About One Identity Defender 6.1.0

Defender enhances security by using two-factor authentication to authenticate the users who request access to valuable resources within your organization. Defender uses your current identity store within Microsoft® Active Directory® to enable two-factor authentication, taking advantage of its inherent scalability and security, and eliminating the costs and time involved to set up and maintain proprietary databases. Defender's Web-

based administration and user self-service ease the implementation of two-factor authentication for both administrators and users.

Defender 6.1.0 is a minor release.

See [New features](#).

New features

New features in Defender 6.1.0

- Ability to approve an authentication request through a push notification on Android and iOS devices.

NOTE: Only the newly programmed iOS/Android tokens using Defender (v6.1.0 and above) support the push notifications.

Resolved issues

The following is a list of issues addressed in 6.1.0 release.

Table 1: Defender Desktop Login resolved issues

Resolved Issue	Issue ID
New Users are not able to login to Defender Desktop Login enabled Windows 10 machines.	216836 TFS776920
Unable to authenticate Defender Desktop Login due to recent Sophos updates.	244610
Defender Desktop Login does not work only if Kerberos authentication is enabled.	122492
Offline cache data is not updated after logging in to corporate VPN.	142181 TFS799974
Delayed log on seen in Windows 10 machines while logging from outside of the network.	124285
Defender Desktop Login does not try to search for the available DCs or GCs in the forest.	TFS790429
User authentication to Defender Desktop Login using Google Authenticator tokens that are prefixed with PIN fails, when Defender Service is unavailable.	TFS795260

Resolved Issue**Issue ID**

When a user authenticates to a Windows 10 system via Defender Desktop Login, the logon process is delayed.	TFS799227
--	-----------

Table 2: Defender Management Portal resolved issues

Resolved Issue	Issue ID
Defender Management Portal performance issues while programming an iOS token	247977
In the Self Service Portal, minimum and maximum length information of the PIN is missing while registering Hardware Tokens.	234648
When a Defender Administrator searches for a user in the Management Portal, username does not appear in the header.	219523
When User search is performed using Defender Management Portal, a delay is seen while retrieving User Properties.	122497
Self-service User is unable to request for Software Tokens from the Defender Management Portal.	140565
Unable to schedule the Defender reports.	TFS791194
When Defender Management Portal is installed with a non-Domain Admin Group as the default administrator group of the Management Portal, and a user who is member of the non-Domain Admin Group logs in to the Management Portal, then the Administrator privileges are not provided to the user.	TFS799703

Table 3: Defender Security Server resolved issues

Resolved Issue	Issue ID
Radius authentication fails with second factor when the multiple session requests hit the server concurrently	254454
Defender Security Server is unable to switch to the next available GC in the AD forest.	139493
The DSS Service restarts when a username consists of special characters and exceeds the defined character limit.	TFS792148
Authentication is abandoned when a user authenticates through VPN.	TFS795681 TFS796768
Defender Security Server service crashes if the SMTP server is not available.	TFS796950
When Defender Security Server is configured to use SSL port 636 and	TFS802183

Resolved Issue	Issue ID
server is rebooted, the DSS service fails to start.	
When a user is assigned an email or an SMS token along with an Authy token, the email or SMS is not sent to the User.	TFS800967
DSS Audit logs display incorrect Active Users count.	TFS796783
DSS Audit logs capture GC connections repeatedly.	TFS789612
YubiCloud tokens are not working with Defender.	TFS794403

Table 4: Defender Soft Token for Java resolved issues

Resolved Issue	Issue ID
When you attempt to run the Soft Token for Java with Java 9 or later installed on the system, you encounter the following error: ClassCastException: class jdk.internal.loader.ClassLoaders\$AppClassLoader cannot be cast to class java.net.URLClassLoader (jdk.internal.loader.ClassLoaders\$AppClassLoader and java.net.URLClassLoader are in module java.base of loader 'bootstrap').	TFS798816

