Basics for mapping company structures in One Identity Manager

One Identity Manager supplies employees in a company with company resources. For example, permissions, or software, according to their function. To do this, the company structures are represented in hierarchical role form in One Identity Manager.

Roles are objects through which company resources can be assigned. Employees, devices, and workdesks are assigned to roles as members. Members can obtain their company resources through these roles when One Identity Manager is appropriately configured.

Company resource assignments are not made to individual employees, devices, or workdesks but centrally and then inherited automatically through a predefined distribution list.

In One Identity Manager, the following roles are defined for mapping company structures:

- **Departments, cost centers, and locations**
  Departments, cost centers, locations, and business roles are each mapped to their own hierarchy under Organizations. This is due to their special significance for daily work schedules in many companies.

- **Business roles**
  Business roles map company structures with similar functionality that exist in addition to departments, cost centers, and locations. This might be projects groups, for example. For detailed information about business roles, see the One Identity Manager Business Roles Administration Guide.
  
  | NOTE: This function is only available if the Business Roles Module is installed.

- **Application roles**
  Application roles are used to grant One Identity Manager object permissions to One Identity Manager users. For more information about application roles, see the One Identity Manager Authorization and Authentication Guide.

Detailed information about this topic

- Hierarchical role structure basic principles on page 11
- Basic principles for assigning company resources on page 15
Hierarchical role structure basic principles

Departments, cost centers, locations, and application roles are arranged hierarchically. Assigned company resources are inherited by members through these hierarchies. Company resource assignments are not made to individual employees, devices or workdesks but centrally and then inherited automatically through a predefined distribution list.

Hierarchies can either be created following the top-down or the bottom-up model in One Identity Manager. In the top-down model, roles are defined based on the area of activity and the company resources required to fulfill the activities are assigned to the roles. In the case of the bottom-up model, company resource assignments are analyzed and the roles result from this.

Detailed information about this topic

- Inheritance directions within a hierarchy on page 11
- Discontinuing inheritance on page 13

Inheritance directions within a hierarchy

The direction of inheritance decides the distribution of company resources within a hierarchy. One Identity Manager basically recognizes two directions of inheritance:

- Top-down inheritance
  - In One Identity Manager, top-down inheritance maps the default structure within a company. With its help, a company’s multilevel form can be represented with main departments and respective subdepartments.

- Bottom-up inheritance
  - Whereas in top-down inheritance, assignments are inherited in the direction of more detailed classifications, bottom-up inheritance operates in the other direction. This inheritance direction was introduced to map project groups in particular. The aim being, to provide someone coordinating several project groups with the company resources in use by each of the project groups.

NOTE: The direction of inheritance is only taken into account in relation to the inheritance of company resources. The direction of inheritance does not have any effect on the selection of the manager responsible. The manager with a parent role is always
responsible for all child roles.

The effect on the allocation of company resources is explained in the following example for assigning an application.

**Example: Assigning company resources top-down**

In the diagram above a section of a company’s structure is illustrated. In addition, software applications are listed that are assigned to the respective department. An employee in dealer sales is assigned all the software applications that are allocated to their department and all those on the entire organization path. In this case, they are email, text processing, address management and internet software.

**Figure 1: Assignment through top-down inheritance**

```
Entire Organisation
  • Mail
  • Text processing

Administration
Marketing
Sales
  • Address administration

Direct Sales
Dealer Sales
  • Internet software

All Software
  • Mail
  • Text processing
  • Address administration
  • Internet software
```

**Example: Assigning company resources bottom-up**

The next figure shows bottom-up inheritance based on a project framework. In addition, software applications are listed that are assigned to the respective project group. An employee from the "Project lead" project group receives software applications from the project group as well as those from the projects groups below. In this case, it is project management, CASE tool, development environment, assembler tool, and prototyping tool.
Discontinuing inheritance

There are particular cases where you may not want to have inheritance over several hierarchical levels. That is why it is possible to discontinue inheritance within a hierarchy. The point at which the inheritance should be discontinued within a hierarchy is specified by the **Block inheritance** option. The effects of this depend on the chosen direction of inheritance.

- Roles marked with the **Block inheritance** option do not inherit any assignments from parent levels in top-down inheritance. It can, however, pass on its own directly assigned company resources to lower level structures.
- In bottom-up inheritance, the role labeled with the “Block inheritance” option inherits all assignments from lower levels in the hierarchy. However, it does not pass any assignments further up the hierarchy.

The **Block inheritance** option does not have any effect on the calculation of the manager responsible.
Example: Discontinuing inheritance top-down

If the Block inheritance option is set for the "Sales" department in the top-down example, it results in sales employees only being assigned the "Address management" software and employees in the "Dealer sales" department inherit the "Address management" and "Internet" software. Software applications in the "Entire organization" department are however, assigned to employees in the "Sales" and "Dealer sales" departments.

Figure 3: Discontinuing inheritance top-down

Example: Discontinuing inheritance bottom-up

An employee from the "Programming" project group receives software applications from the project group as well as those from the projects groups below. In this case, the development environment, assembler tool and the prototyping tool. If the "Programming" project group has labeled with the Block inheritance option, it no longer passes down inheritance. As a result, only the CASE tool is assigned to employees in the "Project lead" project group along with the software application project management. Software applications from the "Programming", "System programming", and "Interface design" projects groups are not distributed to the project lead.

Basic principles for assigning company resources

You can assign company resources to employees, devices, and workdesks in the One Identity Manager. You can use different assignments types to assign company resources. Assignments types are:

- Direct company resource assignments
- Indirect company resource assignments
- Assigning company resources through dynamic roles
- Assigning company resources through IT Shop requests
Direct company resource assignments

Direct assignment of company resources results from the assignment of a company resource to an employee, device, or workdesk, for example. Direct assignment of company resources makes it easier to react to special requirements.

Figure 5: Schema of a direct assignment based on the example of an employee

Indirect company resource assignments

In the case of indirect assignment of company resources, employees, devices, and workdesks are arranged in departments, cost centers, locations, business roles, or application roles. The total of assigned company resources for an employee, device, or workdesk is calculated from the position within the hierarchies, the direction of inheritance (top-down or bottom-up) and the company resources assigned to these roles. In the Indirect assignment methods a difference between primary and secondary assignment is taken into account.

Figure 6: Schema of an indirect assignment based on the employee example

Related topics

- Secondary assignment on page 16
- Primary assignment on page 17

Secondary assignment

You make a secondary assignment by classifying an employee, a device, or a workdesk within a role hierarchy. Secondary assignment is the default method for assigning and inheriting company resources through roles. In the role classes for departments, locations,
cost centers, business roles, and application roles, specify whether a secondary assignment of company resources to employees, device, and workdesk is possible.

**Figure 7: Secondary assignment inheritance schema**

Related topics

- Permitting assignments of employees, devices, workdesks, and company resources to roles on page 28

**Primary assignment**

You make a primary assignment using a department, cost center, or location foreign key reference in employee, device and workdesk objects. To do this, use the role fields on the employee, device, and workdesk main data forms. Primary assignment inheritance can be enabled through configuration parameters. Primary assignment is enabled by default for employee objects.
NOTE: Changes to the configuration parameter result in the inheritance data being recalculated! That means: if the primary assignment is disabled at a later date, the inheritance data created in this way will be removed from the database.

### Assigning company resources through dynamic roles

Assignment through dynamic roles is a special case of indirect assignment. Dynamic roles are used to specify role memberships dynamically. Employees, devices, and workdesks are not permanently assigned to a role, just when they fulfill certain conditions. A check is performed regularly to assess which employees, devices, or workdesks fulfill these conditions. The means the role memberships change dynamically. For example, company resources can be assigned dynamically to all employees in a department in this way; if an employee leaves the department they immediately lose the resources assigned to them.

**Related topics**

- [Dynamic roles](#) on page 34

### Assigning company resources through IT Shop requests

Assignment through the IT Shop is a special case of indirect assignment. Add employees to a shop as customers so that company resources can be assigned through IT Shop requests. All company resources assigned as product to this shop can be requested by the customers. Requested company resources are assigned to the employees after approval is granted. Role memberships can be requested through the IT Shop as well as company resources.
Basics of calculating inheritance

Objects assigned through inheritance are calculated by the DBQueue Processor. Tasks are added to the DBQueue when assignments relevant to inheritance are made. These tasks are processed by the DBQueue Processor and result in follow-on tasks for the DBQueue or in processes for process component HandleObjectComponent in the Job queue. Resulting assignments of permissions to user accounts in the target system are inserted, modified, or deleted during process handling.

Detailed information about this topic

- Calculating inheritance by hierarchical roles on page 21
- Calculation of assignments on page 22
Calculating inheritance by hierarchical roles

Employees, devices, and workdesks can only be members in roles that are extensions of the BaseTree table. These role are display in views, each of which represents a certain of the BaseTree table. To map company structures, the One Identity Manager data model obtains the following views:

Table 2: BaseTree table views

<table>
<thead>
<tr>
<th>View</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Department</td>
<td>Graphical representation of departments</td>
</tr>
<tr>
<td>Locality</td>
<td>Graphical representation of locations</td>
</tr>
<tr>
<td>PROFITCENTER</td>
<td>Graphical representation of cost centers</td>
</tr>
<tr>
<td>ORG</td>
<td>Graphical representation of business roles</td>
</tr>
<tr>
<td>AERole</td>
<td>Application role mapping</td>
</tr>
</tbody>
</table>

**NOTE:** Because the views are subsets of the BaseTree table, all the inheritance mechanisms described below also apply to the views.

Inheritance comes from the BaseTree table. The BaseTree table can map any number of hierarchical role structures using the UID_Org - UID_ParentOrg relationship. These are stored in the BaseTreeCollection table. All the roles inherited from the given role are listed and, depending on their subset of the table BaseTree there is a corresponding, so-called *Collection table containing a subset of the role hierarchy.

