

## Major Release – v9.0

### erwin Mapping Manager Adapter

Pull Mappings and their attributes from erwin Mapping Manager with our new Web Services Adapter and use that data in other applications including the erwin suite\*. Users can also bring across hyperlinks for specific Mappings for easy navigation.

### erwin Metadata Manager Adapter

Pull data from Metadata Manager with our new Web Services Adapter and use that data in other applications including the erwin suite\*.

(\*erwin products must have DT Adapter)

### CAST HighLight Adapter

- Domains can be read (Name, CHL ID) and used to update the source model, so to provide the context when creating new applications
- All application belonging to a parent domain and its subdomains will be read (Name, CHL ID) and used to update the source model, so to update applications in CAST
- Based on source data (Name, CAST HighLight ID, and the CAST HighLight ID of the Domain which the application belongs to are expected) the domain will be created (ID null or 0) or updated (ID equal to an existing CAST HighLight ID).
- Based on source data (Name, CAST HighLight ID, and the Name and CAST HighLight ID of the Domain which the application belongs to are expected) the application will be created (ID null or 0) or updated (ID equal to an existing CAST HighLight ID).

### Fixes

- Languages other than English used an incorrect encoding
- SQL server authentication