Table 5: Other resolved issues

Resolved Issue	Issue ID
One Identity Defender Upgrade or Installation flows to 5.9.6 and above would throw the below error: <i>"Service Defender Security Server (DSServADE) failed to start, Verify that you have sufficient privileges to start the system service."</i>	260000
Entropy used during token seed calculation can lead to a potential system vulnerability issue	255241
Programmed soft token assigns an invalid token serial number to the user	262833
In the parent child environment, discrepancies seen in the Defender License count.	242105
When Allow expired Active Directory password to be changed option is enabled in Defender policy, user is not able to change the password.	224706
Defender License fails to install when the Defender Organizational Unit is in the custom location.	235292
When trying to access Management Portal site protected by the Defender ISAPI Agent, HTTP Internal Server error 500 is displayed.	166936
Soft token license mismatch seen in Administration Console and Defender	128649

Resolved Issue	Issue ID
Management Reports.	
Authentication using Temporary Tokens for Defender Soft Token for Android fails.	142255
Authentication using Temporary Tokens for Defender Soft Token for iOS fails.	142256
Authentication using Temporary Tokens for Defender Soft Token for Windows fails.	142288
In the Defender Administration Console, Administrator is not able to set PIN for tokens.	221449
After you install Microsoft July 2018 Security and Quality Rollup updates for .NET Framework updates, an error is displayed when you view Defender Properties in the Active Roles Web Interface.	122503
The Done and Swipe buttons in Defender Soft Token for iOS have UI issues on the iPhone XS Max device.	141465
Unable to delete GrIDSure Token/Defender Password from a User when the name contains forward slash.	134405
User is able to login to the clients only with Active Directory password even after completing the token registration.	126626
YubiCloud fails to validate the token response.	216093
The Active Roles Web interface does not allow assigning Soft Tokens for iOS for users.	TFS798859
Time-based non-OATH iOS tokens generate invalid responses when an expiry date is set for the token activation code.	TFS799224
In Active Roles Web interface, when a user assigned with Defender-Administrator Access template tries to program Defender tokens, a permission related error message is displayed.	TFS801613
Diagnostic logging for Integration Pack for Active Roles display token activation Code when programming token via Active Roles Console.	TFS795246
When Defender Soft Token for iOS is programmed with an expiration date, Token Properties are not updated correctly in Administration Console.	TFS629609

Known issues

The following is a list of issues, including those attributed to third-party products, known to exist at the time of release.

Table 6: General known issues

Known Issue	Issue ID
<p>Error message is displayed when service account is configured using UPN format in Defender Management Portal.</p> <p>Workaround</p> <p>Use sAMAccountName format instead of UPN format.</p>	122498
<p>While installing Defender Soft Token for Java on Windows OS, shortcuts were not created in the location specified during installation.</p> <p>Workaround</p> <p>Launch Defender Soft Token for Java from the installation folder.</p>	141508
<p>Authentication to GC/DC is failing until the Defender Security Server Service is restarted.</p> <p>Workaround</p> <p>Restart Defender Security Server service manually.</p>	142261
<p>When a user logs in for the first time using Defender Desktop Login provider, the system takes more time to respond after the token details are entered.</p>	TFS784380
<p>When trying to authenticate with the Defender ISAPI Agent, the following error occurs even if a valid token response is entered:</p> <p>Error Message - <i>Invalid token response. Enter a valid token response</i></p> <p>Workaround</p> <p>The error message is displayed when the Defender ISAPI Agent is not configured correctly, for example, when the connection to the Defender Security Server is specified incorrectly. Make sure that the settings of the Defender ISAPI Agent are configured correctly.</p>	TFS783463
<p>The user is not allowed to log in to the system when the group name is renamed in Active Directory.</p> <p>Workaround</p> <p>The Admin user must log into the client machine, remove and add the group from Defender Desktop Login configuration tool (GinaConfig.exe).</p>	TFS781927
<p>If Test connection automatically setting in the DSS configuration is enabled, a very large number of DSS logs may be generated.</p> <p>Workaround</p> <ul style="list-style-type: none"> • Workaround 1: Disable the 'Test connection automatically' setting. • Workaround 2: Make sure you have enough space for DSS log files, and periodically delete old log files. 	TFS712795

