all processes running in the Job queue and allows you to rerun failed processes.

To find out how to display the page, see [Viewing processes and details](#) on page 24 and how to rerun failed processes, see [Rerun processes](#) on page 24.

You can view the following information on the **Processes** page.

Table 5: Processes

Column	Description
Process name	Shows the name of the process.
Process task	Shows which process task is currently running.
Actions	<p>Actions that you can perform for the process:</p> <ul style="list-style-type: none"> • Retry: Reruns the process. You can rerun processes that have the status Frozen or Overlimit only. <p>NOTE: Processes with the status Frozen or Overlimit are marked with a beetle icon.</p> <ul style="list-style-type: none"> • Details: Shows the details view of a process.

TIP: Use the filter above the table to limit the number of processes displayed.

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

- [Viewing processes and details](#) on page 24
- [Process details](#) on page 23
- [Rerun processes](#) on page 24

Process details

You can access the **Process details** page through the **Processes** page. The page provides you with detailed information about a specific process. Any steps belonging to the process and their dependencies are displayed.

To find out how to display process details, see [Viewing processes and details](#) on page 24.

You can view the following information on the **Process details** page.

Table 6: Process details

Column	Description
Process task	Shows the name of the process task that is currently running.
Created on	Shows when the process started.
Steps completed	Shows how many process steps have already been completed (status Completed).
Progress state	Shows the process status. The following types of status may be shown: <ul style="list-style-type: none">• True: The process is currently running.• False: The process cannot run yet. The process is waiting for another process to end.• Frozen: The process cannot run. An error has occurred.• Overlimit: The process has been running for too long without changing to the status Completed or Frozen.• Completed: The process was successfully completed.• Delete: The process is being deleted (after completing successfully).

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

- [Manage processes](#) on page 22
- [Viewing processes and details](#) on page 24

Viewing processes and details

To view processes

- In the navigation, click **Processes | Processes**.
The **Processes** page is opened, displaying any ongoing processes.
| **TIP:** Use the filter above the table to limit the number of processes displayed.

To view process details

1. In the navigation, click **Processes | Processes**.
2. On the **Processes** page, click **Details** in the relevant process row in the **Actions** column.
The **Process details** page is opened, displaying the details of the relevant process (see [Process details](#) on page 23).

Related topics

- [Manage processes](#) on page 22
- [Process details](#) on page 23

Rerun processes

You can rerun processes in the process overview that have the status **Frozen** or **Overlimit**. You can also rerun processes in the failed processes overview (see [Display failed job queue processes](#) on page 25).

To rerun a process

1. In the navigation, click **Processes | Processes**.
2. In the **Processes** window, click **Retry** in the relevant process row in the **Actions** column.

To rerun several processes

1. In the navigation, click **Processes | Processes**.
2. In the **Processes** window, enable the check box next to the processes that you would like to rerun.
3. Click **Actions | Retry**.

Related topics

- [Manage processes](#) on page 22

- [Manage processes](#) on page 22

Performance

The **Processing performance** page displays information about a Job queue's performance.

To find out how to display the page, see [Viewing performance](#) on page 27

You can view the following information on the **Processing performance** page.

Table 8: Performance

Column	Description
Process task	Shows the name of the process task.
Class	Shows the process component class that the process task belongs to.
Process steps/minute	Shows how many process steps can be handled per minute.

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

- [Manage processes](#) on page 22

Synchronization

NOTE: You have to set up synchronization before you can view the synchronization status in the Operations Support Web Portal. For detailed information, see the *One Identity Manager Configuration Guide* and the *One Identity Manager Target System Synchronization Reference Guide*.

The **Synchronization** page shows you information about synchronizing your target systems with the database.

To find out how to display the synchronization status, see [Viewing synchronization status and log](#) on page 29

You can view the following information on the **Synchronization** page.

Table 9: Synchronization

Column	Description
Display name	Shows the name of the synchronization project.
Description	Shows the description of the synchronization project.
Next	Shows when the synchronization project will be run the next time.

Column	Description
synchronization	
Errors	Shows how many errors occurred the last time the synchronization project was run.
Affected objects	Shows the objects that had to be changed during synchronization, as they deviated from the database.

TIP: You can use the elements beneath the table to:

- Specify how many entries you want to display per page.
- Navigate to other pages.

Related topics

System status

On the **System status** page, you can view the status of current DBQueues or Job queues at any time. You can also check whether the database is up-to-date or must be recompiled. You can also stop the DBQueue or Job queue, or restart them.

To find out how to display the page, see [Viewing system status](#) on page 37.

On the **System status** page, you can see if:

- The DBQueue is running.
- The Job queue is running.
- The database is functioning properly.
- The database is up-to-date.

Stopping and starting the job queue

On the **System status** page, you can stop and restart the Job queue.

In certain situations, you may have to use the One Identity Manager Service to stop processes immediately. Changes in One Identity Manager can, for example, cause the system to become overloaded by making bulk entries in the Job queue.

To stop the Job queue

1. In the navigation, click **System status**.
2. On the **System status** page, in the **Job queue** tile, click **Stop**.
3. In the **Stop job queue** dialog, confirm the prompt with **Yes**.

To restart the Job queue

1. In the navigation, click **System status**.
2. On the **System status** page, in the **Job queue** tile, click **Start**.
3. In the **Start Job queue** dialog, confirm the prompt with **Yes**.

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales and other inquiries, such as licensing, support, and renewals, visit <https://www.oneidentity.com/company/contact-us.aspx>.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at <https://support.oneidentity.com/>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