The following relations apply in the BaseTreeCollection table:

- UID_Org is the role that inherits.
- UID_ParentOrg is the role that passes down inheritance.

This principle also applies to bottom-up trees that pass inheritance from bottom to top, even if the parent relationship from the BaseTree table appears to be reversed.

Each role inherits from itself.

Each role in a role hierarchy must be related to the OrgRoot table (Role classes). OrgRoot is the anchor for role hierarchies. A role hierarchy is always mapped for one role class only. Roles from different role classes may not be in one and the same role hierarchical or point to each other through a parent-child relationship.
A role inherits everything that is assigned to its parents in the role hierarchy including those it assigned to itself. If the number of roles from which the role has inherited something changes, the assigned objects are recalculated for all members of this role. If the number of assigned objects of one class changes, the objects assigned in this class are recalculated for all members of the role. If a software application is assigned to a parent role, the members of the BaseTreeHasApp table are recalculated.

The members of a role inherit all their assignments through primary and secondary role structures in accordance with the BaseTree table and also previous structures in accordance with the BaseTreeCollection table.

**Calculation of assignments**

When inheritance is calculated, an entry is made for each assignment in the corresponding assignment table. Each table, in which assignments are mapped, has an XOrigin column. The origin of an assignment is stored in this column as a bit field. Each time an entry is made in the assignment table, the bit position is changed according to the assignment type. Each assignment type changes only its allocated bit position.

That means:

- Bit 0: direct assignment.
- Bit 1: indirect assignment but not through a dynamic role.
- Bit 2: assignment through a dynamic role.
- Bit 3: assignment through an assignment request.
- Bit 4: module specific bit. For detailed information, see the administration guide of the module in which the bit is used.

If an assignment is inherited through a role hierarchy, bit 1 is set on the inherited assignment. Inherited assignments are consequently, always assigned indirectly even if they were originally created directly though dynamic role or an assignment request.

**Example:**

An Active Directory group assignment was requested for the "Europe" location. The "Madrid" sub-location inherits this assignment. In the LocalityHasADSGroup table, XOrigin is set as follows:

- Location "Europe": XOrigin='8' (assignment resource)
- Location "Madrid": XOrigin='2' (indirect assignment)

The XIsInEffect column shows whether an assignment is in effect. For example, if an employee is deactivated, marked for deletion, or classified as a security risk, inheritance of company resources can be prohibited for this employee. The group assignment is maintained but the assignment has no effect.

DBQueue Processor monitors changes to the XOrigin column. The XIsInEffect column is recalculated when changes are made to the value in XOrigin.

**Table 3: Possible values for column XOrigin**

### Preparing hierarchical roles for company resource assignments

One Identity Manager supplies a configuration, which support immediate usage of hierarchical roles for departments, cost centers, locations, and application roles. However, it may be necessary to make additional role assignments depending on the company structure.

You should check the following settings and make adjustments as required:

- Specify whether employees, devices, and workdesks and company resources may be assigned to roles.
  Employee, device, workdesk, and company resource assignments are predefined for departments, cost centers, location, and application roles. The configuration of application role assignments cannot be changed.

- Define the direction of inheritance with the hierarchy.
  Top down inheritance is defined for departments, cost centers, locations, and application roles.

- Limit inheritance for specific roles if necessary.
  You can specify whether inheritance of company resources can be limited for single employees, devices, or workdesks.

- If required, define roles that are mutually exclusive.
  By specifying conflicting roles, you can prevent employees, devices, or workdesks being added to roles which contain mutually excluding company resources.
**Detailed information about this topic**

**Possible assignments of company resources through roles**

Employees, devices, and workdesks can inherit company resources though indirect assignment. To do this, employees, devices, and workdesks may be members of as many roles as required. Employees, devices, and workdesks obtain the necessary company resources through defined rules.

To assign company resources to roles, apply the appropriate tasks to the roles.

The following table shows the possible assignments of company resources to employees, workdesks, and devices using roles.

**NOTE:** Company resources are defined in the One Identity Manager modules and are not available until the modules are installed.

**Table 4: Possible assignments of company resources through roles**

Permitting assignments of employees, devices, workdesks, and company resources to roles

The default method for assigning company resources is through secondary assignment. For this, employees, devices, and workdesks as well as company resources are added to roles through secondary assignment.
Use role classes to specify how and if employees, devices, workdesks, and company resource are permitted as secondary assignments to roles. Role classes form the basis of mapping hierarchical roles in One Identity Manager. Role classes are used to group similar roles together. The following role classes are available by default in the One Identity Manager:

- Department
- Cost center
- Location
- Application role

Secondary assignment of objects to role in a role class is defined by the following options:

- **Assignments allowed**: This option specifies whether assignments of respective object types to roles of this role class are allowed in general.

- **Direct assignments allowed**: Use this option to specify whether respective object types can be assigned directly to roles of this role class. Set this option if, for example, resources are assigned to departments, cost centers, or locations over the assignment form in the Manager.

  **NOTE**: If this option is not set, the assignment of each object type is only possible through requests in the IT Shop, dynamic roles, or system roles.

**Example:**

To assign employees directly to a department in the Manager, enable the **Assignment allowed** and the **Direct assignment allowed** options on the **Employees** entry in the **Department** role class.

If employees can only obtain membership in a department through the IT Shop, enable the **Assignment allowed** option but not the **Direct assignment allowed** option on the **Employees** entry in the **Department** role class. A corresponding assignment resource must be available in the IT Shop.

**NOTE**: Employee, device, workdesk, and company resource assignments are predefined for departments, cost centers, location, and application roles. The configuration of application role assignments cannot be changed.

**To configure assignments to roles of a role class**

1. In the Manager, select role classes in the **Organizations > Basic configuration data > Role classes** category.
2. Select the **Configure role assignments** task.
3. Use the **Allow assignments** column to specify whether assignment is generally allowed.
NOTE: You can only reset the Assignment allowed option if there are no assignments of the respective objects to roles of this role class and none can arise through existing dynamic roles.

4. Use the Allow direct assignments column to specify whether a direct assignment is allowed.

   NOTE: You can only reset the Direct assignment allowed option if there are no direct assignments of the respective objects to roles of this role class.

5. Save the changes.

### Blocking inheritance using roles

There are particular cases where you may not want to have inheritance over several hierarchical levels. That is why it is possible to discontinue inheritance within a hierarchy. The effects of this depend on the chosen direction of inheritance.

- Roles marked with the Block inheritance option do not inherit any assignments from parent levels in top-down inheritance. It can, however, pass on its own directly assigned company resources to lower level structures.
- In bottom-up inheritance, the role labeled with the Block inheritance option inherits all assignments from lower levels in the hierarchy. However, it does not pass any assignments further up the hierarchy.

**To discontinue inheritance for departments, cost centers, or locations**

1. In the Manager, in the Organizations category, select a department, cost center or location.
2. Select the Change main data task.
3. Set the Block inheritance option.
4. Save the changes.

NOTE: In the case of application roles, inheritance can only be discontinued for custom application roles. For detailed information about application roles, see the One Identity Manager Authorization and Authentication Guide.

### Related topics

- Discontinuing inheritance on page 13
- Preventing employees, devices, or workdesks from inheriting individual roles on page 31
- Preventing inheritance to individual employees, devices, or workdesks on page 31
Preventing employees, devices, or workdesks from inheriting individual roles

Company resource inheritance for single roles can be temporarily prevented. You can use this behavior, for example, to assign all required company resources to a role. Inheritance of company resources does not take place, however, unless inheritance is permitted for the role, for example, by running a defined approval process.

To prevent inheritance for departments, cost centers, or locations

1. In the Manager, in the Organizations category, select a department, cost center or location.
2. Select the Change main data task.
3. Set one or more of the following options:
   - To prevent employees from inheriting, set the Employees do not inherit option.
   - To prevent devices from inheriting, set the Devices do not inherit option.
   - To prevent workdesks from inheriting, set the Workdesks do not inherit option.
4. Save the changes.

NOTE: This option cannot be configured for application roles. For detailed information about application roles, see the One Identity Manager Authorization and Authentication Guide.

Related topics
- Blocking inheritance using roles on page 30
- Preventing inheritance to individual employees, devices, or workdesks on page 31

Preventing inheritance to individual employees, devices, or workdesks

Inheritance of company resources can be prevented for single employees, devices, or workdesks. You can use this behavior to correct data after importing employees before and then apply inheritance.

To prevent an employee from inheriting

1. In the Manager, select the employee in the Employees category.
2. Select the Change main data task.
3. Set the No inheritance option.
The employee does not inherit company resources through roles.

**NOTE:** This option does not have any effect on direct assignments. Company resource direct assignments remain assigned.

4. Save the changes.

**To prevent an device from inheriting**

1. In the Manager, select the device in the **Devices & Workdesks > Devices** category.
2. Select the **Change main data** task.
3. Set the **No inheritance** option.
   
   The device does not inherit company resources through roles.

   **NOTE:** This option does not have any effect on direct assignments. Company resource direct assignments remain assigned.

4. Save the changes.

**To prevent a workdesk from inheriting**

1. In the Manager, select the workdesk in the **Devices & Workdesks > Workdesks** category.
2. Select the **Change main data** task.
3. Set the **No inheritance** option.
   
   The workdesk does not inherit company resources through roles.

   **NOTE:** This option does not have any effect on direct assignments. Company resource direct assignments remain assigned.

4. Save the changes.

**Related topics**

- Blocking inheritance using roles on page 30

**Inheritance exclusion: Specifying conflicting roles**

You can define conflicting roles to prevent employees, devices, or workdesks from being assigned to several roles at the same time and from obtaining mutually exclusive company resources through these roles. At the same time, specify which departments, cost centers, and locations are mutually exclusive. This means you may not assign these roles to one and the same employee (device, workdesk).
NOTE: Only roles, which are defined directly as conflicting roles cannot be assigned to the same employee (device, workdesk). Definitions made on parent or child roles do not affect the assignment.