Known Issue	Issue ID
<p>When a user using their GrIDSure token authenticates to a website protected by the Defender ISAPI Agent, they are unable to reset the PIP. This may happen if the user has other tokens assigned to them besides the GrIDSure token.</p> <p>Workaround</p> <p>Make sure that no other tokens are assigned to the user, if they are using the GrIDSure token for authentication.</p>	TFS723423
<p>"The user name or password is incorrect." error may occur even when user log-in to the Defender Management Portal with correct credentials. This error message may appear if the domain controller is not available to the Management Portal.</p> <p>Workaround</p> <p>Make sure that the Active Directory functions correctly, and the machine with Defender Management Portal is able to reach a domain controller.</p>	TFS588772
<p>When authenticating via Defender, users may encounter the message "You must change your password before logging on for the first time" that prevents them from logging in. This may occur if the user's password has expired and the Defender security policy is set to use the proper name or Defender ID for authentication.</p> <p>Workaround</p> <p>Do one of the following:</p> <ol style="list-style-type: none"> 1. Allow users to change their expired passwords using some other means. 2. Change the Defender security policy to use a SAM account name or UPN for authentication. 	TFS366713
<p>When a user attempts to log on to a computer protected by Defender Desktop Login with a GrIDSure token for the first time the following error may appear: "Access Denied." This may occur if the user uses an alternate UPN suffix.</p> <p>Workaround</p> <p>Switch the user to use the default UPN suffix during the logon procedure.</p>	TFS366722
<p>An attempt to authenticate users using a VIP credential may fail in a child domain, when the VIP credential certificate is installed only in the root domain.</p> <p>Workaround</p> <p>Install the VIP credential certificate in the child domain.</p>	TFS366743
<p>A user, authenticating via Defender Password for the first time, is not</p>	TFS366794

Known Issue**Issue ID**

prompted to change the password, even though the corresponding option was selected when the password was assigned to the user. This may occur if Defender Password expiration is not enabled in the corresponding security policy.

Workaround

Edit the corresponding security policy object in the Administration Console and enable expiration of the Defender Password.

To change the user ID setting on an access node, the DSS Service must be restarted. TFS366822

Workaround

Restart the Defender Security Server service. You can use the Defender Security Server Configuration utility to do this.

When attempting to log on to a computer protected by Defender Desktop Login as a local user, you may see the following confusing error message: "The Defender Security Server could not log you on as your system administrator has denied you the right to log on locally." TFS366824

Workaround

This error message indicates that you cannot log on as a local user without Defender authentication.

A user may encounter an error when trying to change the PIN on a token. This issue may occur if a GrIDSure token is also assigned to that same user. TFS366941

Workaround

Make sure that users who are assigned a token with a PIN do not have a GrIDSure token assigned to them.

The Token Program wizard in the Defender Administration Console may skip pages and produce errors. This may occur when two or more instances of the Administration Console are running at the same time on the same computer. TFS417432

Workaround

Use only a single instance of Defender Administration Console and close the multiple instances.

When you assign a token to a user in the Administration Console, the token may fail to immediately appear in the user's list of tokens. TFS417457

Workaround

This behavior is due to the replication latency in Active Directory. View the list of tokens after the changes have been replicated.

Known Issue	Issue ID
<p>After you change the user's token list in the Management Portal (e.g. assign a token to the user, or unassigning a token), the list of tokens may remain unchanged.</p> <p>Workaround</p> <p>This behavior is due to the replication latency in Active Directory. View the list of tokens after the changes have been replicated.</p>	TFS417714
<p>When using the Management Portal to unlock an account locked by Defender (not Windows), you may see a confusing confirmation message about resetting the violation count.</p> <p>Workaround</p> <p>When you unlock an account locked by Defender, the violation count is automatically reset as well.</p>	TFS420395
<p>When accessing the Management Portal for the first time, it is possible to access the Defender reports site, but the reports are non-functional. This may happen because the Management Portal service account has not yet been configured.</p> <p>Workaround</p> <p>Navigate to the Management Portal Administration user interface and configure the service account.</p>	TFS421707
<p>When you point the mouse cursor on the "Authentication requests by DSS" diagram in the Management Portal Dashboard, the tooltip may list an incorrect value, while the diagram displays the correct value for the number of authentication requests.</p> <p>Workaround</p> <p>Do either of the following:</p> <ol style="list-style-type: none"> 1. Use the value on the diagram. 2. Reload the web page (CTRL+F5) to update the value in the tooltip. 	TFS421715
<p>When you use the Defender Integration Pack for ActiveRoles, the Defender license allocation value seen in the ActiveRoles Administration Console may be different from the values in the Defender Administration Console. This may occur in a multi-domain environment when ActiveRoles Server accesses a domain using a domain controller that is not a global catalog.</p> <p>Workaround</p> <p>Use the values in the Defender Administration Console, these are the correct values.</p>	TFS429274
<p>When you program mobile software tokens using the Defender Integration Pack for Active Roles, the option to program the tokens in challenge-response mode is available. Selecting this option may produce an error.</p>	TFS431278

Known Issue**Issue ID****Workaround**

Defender software tokens for mobile devices currently do not support challenge-response mode. Ignore this option.

When trying to access a site protected by the Defender ISAPI Agent, you may see the following error: "Calling LoadLibraryEx on ISAPI filter failed." This may occur if the web site protected by the ISAPI Agent is a 32-bit site running on a 64-bit IIS. TFS435240

Workaround

If you need to run a 32-bit web site, consider running it on a 32-bit computer with a 32-bit IIS and install the 32-bit version of the Defender ISAPI Agent.

When you enter a verification code when requesting a software token through the Self-Service Portal, you may see the following confusing error message: "The link has expired." TFS436701

Workaround

This error message means that the verification code has expired.

Start over by requesting a software token.

In an environment where the Defender EAP Agent is used in conjunction with the Soft Token for Windows, the passcode from the token may not be accepted when establishing a VPN connection. This issue occurs when Soft Token for Windows is programmed in challenge-response mode. TFS439473

Workaround

Program the Soft Token for Windows in synchronous mode.

The Defender EAP Agent may not integrate with the Soft Token for Windows to retrieve the token response automatically. This issue occurs on a 64-bit operating system. TFS441655

Workaround

Launch the Soft Token for Windows, and enter the passcode in the VPN client manually.

Users who are directly assigned to an access node cannot be moved to a different OU. TFS452765

Workaround

Un-assign the user from the access node, move the user, and then assign the user back to the access node. To prevent this issue, assign groups rather than individual users to access nodes.

When Defender EAP Agent is used with a VPN connection, the dialog box to enter the token response does not appear. This issue may occur if EAP TFS462928

Known Issue	Issue ID
Agent is installed on a computer running Windows 10 operating system.	
Workaround	
Use the EAP Agent installed on a computer running an operating system other than Windows 10.	
When you try to uninstall the Defender Soft Token for Java, the uninstallation wizard may finish successfully, but no application files are removed. This may occur on computers running Windows 8 or later with User Account Control enabled.	TFS487077
Workaround	
Open the command prompt as administrator and run the following command: <code>java -jar <path to uninstaller file></code>	
When configuring the option "Use service account for all actions" in the Management Portal settings, the 'Save' button is not enabled to save the changes.	TFS504067
Workaround	
Re-enter and re-confirm the service account password to enable the 'Save' button.	
When searching for tokens on the Management Portal, a token is displayed as assigned to a single user, even though the token is assigned to more than one user. This occurs when Internet Explorer is used as the browser.	TFS504432
Workaround	
Use a different supported browser.	
When trying to authenticate through the ISAPI Agent the following error is displayed: "Invalid Token Response.", even though you have entered the correct token response. This occurs when DSS is unavailable.	TFS591408
Workaround	
Make sure that the DSS is available and retry the login attempt.	
When Web Service API is the only Defender component installed on a computer, it does not work.	TFS597986
Workaround	
Install Defender Management Shell or Management Portal component on the same computer.	
After upgrading to the latest version of the Web Service API, both the old and the new versions of the component are present in Windows "Installed Programs" list.	TFS598397
Workaround	