Example:
Cost center B is named as conflicting role to cost center A. Jenna Miller and Hans Peters are members of cost center A. Louise Lotte is a member of cost center B. Hans Peters cannot be assigned to cost center B. Apart from that, One Identity Manager prevents Jenna Miller and Louise Lotte from being assigned to cost center A.

Figure 12: Members in conflicting roles

To configure inheritance exclusion
- In the Designer, set the QER | Structures | ExcludeStructures configuration parameter and compile the database.

NOTE: If you disable the configuration parameter at a later date, model components and scripts that are not longer required, are disabled. SQL procedures and triggers are still carried out. For more information about the behavior of preprocessor relevant configuration parameters and conditional compiling, see the One Identity Manager Configuration Guide.

Related topics
- Specifying inheritance exclusion for departments, cost centers, and locations on page 79
Dynamic roles

Dynamic roles are used to specify role memberships dynamically. Employees, devices, and workdesks are not permanently assigned to a role, just when they fulfill certain conditions. A check is performed regularly to assess which employees (devices or workdesks) fulfill these conditions. The means the role memberships change dynamically. For example, company resources can be assigned dynamically to all employees in a department in this way; if an employee leaves the department they immediately lose the resources assigned to them.

Role memberships through dynamic roles are implemented as indirect, secondary assignments. Therefore secondary assignment of employees, devices, and workdesks to role classes must be permitted. If necessary, further configuration settings need to be made.

Example: Dynamic role functionality

All external employees are added to a new dynamic role. These employees should be assigned to a company resource ABC. The dynamic role is initially defined with the following data:

<table>
<thead>
<tr>
<th>Dynamic role</th>
<th>External employees</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>All external employees</td>
</tr>
<tr>
<td>Object class</td>
<td>PERSON</td>
</tr>
<tr>
<td>Condition</td>
<td>IsExternal = 1</td>
</tr>
<tr>
<td>Department</td>
<td>A_1</td>
</tr>
</tbody>
</table>

The department A_1 is now assigned the resource ABC. All employees who fulfill the condition at the time the dynamic role was defined are assigned to department A_1 and therefore inherit the resource ABC. Employees who fulfill the condition at a later date, are assigned to department A_1 from that moment. Conversely, employees in department A_1 are removed the moment they are no longer known as external.
Employees can excluded automatically from dynamic roles on the basis of a denied attestation or a rule violation. An excluded list is maintained to do this. Excluded lists can also be defined for individual employees. For more information on automatic exclusion in the event of a denied attestation, see the One Identity Manager Attestation Administration Guide. For more information on automatic exclusion in the event of a rule violation, see the One Identity Manager Web Designer Web Portal User Guide.

Employees can, in addition, also become members of the role directly or by assignment request or delegation. These memberships are not restricted by the exclusion list.

**Tips about conditions for dynamic roles**

**IMPORTANT:** If the condition includes a large number of objects to assign, calculating memberships can place a heavy load on the DBQueue Processor and consequently on the database server.

A dynamic role condition is defined as a valid Where clause for database queries and must relate to the selected Person, Hardware, or Workdesk object class.

In the Manager, you have different ways of creating conditions:
You can enter it directly as an SQL query.

You can use the Where clause wizard to create the conditions.

Alternatively, you can enter conditions for employee objects with the filter designer.

**NOTE:** If you select the **For the account with the target system type** or **For the entitlement with target system type** condition type in the filter designer, only columns that are mapped in Unified Namespace and for which the **Display in the filter designer** column property is enabled can be selected.

Using the @UID_Org variable, you can access the role or organization referenced by the dynamic role.

**Example:**

The condition for the dynamic role for employees only takes effect if the employee's location (Person.UID_Locality) matches the location of the assigned role or the organization (BaseTree.UID.UID_OrgLocality).

Where clause extension:

```sql
... and uid_locality = (select b.UID_OrgLocality from BaseTree b where b.UID_Org = @UID_Org)
```

**Example:**

The condition for the dynamic role for employees is only effective if the assigned role or organization have a certain property.

Where clause extension:

```sql
... and exists (select top 1 1
   from BaseTree b
   where b.UID_Org = @UID_Org
   and b.CustomProperty01 = '123')
```

**NOTE:** If you add comments to the condition using the comment characters --, // or %, the DBQueue Processor cannot correctly calculate the dynamic role. The calculation quits with an error. Always use the comment characters /* ... */ to enclose comments.

Creating and editing dynamic roles

You can create dynamic roles for departments, cost centers, locations, business roles, application roles, and IT Shop nodes. This allows you to specify memberships in these roles.

To create a dynamic role

1. In the Manager, select the role for which you want to create a dynamic role.
2. Select the Create dynamic role task.
3. Enter the required main data.
4. Save the changes.

To edit a dynamic role

1. In the Manager, select the role for which the dynamic role was created.
2. Open the role’s overview form.
3. Select the Dynamic roles form element and click on the dynamic role.
4. Select the Change main data task.
5. Edit the data and then save the changes.

Related topics

- For more information about dynamic roles for application roles, see the One Identity Manager Authorization and Authentication Guide.

Testing dynamic role conditions

You should test which objects fulfill the given condition before you save a dynamic role.

**NOTE:** This task is only visible when the dynamic role condition is displayed as an SQL query.
To test the SQL condition for a dynamic role

1. In the Manager, select the role for which the dynamic role was created.
2. Open the role's overview form.
3. Select Dynamic roles and click on the dynamic role.
4. Select Change main data.
5. Click (Edit SQL) on the form.
   This displays the condition as SQL query.
6. Select the Test condition task.
   On the main data form, in the Test result field, all objects determined by the condition are displayed.

Calculating role memberships for dynamic roles

Table 5: Configuration parameters for calculating dynamic roles

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>QER</td>
<td>Structures</td>
</tr>
<tr>
<td>QER</td>
<td>Structures</td>
</tr>
<tr>
<td>QER</td>
<td>Structures</td>
</tr>
<tr>
<td>QER</td>
<td>Structures</td>
</tr>
</tbody>
</table>

In order to calculate role memberships, One Identity Manager tests every dynamic role to ensure that:
There is at least one object that satisfies the condition but is not assigned to the role

There is at least one object that does not satisfy the condition but is assigned to the role

The exclusion list was changed

If one of the conditions is fulfilled, a request to add or delete memberships is sent to the DBQueue Processor. When the dynamic roles are tested, employee objects that are marked for deletion are:

- Not added to roles through dynamic roles even if the miscellaneous condition is fulfilled.
- Removed from the role even if the miscellaneous condition should be fulfilled

Tasks for recalculating memberships are set up depending on the configuration parameter settings by:

- Cyclical checking using a schedule

  In the default installation of One Identity Manager, the **Dynamic roles check** schedule is already defined. All dynamic role memberships are checked using this schedule and recalculation requests are sent to the DBQueue Processor if necessary. Checks are made at predefined intervals.

  Use the Designer to customize schedules or set up new ones to meet your requirements. For more information, see the *One Identity Manager Operational Guide*.

- Immediately an object has changed

  Memberships are immediately checked by the DBQueue Processor and changed as necessary when object properties are changed. To use this function, in the Designer, set the QER | Structures | DynamicGroupCheck | CalculateImmediatelyPerson, QER | Structures | DynamicGroupCheck | CalculateImmediatelyHardware, and QER | Structures | DynamicGroupCheck | CalculateImmediatelyWorkdesk configuration parameters.

## Calculating role memberships for dynamic roles instantly

By default, calculation of role membership is controlled by schedules. You can also run the calculation for a single dynamic role immediately and independently of the scheduled calculation.
To calculate role membership immediately

1. In the Manager, select the role for which the dynamic role was created.
2. Open the role’s overview form.
3. Select Dynamic roles and click on the dynamic role.
4. Select the Change main data task.
5. Select the Start recalculation immediately task and close the prompt with OK.
   A processing task for the DBQueue Processor is set in the DBQueue.

Detailed information about this topic

- Calculating role memberships for dynamic roles on page 38

Displaying the dynamic role overview

You can see the most important information about a dynamic role on the overview form.

To obtain an overview of a dynamic role

1. In the Manager, select the role for which the dynamic role was created. The department, for example.
2. Open the role’s overview form.
3. Select Dynamic roles and click on the dynamic role.
4. Select the Dynamic role overview task.
5. Select the report Show overview.
   The report provides a summary of key information about a dynamic role, including the schedule, excluded employees, and recalculation properties.

Main data for dynamic roles

Enter the following data for a dynamic role.

Table 6: Dynamic role main data

Departments, cost centers, and locations

Departments, cost centers, locations, and business roles are each mapped to their own hierarchy under Organizations. This is due to their special significance for daily work schedules in many companies. Various company resources can be assigned to organizations, for example, permissions in different SAP systems or Azure Active Directory tenants. You can add employees to single roles as members. Employees obtain their company resources through these assignments when the One Identity Manager is appropriately configured.

| **Approvers (IT) for organizations** | IT role approvers must be assigned to the **Identity Management | Organizations | Role approvers (IT)** application role or a child application role. Users with this application role:  
- Are IT role approvers for the IT Shop.  
- Approve request from departments, cost centers, and locations for which they are responsible. |
| **One Identity Manager administrators** | One Identity Manager administrator and administrative system users  
Administrative system users are not added to application roles.  
One Identity Manager administrators:  
- Create customized permissions groups for application roles for role-based login to administration tools in the Designer as required.  
- Create system users and permissions groups for non role-based login to administration tools in the Designer as required.  
- Enable or disable additional configuration parameters in the Designer as required.  
- Create custom processes in the Designer as required.  
- Create and configure schedules as required.  
- Create and configure password policies as required. |

### Basic information for departments, cost centers, and locations

The following basic information is relevant for building up hierarchical roles in One Identity Manager.

- **Configuration parameters**
  
  Use configuration parameters to configure the behavior of the system's basic settings. One Identity Manager provides default settings for different configuration parameters. Check the configuration parameters and modify them as necessary to suit your requirements.