Known Issue	Issue ID
Only the latest version gets installed. You can ignore the old version that is listed.	
When requesting an SMS token through the Self-Service Portal, the Program Token wizard finishes successfully, but the token is not assigned. This occurs when out-of-band verification is used and the verification link is opened on a device different from the original one.	TFS598605
Workaround	
On the final page of the Program Token wizard, click Back , click Next , and then click Finish .	
While trying to log in to the Defender Management Portal after an upgrade to version 5.9, user may see the login screen of the previous version.	TFS722484
Workaround	
Clear the browser cache.	

System requirements

You can install Defender on physical computers or virtual machines.

System requirements for Defender components:

- [Defender Security Server](#)
- [Defender Administration Console](#)
- [Desktop Login](#)
- [Desktop Login Group Policy](#)
- [Defender Management Portal](#)
- [Extensible Authentication Protocol \(EAP\) Agent](#)
- [Defender Integration Pack for Active Roles](#)
- [ISAPI Agent](#)
- [Defender Management Shell](#)
- [VPN Integrator](#)
- [Client SDK](#)
- [Web Service API](#)

System requirements for native Defender software tokens:

- [Defender Soft Token for Android™](#)
- [Defender Soft Token for iOS](#)

- [Defender Soft Token for Java](#)
- [Defender Soft Token for Windows](#)

Defender Security Server

Table 7:
Defender Security Server system requirements

Requirement	Details
Processor	2 GHz or faster, x86 or x64 architecture
Memory (RAM)	4 GB
Hard disk space	40 GB or more
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012
Additional Software	<ul style="list-style-type: none"> • Microsoft Visual C++ 2019 Redistributable Package (installed automatically together with the Defender Security Server) • Microsoft .NET Framework 4.8 (installed automatically together with the Defender Security Server)

Table 8:
Defender Security Server system requirements

Requirement	Details
Processor	2 GHz or faster, x86 or x64 architecture
Memory (RAM)	4 GB
Hard disk space	40 GB or more
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012

Requirement	Details
Additional Software	<ul style="list-style-type: none"> • Microsoft Visual C++ 2019 Redistributable Package (installed automatically together with the Defender Security Server) • Microsoft .NET Framework 4.8 (installed automatically together with the Defender Security Server)

Defender Administration Console

Table 9:
Defender Administration Console system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	2 GB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012 • Windows 10 (32- and 64-bit editions) • Windows 8.1 (32- and 64-bit editions) • Windows 8 (32- and 64-bit editions)
Additional software	<ul style="list-style-type: none"> • Active Directory Users and Computers (ADUC) tool • Microsoft Visual C++ 2019 Redistributable Package (installed automatically together with the Defender Administration Console) • Microsoft .NET Framework 4.8 (installed automatically together with the Defender Administration Console)

Desktop Login

Table 10:
Desktop Login system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	1 GB or more
Hard disk space	20 MB or more
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none">• Windows Server 2019• Windows Server 2016• Windows Server 2012 R2• Windows Server 2012• Windows 10 (32- and 64-bit editions)• Windows 8.1 (32- and 64-bit editions)• Windows 8 (32- and 64-bit editions)
Additional Software	Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the Defender Desktop Login)