Configuration parameters are defined in the One Identity Manager modules. Each One Identity Manager module can also install configuration parameters. In the Designer, you can find an overview of all configuration parameters in the **Base data > General > Configuration parameters** category.
- **Role classes**
  Role classes form the basis of mapping hierarchical roles in One Identity Manager. Role classes are used to group similar roles together.

- **Role types**
  Create role types in order to classify roles. Roles types can be used to map roles in the user interface, for example.

- **Functional areas**
  To analyze rule checks for different areas of your company in the context of identity audit, you can set up functional areas. Functional areas can be assigned to roles. You can enter criteria that provide information about risks from rule violations for functional areas and roles. Moreover, functional areas can be used during peer group analysis of requests or attestation cases.

- **Attestors**
  In One Identity Manager you can assign departments, cost centers, and locations to employees who can be brought in as attestors in attestation cases, provided that the approval workflow is set up accordingly. To do this, assign the departments, cost centers, and locations to application roles for attestors. For detailed information about attestation, see the *One Identity Manager Attestation Administration Guide*.

  A default application role for attestors is available in One Identity Manager. You may create other application roles as required. For detailed information about application roles, see the *One Identity Manager Authorization and Authentication Guide*.

- **Role approvers and role approvers (IT)**
  In One Identity Manager you can assign departments, cost centers and locations to employees who can be brought in as approvers in approval processes for IT Shop requests, provided that the approval workflow is set up accordingly. To do this, assign the departments, cost centers, and locations to application roles for role approvers. For more information, see the *One Identity Manager IT Shop Administration Guide*.

  Default application roles for approvers and approvers (IT) are available in One Identity Manager. You may create other application roles as required. For detailed information about implementing and editing application roles, see the *One Identity Manager Authorization and Authentication Guide*.

Role classes for departments, cost centers, and locations

Role classes form the basis of mapping hierarchical roles in One Identity Manager. Role classes are used to group similar roles together. The direction of inheritance is specified by the role class. In addition, assignments that are allowed to be made to individual roles of this role class are specified in a role class.

The following role classes are provided by default for mapping organizations in One Identity Manager:

- Department
- Cost center
- Location

Top down inheritance is defined for departments, cost centers, locations, and application roles. Employees, devices, workdesks, and company resource assignments are predefined for departments, cost centers, and locations. You can edit these role class assignments.

Related topics

- Inheritance directions within a hierarchy on page 11
- Permitting assignments of employees, devices, workdesks, and company resources to roles on page 28

Assigning role types to role classes for departments, cost centers, and locations

To assign a role type to a role class

1. In the Manager, select the Organizations > Basic configuration data > Role classes category.
2. In the result list, select the role class.
3. Select the Assign role types task.
4. In the Add assignments pane, assign role types.

TIP: In the Remove assignments pane, you can remove assigned role types.

To remove an assignment

- Select the role type and click ✗.
Related topics

- Creating role types for departments, cost centers, and locations on page 50
- Assigning role classes to role types for departments, cost centers, and locations on page 50

Role types for departments, cost centers, and locations

To achieve better classification, you can define role types and assign them to role classes and roles. The following restrictions apply:

- You can assign a role type to several role classes.
- If you assign role types to a role class you can only select these role types for the roles of this role class. Other role types are not available for selection.
- If you do not assign a role type to a role class, you can only use role types that are not assigned to any other role class for roles in this role class.
- The Business role role type is predefined. This role type cannot be assigned to the Department, Cost center, or Location role classes. Assign this role type to role classes that map business roles.

Example:
The Business role role type is predefined. The Region, Country, Sales, and Development role types are also created.

- The Business roles role type is assigned to the External projects role class.
  The Business roles role type can also be given to roles of this role class.
- The Business roles, Region, and Country role types are assigned to the Employee role class.
  The Business roles, Region, and Country role types can also be given to roles of this role class.
- The Region and Country role types are assigned to the Location role class.
  The Region and Country role types can also be given locations.
- The Cost center and Department role classes are not assigned any role types.
The Sales and Development role types can also be given to cost centers and departments.

Creating role types for departments, cost centers, and locations

To create role types
1. In the Manager, select the Organizations > Basic configuration data > Role types category.
2. Click in the result list.
3. Enter the following information:
   - Role type: Role type name. Translate the given text using the button.
   - Description: (Optional) Text field for additional explanation.
   - No multiple assignment of employees: This option does not work for departments, cost centers, and locations.
4. Save the changes.

Assigning role classes to role types for departments, cost centers, and locations

To assign role classes to a role type
1. In the Manager, select the Organizations > Basic configuration data > Role types category.
2. Select the role type in the result list.
3. Select the Assign role classes task.
4. In the Add assignments pane, assign the organizations:
   - On the Departments tab, assign departments.
   - On the Locations tab, assign locations.
   - On the Cost centers tab, assign cost centers.

   **TIP:** In the Remove assignments pane, you can remove assigned organizations.

To remove an assignment
1. Select the organization and double-click.
5. Save the changes.

Functional areas for departments, cost centers, and locations

To analyze rule checks for different areas of your company in the context of identity audit, you can set up functional areas. Functional areas can be assigned to hierarchical roles and service items. You can enter criteria that provide information about risks from rule violations for functional areas and hierarchical roles. To do this, you specify how many rule violations are permitted in a functional area or a role. You can enter separate assessment criteria for each role, such as a risk index or transparency index.

Moreover, functional areas can be replaced by peer group analysis during request approvals or attestation cases.

Example: Use of functional areas

To assess the risk of rule violations for cost centers. Proceed as follows:

1. Set up functional areas.
2. Assign cost centers to the functional areas.
3. Define assessment criteria for the cost centers.
4. Specify the number of rule violations allowed for the functional area.
5. Assign compliance rules required for the analysis to the functional area.
6. Use the One Identity Manager report function to create a report that prepares the result of rule checking for the functional area by any criteria.

To create or edit a functional area

1. In the Manager, select the Organizations > Basic configuration data > Functional areas category.
2. In the result list, select a function area and run the Change main data task.
   - OR -
   Click in the result list.
3. Edit the function area main data.
4. Save the changes.

Enter the following data for a functional area.
### Table 9: Functional area properties

For more detailed information about rule checking, see the One Identity Manager Compliance Rules Administration Guide. For more information about peer group analysis, see the One Identity Manager IT Shop Administration Guide and the One Identity Manager Attestation Administration Guide.

### Attestors for departments, cost centers, and locations

| NOTE: This function is only available if the Attestation Module is installed. |
In One Identity Manager you can assign departments, cost centers, and locations to employees who can be brought in as attestors in attestation cases, provided that the approval workflow is set up accordingly. To do this, assign the departments, cost centers, and locations to application roles for attestors. For detailed information about attestation, see the One Identity Manager Attestation Administration Guide.

A default application role for attestors is available in One Identity Manager. You may create other application roles as required. For detailed information about application roles, see the One Identity Manager Authorization and Authentication Guide.

4. Save the changes.

**Approvers and approvers (IT) for departments, cost centers, and locations**

In One Identity Manager you can assign departments, cost centers and locations to employees who can be brought in as approvers in approval processes for IT Shop requests, provided that the approval workflow is set up accordingly. To do this, assign the departments, cost centers, and locations to application roles for role approvers. For more information, see the *One Identity Manager IT Shop Administration Guide*.

Default application roles for approvers and approvers (IT) are available in One Identity Manager. You may create other application roles as required. For detailed information about implementing and editing application roles, see the *One Identity Manager Authorization and Authentication Guide*.

Setting up IT operating data for departments, cost centers, and locations

To create user accounts with the Full managed manage level, the required IT operating data must be determined. The operating data required to automatically supply an employee with IT resources is shown in the departments, locations, or cost centers. An employee is assigned a primary location, primary department, or primary cost center. The necessary IT operating data is ascertained from these assignments and used in creating the user accounts. Default values are used if valid IT operating data cannot be found over the primary roles.

You can also specify IT operating data directly for a specific account definition.

Example:

Normally, each employee in department A obtains a default user account in the domain A. In addition, certain employees in department A obtain administrative user accounts in the domain A.

Create an account definition A for the default user account of the domain A and an account definition B for the administrative user account of domain A. In the IT operating data mapping rule for the account definitions A and B, specify the Department property in order to determine the valid IT operating data.

Specify the effective IT operating data of department A for the domain A. This IT operating data is used for standard user accounts. In addition, for department A, specify the effective IT operating data of account definition B. This IT operating data is used for administrative user accounts.

For more information, see the One Identity Manager Target System Base Module Administration Guide.

To define IT operating data

1. In the Manager, select the Organizations > <role class> category.
2. Select the role in the result list.
3. Select the Edit IT operating data task.
4. Click Add and enter the following data.
   - Effects on: Specify an IT operating data application scope. The IT operating data can be used for a target system or a defined account definition.
To specify an application scope

a. Click next to the field.
b. Under Table, select the table that maps the target system for select the TSBAccountDef table or an account definition.
c. Select the specific target system or account definition under Effects on.
d. Click OK.

- **Column**: Select the user account property for which the value is set.
  
  In the menu, you can select the columns that use the TSB_ITDataFromOrg script in their template. For more information about this, see the One Identity Manager Target System Base Module Administration Guide.

- **Value**: Enter a fixed value to assign to the user account's property.

5. Save the changes.

It operating data for target systems

The IT operating data necessary in the One Identity Manager default configuration for automatically creating or changing employee user accounts and mailboxes in the target system is itemized in the following table.

| NOTE: | IT operating data is dependent on the target system and is contained in One Identity Manager modules. The data is not available until the modules are installed. |

**Modify IT operating data**

If IT operating data changes, you must transfer the changes to the existing user accounts. To do this, templates must be rerun on the affected columns. Before you can run the templates, you can check what effect a change to the IT operating data has on the existing
user accounts. You can decide whether the change is transferred to the One Identity Manager database in the case of each affected column in each affected database.

**Prerequisites**

- The IT operating data of a department, a cost center, or a location have been changed.
- OR -
- The default values in the IT operating data template were modified for an account definition.

**NOTE:** If the assignment of an employee to a primary department, cost center, or to a primary location changes, the templates are automatically run.

**To run the template**

1. In the Manager, select the `<target system type>` > Basic configuration data > Account definitions > Account definitions category.
2. Select an account definition in the result list.
3. Select the Run templates task.
   This displays a list of all user accounts that were created with the selected account definition and whose properties were changed by modifying the IT operating data. That means:
   - **Old value:** Value of the object property before changing the IT operating data.
   - **New value:** Value of the object property after changing the IT operating data.
   - **Selection:** Specifies whether the new value is copied to the user account.
4. Mark all the object properties in the selection column that will be given the new value.
5. Click Apply.
   The templates are applied to all selected user accounts and properties.

**Assigning employees, devices, and workdesks to departments, cost centers, and locations**

Assign employees, devices, and workdesks to departments, cost centers, and locations. Employees, devices, and workdesks can obtain their company resources through these organizations.
To add employees, devices, and workdesks to a hierarchical role

1. In the Manager, select the Organizations > <role class> category.
2. Select the role in the result list.
3. Select the appropriate task.
   - Assign employees
   - Assign devices
   - Assign workdesks
4. In the Add assignments pane, assign objects.
   **TIP:** In the Remove assignments pane, you can remove object assignments.
   - Select the object and double-click ✔️.
5. Save the changes.
   **TIP:** Use dynamic roles to assign employees, devices, and workdesks to departments, cost centers, and locations automatically.

Assigning company resources to departments, cost centers, and locations

The default method of assigning employees, devices, and workdesks is indirect assignment. This allocates an employee, a device or a workdesk to departments, cost centers, or locations. The total of assigned company resources for an employee, a device or workdesk is calculated from their position within the hierarchy, the direction of inheritance and the company resources assigned to these roles.

Indirect assignment is divided into:
Secondary assignment
You make a secondary assignment by classifying an employee, a device, or a workdesk within a role hierarchy. Secondary assignment is the default method for assigning and inheriting company resources through roles.

**IMPORTANT:** You use role classes to specify whether a secondary assignment of company resources is possible.

If an employee, device or a workdesk fulfills the requirements of a dynamic role, the object is added dynamically to the corresponding company structure and can obtain company resources through it.

Primary assignment
You make a primary assignment using a department, cost center, or location foreign key reference in employee, device and workdesk objects. Primary assignment inheritance can be enable through configuration parameters.

You must assign company resources to departments, cost centers, or locations so that employees, devices, and workdesks can inherit company resources. The following table shows the possible company resources assignments.

**NOTE:** Company resources are defined in the One Identity Manager modules and are not available until the modules are installed.

Creating dynamic roles for departments, cost centers, and locations

Use this task to define dynamic roles for single departments, cost centers or location. This allows you to specify memberships in these roles.

**NOTE:** Create dynamic role is only set for departments, cost centers, and locations, which do not have Dynamic roles not allowed set.

**To create a dynamic role**

1. In the Manager, select the Organizations > <role class> category.
2. Select the role in the result list.
3. Select the Create dynamic role task.
4. Enter the required main data.
5. Save the changes.

**To edit a dynamic role**

1. In the Manager, select the Organizations > <Role class> > Dynamic roles category.
2. Select the role in the result list.
3. Open the role's overview form.
4. Select Dynamic roles and click on the dynamic role.
5. Select the Change main data task.
6. Edit the dynamic role's main data.
7. Save the changes.

**Related topics**

- Dynamic roles on page 34
- Creating and editing dynamic roles on page 37

- General main data for cost centers on page 59
- General main data for locations on page 63

**Dynamic roles with incorrectly excluded employees**

In the Manager, you can obtain an overview of all the dynamic roles with conflicting entries in the exclude list. This means that for at least one item in the list the following applies:

- The dynamic role condition does not apply.

  For example, this might occur if the dynamic role condition was changed after a person was entered in the exclude list.
  - OR -

- The excluded person is also assigned to the role in another way such as through inheritance or direct assignment.

Check these entries and correct the assignments.

*To check conflicting entries of departments, locations, or cost centers in the exclusion list*

1. In the Manager, select the Organizations > Troubleshooting > Dynamic roles with potentially incorrect excluded employees category.
2. Select the dynamic role in the result list.
3. Select the Exclude employees task.

   In the exclusion list you can see which employees are affected by the given conditions.

**Related topics**

- Main data of exclude lists for dynamic roles on page 42
- Removing employees from the exclusion list on page 42
- Creating dynamic roles for departments, cost centers, and locations on page 76
Assign organizations

Use this task to map the relationships of a department, cost center of a location to other roles. This task has the same effect as assigning a department, cost center, or location on the role main data form. The assignment is entered in the respective foreign key column in the base table.

To assign a cost center or location to departments
1. In the Manager, select the Organizations > Cost centers or the Organizations > Locations category.
2. Select the role in the result list.
3. Select the Assign organizations task.
4. Select the Departments tab.
5. In the Add assignments pane, assign departments.
   The selected role is primarily assigned to all departments as a cost center or location.
6. Save the changes.

To assign a department or a location to cost centers
1. In the Manager, select the Organizations > Departments or the Organizations > Locations category.
2. Select the role in the result list.
3. Select the Assign organizations task.
4. Select the Cost centers tab.
5. In the Add assignments pane, assign cost centers.
   The selected role is primarily assigned to all cost centers as a department or location.
6. Save the changes.

To assign a department or a cost center to locations
1. In the Manager, select the Organizations > Departments or the Organizations > cost centers category.
2. Select the role in the result list.
3. Select the Assign organizations task.
4. Select the Locations tab.
5. In the Add assignments pane, assign locations.
   The selected role is primarily assigned to all locations as a department or cost center.
6. Save the changes.
Specifying inheritance exclusion for departments, cost centers, and locations

You can define conflicting roles to prevent employees, devices, or workdesks from being assigned to several roles at the same time and from obtaining mutually exclusive company resources through these roles. At the same time, specify which departments, cost centers, and locations are mutually exclusive. This means you may not assign these roles to one and the same employee (device, workdesk).

**NOTE:** Only roles, which are defined directly as conflicting roles cannot be assigned to the same employee (device, workdesk). Definitions made on parent or child roles do not affect the assignment.

**To configure inheritance exclusion**

- In the Designer, set the **QER | Structures | ExcludeStructures** configuration parameter and compile the database.

  **NOTE:** If you disable the configuration parameter at a later date, model components and scripts that are not longer required, are disabled. SQL procedures and triggers are still carried out. For more information about the behavior of preprocessor relevant configuration parameters and conditional compiling, see the **One Identity Manager Configuration Guide**.

**To define inheritance exclusion for a departments**

1. In the Manager, select the **Organizations > Departments** category.
2. Select the department in the result list.
3. Select **Edit conflicting departments**.
4. In the **Add assignments** pane, assign departments that are mutually exclusive to the selected department.
   - OR -
   In the **Remove assignments** pane, remove the departments that are no longer mutually exclusive.
5. Save the changes.

**To define inheritance exclusion for a cost center**

1. In the Manager, select the **Organizations > Cost centers** category.
2. Select the cost center in the result list.
3. Select **Edit conflicting cost centers**.
4. In the **Add assignments** pane, assign cost centers that are mutually exclusive to the selected cost center.
- OR -

In the Remove assignments pane, remove the cost centers that are no longer mutually exclusive.

5. Save the changes.

**To define inheritance exclusion for a cost center**

1. In the Manager, select the Organizations > Locations category.
2. Select the location in the result list.
3. Select Edit conflicting locations.
4. In the Add assignments pane, assign locations that are mutually exclusive to the selected location.
   - OR -
   In the Remove assignments pane, remove the locations that are no longer mutually exclusive.
5. Save the changes.

**Detailed information about this topic**

---

**Assigning extended properties to departments, cost centers, and locations**

You can assign extended properties to departments, cost centers, and locations. Extended properties are meta objects, such as operating codes, cost codes, or cost accounting areas that cannot be mapped directly in One Identity Manager.

**To set extended properties**

1. In the Manager, select the Organizations > <role class> category.
2. Select the role in the result list.
3. Select Assign extended properties.
4. In the Add assignments pane, assign extended properties.
   
   **TIP:** In the Remove assignments pane, you can remove assigned extended properties.
**To remove an assignment**
- Select the extended property and double-click.
5. Save the changes.

**Related topics**
- Setting up extended properties on page 193

**Reports about departments, cost centers, and locations**

One Identity Manager makes various reports available containing information about the selected base object and its relations to other One Identity Manager database objects. The following reports are available for departments, cost centers, and locations.

| NOTE: Other sections may be available depending on the which modules are installed.

**Table 24: Reports about departments, cost centers, and locations**

Employee administration

The main component of One Identity Manager maps employees with their main data and all available company resources. IT resources, such as devices, software, and access permissions in various target systems, qualify as company resources. Resources such as mobile telephones, company cars, or keys can be mapped to employees, as well.

Employees obtain company resources according to their function and their position with the company structure. Company structures, such as departments, cost centers, and location, are also mapped in One Identity Manager. As are employee memberships in these company structures. Once company resources are assigned to the company structures, they are inherited by all the members. This way, employees automatically be supplied with all the necessary company resources.

If you manage access permissions on all One Identity Manager tools using the application role, you obtain all of the information about current access permissions and employee responsibilities with One Identity Manager.

One Identity Manager components for managing employees are available when the QER | Person configuration parameter is set.

- In the Designer, check if the configuration parameter is set. If not, set the configuration parameter.

### Basic data for employee main data

The following basic data is required for managing employees.

- **Configuration parameter**
  Use configuration parameters to configure the behavior of the system’s basic settings. One Identity Manager provides default settings for different configuration parameters. Check the configuration parameters and modify them as necessary to suit your requirements.