Desktop Login Group Policy

Table 11:
Desktop Login Group Policy system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	1 GB or more
Hard disk space	20 MB or more
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none">• Windows Server 2019• Windows Server 2016• Windows Server 2012 R2

Requirement	Details
	<ul style="list-style-type: none"> Windows Server 2012 Windows 10 (32- and 64-bit editions) Windows 8.1 (32- and 64-bit editions) Windows 8 (32- and 64-bit editions)
Additional Software	Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the Desktop Login Group Policy)

Defender Management Portal

Table 12:
Defender Management Portal system requirements

Requirement	Details
Processor	2 GHz or faster, x86 or x64 architecture
Memory (RAM)	2 GB or more
Hard disk space	40 GB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> Windows Server 2019 Windows Server 2016 Windows Server 2012 R2 Windows Server 2012
Additional software	<ul style="list-style-type: none"> Microsoft Internet Information Services (IIS) 10.0, 8.5, 8.0, 7.5, or 7.0, with Forms Authentication and ASP .NET role services enabled (configured automatically by the setup) Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the Defender Management Portal) Microsoft .NET Framework 4.8 (installed automatically together with the Defender Management Portal) To access the Defender Management Portal, you can use any of the following Web browsers:

Requirement	Details
	<ul style="list-style-type: none"> • Chrome 15 or later • Firefox 8 or later • Internet Explorer 9 or later (Internet Explorer run in compatibility mode is not supported) • Opera 11.1 or later • Safari 5.1 or later

Extensible Authentication Protocol (EAP) Agent

Table 13:
EAP Agent system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	10 MB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012 • Windows 10 (32- and 64-bit editions) • Windows 8.1 (32- and 64-bit editions) • Windows 8 (32- and 64-bit editions)

Defender Integration Pack for Active Roles

Table 14:
Defender Integration Pack for Active Roles system requirements

Requirement	Details
Required software	<ul style="list-style-type: none"> • Active Roles 7.4

Requirement	Details
	<p>Required Active Roles components:</p> <ul style="list-style-type: none"> • Administration Service • Web Interface • Active Roles console • Defender Administration Console
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012
Additional software	<ul style="list-style-type: none"> • Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the Defender Integration Pack for Active Roles) • Microsoft .NET Framework 4.8 (installed automatically together with the Defender Integration Pack for Active Roles)

ISAPI Agent

Table 15:
ISAPI Agent system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	20 MB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012
Microsoft Internet Information Services (IIS)	IIS 10.0, 8.5, 8.0, 7.5, or 7.0 with the following role services enabled:

Requirement	Details
	<ul style="list-style-type: none"> Web Server/Application Development <ul style="list-style-type: none"> ASP ISAPI Filters Management Tools/IIS 6 Management Compatibility <ul style="list-style-type: none"> IIS 6 Metabase Compatibility <p>The above mentioned roles services are activated automatically by the setup. The Web Server (IIS) role is not installed by the setup.</p>
Web browsers	<p>You can use any of the following web browsers to access web sites protected by ISAPI Agent:</p> <ul style="list-style-type: none"> Chrome 15 or later Firefox 8 or later Internet Explorer 9 or later (Internet Explorer run in compatibility mode is not supported) Opera 11.1 or later Safari 5.1 or later
Additional Software	Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the ISAPI Agent)

Defender Management Shell

Table 16:
Defender Management Shell system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	10 MB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> Windows Server 2019 Windows Server 2016 Windows Server 2012 R2 Windows Server 2012

Requirement	Details
	<ul style="list-style-type: none"> Windows 10 (32- and 64-bit editions) Windows 8.1 (32- and 64-bit editions) Windows 8 (32- and 64-bit editions)
Additional software	<ul style="list-style-type: none"> Windows PowerShell 3.0 or later Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with the Defender Management Shell) Microsoft .NET Framework 4.8 (installed automatically together with the Defender Management Shell)