  Configuration parameters are defined in the One Identity Manager modules. Each One Identity Manager module can also install configuration parameters. In the Designer, you can find an overview of all configuration parameters in the **Base data > General > Configuration parameters** category.

- **Business Partners**
  When external employees are entered into the system, a company must be named.

- **Mail templates**
  The login data for new user accounts in a target system can be sent to a specified person by email. In this case, two messages are sent with the user name and the initial password. Mail templates are used to generate the messages.

- **Password policy**
An employee's central password is formed from the target system specific user accounts by respective configuration. The **Employee central password policy** defines the settings for the (Person.CentralPassword) central password.

**Detailed information about this topic**

- Creating and editing business partners for external employees on page 86
- Mail templates for notifications about employees on page 87
- Password policies for employees on page 96
- Effective configuration parameters for setting up employees on page 202

**Creating and editing business partners for external employees**

To manage external employees you require information about the business partner. Enter data for the external company.

**To create or edit a business partner**

1. In the Manager, select the Employees > Basic configuration data > Business partners category.
2. In the result list, select a company and run the Change main data task.
   - OR -
   Click in the result list.
3. Edit the business partner's main data.
4. Save the changes.

Enter the following data for a company.

### Mail templates for notifications about employees

One Identity Manager supplies mail templates by default. These mail templates are available in English and German. If you require the mail body in other languages, you can add mail definitions for these languages to the default mail template.
To edit a default mail template

- In the Manager, select the Attestation > Basic configuration data > Mail templates > Predefined category.

Related topics

- Creating and editing mail definitions for employees on page 88
- Base object for mail templates about employees on page 89
- Editing mail templates for employees on page 89

Creating and editing mail definitions for employees

For more detailed information about creating and editing mail template, see the One Identity Manager Operational Guide.

Mail texts can be defined in these different languages in a mail template. This ensures that the language of the recipient is taken into account when the email is generated.

To create a new mail definition

1. In the Manager, select the Employees > Basic configuration data > Mail templates category.
2. Select a mail template in the result list and run the Change main data task.
3. In the result list, select the language for the mail definition in the Language menu.
   All active languages are shown. To use another language, in the Designer, enable the corresponding countries. For more information, see the One Identity Manager Configuration Guide.
4. Enter the subject in Subject.
5. Edit the mail text in the Mail definition view with the help of the Mail Text Editor.
6. Save the changes.

To edit an existing mail definition

1. In the Manager, select the Employees > Basic configuration data > Mail templates category.
2. Select a mail template in the result list and run the Change main data task.
3. In the Mail definition menu, select the language for the mail definition.
   
   **NOTE:** If the Common | MailNotification | DefaultCulture configuration parameter is set, the mail definition is loaded in the default language for email notifications when the template is opened.
4. Edit the mail subject line and the body text.
5. Save the changes.
Related topics

- Base object for mail templates about employees on page 89

Base object for mail templates about employees

Entering a base object in a mail template is only required if properties of the base object are referenced in the mail definition.

In the subject line and body text of a mail definition, you can use all properties of the object entered under **Base object**. You can also use the object properties that are referenced by foreign key relation.

To access properties use dollar notation. For more information, see the *One Identity Manager Configuration Guide*.

Related topics

- Creating and editing mail definitions for employees on page 88

Editing mail templates for employees

For more information about creating and editing mail template, see the *One Identity Manager Operational Guide*.

A mail template consists of general main data such as target format, importance, or mail notification confidentiality, and one or more mail definitions. Mail text is defined in several languages in the mail template. This ensures that the language of the recipient is taken into account when the email is generated.

**To create and edit mail templates**

1. In the Manager, select the **Employees > Basic configuration data > Mail templates** category.

2. Select a mail template in the result list and run the **Change main data** task.
   - OR -
   Click in the result list.
   This opens the mail template editor.

3. Edit the mail template.

4. Save the changes.
To copy a mail template

1. In the Manager, select the Employees > Basic configuration data > Mail templates category.
2. Select the mail template that you want to copy in the result list and run the Change main data task.
3. Select the Copy mail template task.
4. Enter the name of the new mail template in the Name of copy field.
5. Click OK.

To display a mail template preview

1. In the Manager, select the Employees > Basic configuration data > Mail templates category.
2. Select a mail template in the result list and run the Change main data task.
3. Select the Preview task.
4. Select the base object.
5. Click OK.

To delete a mail template

1. In the Manager, select the Employees > Basic configuration data > Mail templates category.
2. Select the template in the result list.
3. Click in the result list.
4. Confirm the security prompt with Yes.

</thead>
<tbody>
<tr>
<td>QER</td>
<td>Person</td>
</tr>
</tbody>
</table>
Configuration parameter | Meaning
--- | ---
account names of all permitted target systems. If the configuration parameter is not set, it is only formed uniquely related to the central user accounts of all employees.

The employee’s central user account is used to form the user account login name in the active system. The central user account is still used for logging into the One Identity Manager tools. In One Identity Manager default installation, the central user account is made up of the first and the last name of the employee. If only one of these is known, then it is used for the central user account. One Identity Manager checks to see if a central user account with that value already exists. If this is the case, an incremental number is added to the end of the value.

Table 29: Example of forming of central user accounts

<table>
<thead>
<tr>
<th>First name</th>
<th>Last name</th>
<th>Central user account</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clara</td>
<td>Harris</td>

</tr>
<tr>
<td>Clara</td>
<td>Harrison</td>
<td>CLARAH1</td>
</tr>
</tbody>
</table>

**Employee's default email address**

The employee’s default email address is displayed on the mailboxes in the activated target system. In the One Identity Manager default installation, the default email address is formed from the employee’s central user account and the default mail domain of the active target system.

The default mail domain is determined using the QER | Person | DefaultMailDomain configuration parameter.

- In the Designer, set the configuration parameter and enter the default mail domain name as a value.

**Related topics**

- Employee's central user account on page 90
Employee's central password

An employee's central password can be used for logging into the target systems and for logging into One Identity Manager. Depending on the configuration, an employee's central password is replicated to their user accounts and their system user password.

- To publish the change in an employee's central user password to all existing user accounts of the employee, check in the Designer if the `QER | Person | UseCentralPassword` configuration parameter is set. If not, set the configuration parameter.

- To copy an employee's central password to their system user password for logging in, in the Designer, check if the `QER | Person | UseCentralPassword | SyncToSystemPassword` configuration parameter is set. If not, set the configuration parameter.

- If an employee’s system user account must be unlocked if the central password is given, in the Designer, check if the `QER | Person | UseCentralPassword | SyncToSystemPassword | UnlockByCentralPassword` configuration parameter is set. If not, set the configuration parameter.

### NOTE:

- The **Employee central password policy** password policy is applied to an employee's central password. Ensure that the password policy does not violate the target system's specific password policies.

- Use the `QER | Person | UseCentralPassword | CheckAllPolicies` configuration parameter to specify whether the employee’s central password is tested against all the target system’s password policies in which the employee has user accounts. This test is only carried out in the Password Reset Portal.

- An employee's central password is published to a user account only if the user account's target system is synchronized by the One Identity Manager.

- If a target system is read-only, an employee’s central password is not propagated to user accounts in that target system.

- An employee's central password is not replicated to privileged user accounts of the employee.

- If a password cannot be changed due to an error, the employee receives a corresponding email notification.

- To replicate an employee's central password to a password column of a customer-specific user account table, in the Designer, define a `ViewAddOn` for the `QER|PersonCentralPwdColumn` view. The database view returns the password column of the user account tables. The user account table must have a reference to the employee (`UID_Person`) and a `XMarkedForDeletion` column. For detailed information about modifying the One Identity Manager schema, see the *One Identity Manager Configuration Guide*.

- If you want to map additional user-specific features, overwrite the `QER_Publish_CentralPassword` script. For detailed information about editing scripts, see the *One
Identity Manager Configuration Guide.

- The central password, the system user password, and the user account passwords can be changed by using the Password Reset Portal. For more information, see the One Identity Manager Web Designer Web Portal User Guide and the One Identity Manager Web Application Configuration Guide.

Mapping multiple employee identities

Table 30: Configuration parameter for representing multiple identities

<table>
<thead>
<tr>
<th>Configuration parameter</th>
<th>Effect when set</th>
</tr>
</thead>
<tbody>
<tr>
<td>Person</td>
<td>MasterIdentity</td>
</tr>
</tbody>
</table>

Under certain circumstances, it may be necessary for employees to have different identities for their work – for example, identities that result from different contracts at different branches. These identities can differ in their affiliation to departments, or cost centers, or in their access permissions for example. External employees at different locations can also be used and represented with different identities in the system. You can define a main identity and a subidentity for an employee in One Identity Manager to represent each of the identities and to group them at a central location.

In target systems, different types of user accounts are available to provide the employees with different permissions. An employee can have different identities to use multiple user accounts with different types. In order to improve the assignment of authorizations to the target systems, the sub-identities of the employees are split into different identity types. This classification corresponds to the user account types.
Main identity

- A main identity represents a real person.
- A main identity can be assigned user accounts and permissions in One Identity Manager and it can place requests in the IT Shop.
- The employee main data of a main identity is shown in One Identity Manager.
- A main identity can have several subidentities.

Subidentity

- A subidentity is a virtual employee.
- A subidentity can be assigned user accounts and permissions in One Identity Manager and it can place requests in the IT Shop.
- A subidentity is always assigned to a main identity.
- Employee main data of a subidentity is displayed in One Identity Manager. This can be copied from the main identity data using the appropriate templates.
- Enter a main identity for the subidentity using **Main identity** on the employee’s main data form.

**TIP:** If an employee works with several identities, but only one of these is currently known in the One Identity Manager, then you should:

- Create a main identity for this employee
- Assign the identity known until now as a subidentity
- Create new subidentities for the additional identities

In this way, it is possible to test the employee’s permitted permissions per subidentity or per main identity including all subidentities in the bounds of an identity audit.

- **Employee identity types** on page 94

### Employee identity types

To differentiate the different identities of an employee, use the following identity types.

**Table 31: Identity types**

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary identity</td>
<td>Employee’s default identity. The employee has a default user account.</td>
</tr>
<tr>
<td>Organizational</td>
<td>Virtual employee (subidentity) for mapping different roles to an</td>
</tr>
<tr>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>identity</td>
<td>employee in the organization. The sub-identity has a user account of the <strong>Organizational identity</strong> type. Also enter a main identity.</td>
</tr>
<tr>
<td>Personalized admin identity</td>
<td>Virtual employee (subidentity) that belongs to a user account of the <strong>Personalized administrator identity</strong> type. Also enter a main identity.</td>
</tr>
<tr>
<td>Sponsored identity</td>
<td>Pseudo employee associated with a user account of the <strong>Sponsored identity</strong> type. Assign a manager to the employee.</td>
</tr>
<tr>
<td>Shared identity</td>
<td>Pseudo employee associated with an administrative user account of the <strong>Shared identity</strong> type. Assign a manager to the employee.</td>
</tr>
<tr>
<td>Service identity</td>
<td>Pseudo employee associated with a user account of the <strong>Service identity</strong> type. Assign a manager to the employee.</td>
</tr>
<tr>
<td>Machine identity</td>
<td>Pseudo employee for mapping machine identities.</td>
</tr>
</tbody>
</table>

The primary identity, the organizational identity, and the personal admin identity are different identities under which the same actual employee can run their different tasks within the company.

Employees with a personal admin identity or an organizational identity are set up as sub-identities. These subidentities are then linked to user accounts, enabling you to assign the required permissions to the different user accounts.

The sponsored identity, the shared identity, and the service identity represent pseudo employees that are used to provide the linked user accounts with permissions in the respective target systems. The classification of pseudo employees to hierarchical roles or as customers in the IT Shop enables the assignment of permissions to the user accounts. Requests in the IT Shop can be triggered only by the manager of these pseudo employees. When evaluating reports, attestations, or compliance checks, check whether pseudo employees need to be considered separately.

Password policies for employees

One Identity Manager provides you with support for creating complex password policies, for example, for system user passwords, the employees' central password as well as passwords for individual target systems. Password policies apply not only when the user enters a password but also when random passwords are generated.

Predefined password policies are supplied with the default installation that you can use or customize if required. You can also define your own password policies.

Detailed information about this topic

- Predefined password policies on page 96
- Applying employee password policies on page 97
- Creating password policies for employees on page 100
- Custom scripts for password requirements on page 104
- Defining the excluded list for passwords on page 107
- Checking employee passwords on page 107
- Generating passwords for testing employees on page 108
- Informing employees about expiring passwords on page 108

Predefined password policies

You can customize predefined password policies to meet your own requirements if necessary.

Password for logging in to One Identity Manager

The One Identity Manager password policy is applied for logging in to One Identity Manager. This password policy defines the settings for the system user passwords (DialogUser.Password and Person.DialogUserPassword) as well as the passcode for a one time log in on the Web Portal (Person.Passcode).

**NOTE:** The One Identity Manager password policy is marked as the default policy. This password policy is applied if no other password policy can be found for employees, user accounts, or system users.

Password policy for forming employees' central passwords

An employee's central password is formed from the target system specific user accounts by respective configuration. The Employee central password policy defines the settings for the (Person.CentralPassword) central password. Members of the Identity Management | Employees | Administrators application role can adjust this password policy.
IMPORTANT: Ensure that the Employee central password policy does not violate the target system-specific requirements for passwords.

Password policies for user accounts

Predefined password policies are provided, which you can apply to the user account password columns of the user accounts. You can define password policies for user accounts for various base objects, for example, for account definitions, manage levels, or target systems.

For detailed information about password policies for user accounts, see the administration guides of the target systems.

Related topics

- Employee's central password on page 92

Applying employee password policies

The One Identity Manager password policy and Employee central password policy are predefined password policies for employees' central passwords.

You can assign custom password policies to employees' password columns. You can also assign the password policies to departments, cost centers, locations, or business roles, and therefore apply password policies depending on the employees' organizational classification.

Which password policy is applied to a person is determined in the following order:

1. Password policy of the employee's primary business role
2. Password policy of the employee's primary department
3. Password policy of the employee's primary location
4. Password policy of the employee's primary cost center
5. General password policy for employee passwords
6. The One Identity Manager password policy (default policy)

Related topics

- Predefined password policies on page 96
- Changing the password policy for password columns on page 98
- Assigning password policies to departments, cost centers, locations, and business roles on page 98
Changing the password policy for password columns

If you do not want to apply the predefined password policy to the password column of employees, change the password policy assignment to the base object in the Manager.

To change a password policy's assignment

1. In the Manager, select the Employees > Basic configuration data > Password policies category.
2. Select the password policy in the result list.
3. Select the Assign objects task.
4. In the Assignments pane, select the assignment you want to change.
5. From the Password Policies menu, select the new password policy you want to apply.
6. Save the changes.

Assigning password policies to departments, cost centers, locations, and business roles

You can assign the password policies for forming an employee's system user password, the passcode, and an employee's central password to departments, cost centers, locations, and business roles.

NOTE: If you want to use the assignment of a password policy through company structures, you need to decide whether to use either departments, cost centers, locations, or business roles. Otherwise, performance problems may occur when determining the valid password policy. A large number of hierarchy levels could also lead to performance problems when determining the password policy to apply.

To reassign a password policy

1. In the Manager, select the Employees > Basic configuration data > Password policies category.
2. Select the password policy in the result list.
3. Select the Assign objects task.
4. Click Add in Assignments and enter the following data.
• **Apply to**: Application scope of the password policy.

**To specify an application scope**

1. Click ➔ next to the field.
2. Under **Table**, select the table that contains the basic objects. You have the following options:
   - Departments (Department table)
   - Business roles (Org table)
     
     **NOTE**: This table is only available if the Business Roles Module is installed.
   - Locations (Locality table)
   - Cost centers (Profitcenter table)
3. Under **Apply to**, select the specific department, cost center, location, or business role.
4. Click **OK**.

• **Password column**: Name of the password column. You have the following options:
  - Employees - central password (Person table, CentralPassword column)
  - Employees - password (Person table, DialogUserPassword column)
  - Employees - passcode (Person table, Passcode column)

5. Save the changes.

### Editing password policies for employees

Predefined password policies are supplied with the default installation that you can use or customize if required.

**To edit a password policy**

1. In the Manager, select the **Employees > Basic configuration data > Password policies** category.
2. In the result list, select the password policy.
3. Select the **Change main data** task.
4. Edit the password policy's main data.
5. Save the changes.
Creating password policies for employees

Predefined password policies are supplied with the default installation that you can use or customize if required. You can also define your own password policies.

To create a password policy

1. In the Manager, select the Employees > Basic configuration data > Password policies category.
2. On the main data form, enter the main data of the password policy.
3. Save the changes.

General main data for password policies

Enter the following main data of a password policy.

Table 32: main data for a password policy

<table>
<thead>
<tr>

<tr>
<td>Password confirmation</td>
<td>Reconfirm password.</td>
</tr>
<tr>
<td>Minimum Length</td>
<td>Minimum length of the password. Specify the number of characters a password must have. If the value is 0, no password is required.</td>
</tr>
<tr>
<td>Max. length</td>
<td>Maximum length of the password. Specify the number of characters a password can have. The maximum permitted value is <strong>256</strong>.</td>
</tr>
<tr>
<td>Max. errors</td>
<td>Maximum number of errors. Set the number of invalid passwords attempts. The number of failed logins is only taken into account when logging in to One Identity Manager. If the value is 0, the number of failed logins is not taken into account.</td>
</tr>
</tbody>
</table>

- **Note:** The One Identity Manager password policy is marked as the default policy. This password policy is applied if no other password policy can be found for employees, user accounts, or system users.

You can use the Password Reset Portal to reset the passwords of employees and system users who have been blocked. For more information, see the *One Identity Manager Web*
<table>
<thead>
<tr>
<th>Property</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Validity period</strong></td>
<td>Maximum age of the password. Enter the length of time a password can be used before it expires. If the value is 0, then the password does not expire.</td>
</tr>
<tr>
<td><strong>Password history</strong></td>
<td>Enter the number of passwords to be saved. If, for example, a value of 5 is entered, the user's last five passwords are stored. If the value is 0, then no passwords are stored in the password history.</td>
</tr>
<tr>
<td><strong>Minimum password strength</strong></td>
<td>Specifies how secure the password must be. The higher the password strength, the more secure it is. The value 0 means that the password strength is not tested. The values 1, 2, 3 and 4 specify the required complexity of the password. The value 1 represents the lowest requirements in terms of password strength. The value 4 requires the highest level of complexity.</td>
</tr>
<tr>
<td><strong>Name properties denied</strong></td>
<td>Specifies whether name properties are permitted in the password. If this option is set, name properties are not permitted in passwords. The values of these columns are taken into account if the Contains name properties for password check option is set. In the Designer, adjust this option in the column definition. For more information, see the One Identity Manager Configuration Guide.</td>
</tr>
</tbody>
</table>

### Character classes for passwords

Use the **Character classes** tab to specify which characters are permitted for a password.

**Table 34: Character classes for passwords**

<table>
<thead>
<tr>
<th>Property</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Required number of character classes</strong></td>
<td>Number of rules for character classes that must be fulfilled so that a password adheres to the password policy. The following rules are taken into account for Min. number letters, Min. number lowercase, Min. number uppercase, Min. number digits, and Min. number special characters.</td>
</tr>
</tbody>
</table>

That means:

- Value 0: All character class rules must be fulfilled.
- Value >0: Minimum number of character class rules that must be fulfilled. At most, the value can be the number of rules with a value >0.