VPN Integrator

Table 17:
VPN Integrator system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	10 MB or more
Operating system	<p>Your computer must be running one of the following operating systems (with or without any Service Pack):</p> <ul style="list-style-type: none"> Windows Server 2019 Windows Server 2016 Windows Server 2012 R2 Windows Server 2012 Windows 10 (32- and 64-bit editions) Windows 8.1 (32- and 64-bit editions) Windows 8 (32- and 64-bit editions)

Client SDK

Table 18:
Client SDK system requirements

Requirement	Details
Processor	1.4 GHz or faster, x86 or x64 architecture
Memory (RAM)	512 MB or more
Hard disk space	10 MB or more
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none">• Windows Server 2019• Windows Server 2016• Windows Server 2012 R2• Windows Server 2012• Windows 10 (32- and 64-bit editions)• Windows 8.1 (32- and 64-bit editions)• Windows 8 (32- and 64-bit editions)
Additional Software	<ul style="list-style-type: none">• Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with Client SDK)

Web Service API

 - Windows Server 2012 R2
 - Windows Server 2012
 - Windows 10 (32- and 64-bit editions)
 - Windows 8.1 (32- and 64-bit editions)
 - Windows 8 (32- and 64-bit editions)
 - Mac OS X
 - Linux/Unix

Defender Soft Token for Windows

Requires one of the following operating systems (with or without any Service Pack):

Table 20:
Defender Soft Token system requirements

Requirement	Details
Operating system	Your computer must be running one of the following operating systems (with or without any Service Pack): <ul style="list-style-type: none">• Windows Server 2019• Windows Server 2016• Windows Server 2012 R2• Windows Server 2012• Windows 10 (32- and 64-bit editions)• Windows 8.1 (32- and 64-bit editions)• Windows 8 (32- and 64-bit editions)
Additional software	<ul style="list-style-type: none">• Microsoft Visual C++ Redistributable for Visual Studio 2019 (installed automatically together with Defender Soft Token for Windows)

Upgrade and compatibility

One Identity Defender is upgradeable from version 5.9.6 or later.

To upgrade a Defender component, install the new version of that component on the computer where an earlier version of the component is installed and follow the instructions mentioned on the screen to complete the upgrade process.

NOTE:

- If your current Defender version is lower than version 5.9.6, it is recommended to upgrade to version 5.9.6 or later.
- Since Defender 6.1.0 release includes the schema extension, upgrading to Defender 6.1.0 release requires the **Schema Admin** role.

Product licensing

To add a Defender license

1. On the computer where the Defender Administration Console is installed, open the Active Directory Users and Computers tool (dsa.msc).
2. In the left pane (console tree), expand the appropriate domain node, and select the Defender container.
3. On the menu bar, select **Defender | License**.
4. On the **License** tab, click **Add License**.
5. In the dialog box that opens, enter the license key and site message provided to you by One Identity.
6. Click **OK**.

For more information on the product licensing, see the *Defender Administration Guide*.

Getting started with Defender 6.1.0

For installation instructions, see the *Defender Administration Guide*.

Globalization

This section contains information about installing and operating this product in non-English configurations, such as those needed by customers outside of North America. This section does not replace the materials about supported platforms and configurations found elsewhere in the product documentation.

This release is Unicode-enabled and supports any character set. In this release, all product components should be configured to use the same or compatible character encodings and should be installed to use the same locale and regional options. This release is targeted to support operations in the following regions: North America, Western Europe and Latin

America, Central and Eastern Europe, Far-East Asia, Japan. It supports bidirectional writing (Arabic and Hebrew). The release supports Complex Script (Central Asia – India, Thailand).

The release is localized to the following languages: German and Russian.

This release has the following known capabilities or limitations: Only the Web-based Defender Self-Service Portal has been translated to German and Russian.

About us

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales and other inquiries, such as licensing, support, and renewals, visit <https://www.oneidentity.com/company/contact-us.aspx>.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at <https://support.oneidentity.com/>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