**Custom scripts for password requirements**

You can implement custom scripts for testing and generating passwords if the password requirements cannot be mapped with the existing settings options. Scripts are applied in addition to the other settings.

**Detailed information about this topic**

- Checking passwords with a script on page 104
- Generating passwords with a script on page 106

**Checking passwords with a script**

You can implement a script if additional policies need to be used for checking a password that cannot be mapped with the available settings.

**Syntax of check scripts**

```vbnet
Public Sub CCC_CustomPwdValidate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)

With parameters:
    policy = password policy object
    spwd = password to check

| TIP: To use a base object, take the Entity property of the PasswordPolicy class. |
```
Example: Script that checks a password

A password cannot start with ? or !. The password cannot start with three identical characters. The script checks a given password for validity.

```vbnet
Public Sub CCC_PwdValidate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)
    Dim pwd = spwd.ToInsecureArray()
    If pwd.Length>0
        If pwd(0)="?" Or pwd(0)="!
            Throw New Exception(#LD("Password can't start with '?' or '!'")#)
        End If
    End If
    If pwd.Length>2
        If pwd(0) = pwd(1) AndAlso pwd(1) = pwd(2)
            Throw New Exception(#LD("Invalid character sequence in password")#)
        End If
    End If
End Sub
```

To use a custom script for checking a password

1. In the Designer, create your script in the **Script Library** category.
2. Edit the password policy.
   
   a. In the Manager, select the **Employees > Basic configuration data > Password policies** category.
   
   b. In the result list, select the password policy.
   
   c. Select the **Change main data** task.
   
   d. On the **Scripts** tab, enter the name of the script to be used to check a password in the **Check script** field.
   
   e. Save the changes.

Related topics

- Generating passwords with a script on page 106
Generating passwords with a script

You can implement a generating script if additional policies need to be used for generating a random password, which cannot be mapped with the available settings.

Syntax for generating script

Public Sub CCC_PwdGenerate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)

With parameters:
  policy = password policy object
  spwd = generated password

| TIP: To use a base object, take the Entity property of the PasswordPolicy class.

Example: Script that generates a password

The script replaces invalid ? and ! characters at the beginning of random passwords with _.

Public Sub CCC_PwdGenerate( policy As VI.DB.Passwords.PasswordPolicy, spwd As System.Security.SecureString)
    Dim pwd = spwd.ToInsecureArray()
    ' replace invalid characters at first position
    If pwd.Length>0
        If pwd(0)="?" Or pwd(0)="!
            spwd.SetAt(0, CChar("_"))
        End If
    End If
End Sub

To use a custom script for generating a password

1. In the Designer, create your script in the Script Library category.
2. Edit the password policy.
   a. In the Manager, select the Employees > Basic configuration data > Password policies category.
   b. In the result list, select the password policy.
   c. Select the Change main data task.
d. On the **Scripts** tab, enter the name of the script to be used to generate a password in the **Generating script** field.

e. Save the changes.

**Related topics**

- [Checking passwords with a script](#) on page 104

**Defining the excluded list for passwords**

You can add words to a list of restricted terms to prohibit them from being used in passwords.

| NOTE: The restricted list applies globally to all password policies.

**To add a term to the restricted list**

1. In the Designer, select the **Base data > Security settings > Password policies** category.
2. Create a new entry with the **Object > New** menu item and enter the term you want to exclude from the list.
3. Save the changes.

**Checking employee passwords**

When you verify a password, all the password policy settings, custom scripts, and the restricted passwords are taken into account.

**To verify if a password conforms to the password policy**

1. In the Manager, select the **Employees > Basic configuration data > Password policies** category.
2. In the result list, select the password policy.
3. Select the **Change main data** task.
4. Select the **Test** tab.
5. Select the table and object to be tested in **Base object for test**.
6. Enter a password in **Enter password to test**.
   - A display next to the password shows whether it is valid or not.
Generating passwords for testing employees

When you generate a password, all the password policy settings, custom scripts and the restricted passwords are taken into account.

To generate a password that conforms to the password policy

1. In the Manager, select the Employees > Basic configuration data > Password policies category.
2. In the result list, select the password policy.
3. Select the Change main data task.
4. Select the Test tab.
5. Click Generate.
This generates and displays a password.

Informing employees about expiring passwords

There are different ways to inform employees that their password is going to expire:

- Users are alerted about their password expiring when they log in to One Identity Manager and can change their password if necessary.
- For employee-based authentication modules, the system sends reminder notifications in relation to expiring passwords as of seven days in advance of the password expiry date.
  - You can adjust the time in days in the Common | Authentication | DialogUserPasswordReminder configuration parameter. Edit the configuration parameter in the Designer.
  - The notifications are triggered in accordance with the Reminder system user password expires schedule and use the Employee - system user password expires mail template. You can adjust the schedule and mail template in the Designer if required.

For detailed information about the One Identity Manager authentication modules and about editing system users, see the One Identity Manager Authorization and Authentication Guide.
Displaying locked employees and system users

If a user has exceeded the maximum number of failed logins, the employee or system user will not be able to log in to One Identity Manager.

- Locked employees are displayed in the Manager in the Employees > Locked employees category. An additional message referring to the locked login is also displayed on the overview form for an employee.
- Locked system users are displayed in the Designer in the Permissions > System users > Locked system users category. An additional message referring to the locked login is also displayed on the overview form for a system user.

You can reset the passwords of employees and system users who have been blocked in Password Reset Portal. This unlocks the employees and system users again. For more information, see the One Identity Manager Web Designer Web Portal User Guide and the One Identity Manager Web Application Configuration Guide.

Creating and editing employees

In One Identity Manager, you can manage main data of company employees as well as external employees. Because the described main data is the same for internal and external employees, the Employee term is used in the following description.

In the Manager, enter employee main data in the Employees category. Employees are filters by different criteria in this category.

- Employees: All activated and temporarily deactivated employees.
- Inactive employees: All permanently deactivated employees.
- Locked employees: All employees who are locked due to incorrect password input.
- Certification: All employees by certification status.
- Data source: All employees by import data source.
- Identity: All employees according to their identity type.

To create or edit employees

1. In the Manager, select the Employees > Employees category.
2. Select an employee in the result list and run the Change main data task.
   - OR -
Click in the result list.
This opens the main data form for an employee.

3. Edit the employee’s main data.
4. Save the changes.

Ensure you fill out all compulsory fields when you edit the main data. Certain main data is inherited by the employee user account through templates.

**NOTE:** Employee properties loaded from a target system can only be edited to a limited degree in One Identity Manager. Certain properties are locked because this target system is the primary system. The source from which the employee main data is imported determines which properties are locked.

- Employee's default email address on page 91
- Mapping multiple employee identities on page 93
- Employee identity types on page 94

### Disabling and deleting employees

How employees are handled, particularly in the case of permanent or partial withdrawal of an employee, varies between individual companies. There are companies that never delete employees, and only disable them when they leave the company.

### Detailed information about this topic

- Temporarily deactivating employees on page 119
- Permanently deactivating employees on page 120
- Reactivate permanently deactivated employees on page 121
- Deferred deletion of employees on page 122

### Temporarily deactivating employees

NOTE: Employees who are temporarily deactivated can no longer log in to One Identity Manager.
The employee has temporarily left the company and is expected to return at a predefined date. The desired course of action could be to disable the user account and remove all group memberships. Or the user accounts could be deleted and reestablished with the employee's return, even if it is with a new system identification number (SID).

Temporary disabling of an employee is triggered by:

- The **Temporary disabled** option
- The start and end date for deactivation (**Temporary disabled from** and **Temporary disabled until**)

**NOTE:**

- Configure the **Lock accounts of employees that have left the company** schedule in the Designer. This schedule checks the start date for disabling and sets the **Temporarily disabled** option when it is reached.
- In the Designer, configure the **Enable temporarily disabled accounts** schedule. This schedule monitors the end date of the disabled period and enables the employee with their user accounts when the date expires. Employee’s user accounts that were disabled before the period of temporary absence are also re-enabled once the period has expired.

**Related topics**

- [Permanently deactivating employees](#) on page 120
- [Deferred deletion of employees](#) on page 122

### Permanently deactivating employees

**NOTE:** Employees who are permanently deactivated can no longer log in to One Identity Manager.

Employees can be deactivated permanently when, for example, they leave the company. It might be necessary, to remove access to this employee’s entitlements in connected target systems and their company resources.

Effects of permanent deactivating an identity are:

- The employee cannot be assigned to employees as a manager.
- The employee cannot be assigned to roles as a supervisor.
- The employee cannot be assigned to attestation policies as an owner.
- There is no inheritance of company resources through roles, if the additional **No inheritance** option is set for an employee.
- Employee user accounts are locked or deleted and then removed from group memberships.
Trigger permanent deactivation through:

- The **Deactivate employee permanently** task
  This task ensures that the **Permanently deactivates** option is enabled and the leaving date and last working day are set to the current date.
- The leaving date is reached

**NOTE:**
- In the Designer, check the **Lock accounts of employees that have left the company** schedule. This schedule regularly checks the leaving date and sets the **Permanently deactivated** option on reaching the date.
- The **Re-enable employee** task ensures that the employee is re-enabled.

- The **Denied** certification status
  If an employee's certification status is set to **Denied** manually or as a result of attestation, the employee is immediately permanently deactivated. When the employee's certification status is changed to **Certified**, the employee is activated again.

  **NOTE:** This function is only available if the Attestation Module is installed.

**Related topics**

- Temporarily deactivating employees on page 119
- Deferred deletion of employees on page 122
- Reactivate permanently deactivated employees on page 121
- Changing the certification status of employees on page 123

**Reactivate permanently deactivated employees**

Employees who are permanently deactivated can be re-enabled if they were not disabled by certification.

**To reactivate an employee**

1. In the Manager, select the **Employees > Inactive employees** category.
2. Select the employee in the result list.
3. Select the **Reactivate employee** task.
4. Confirm the security prompt with **Yes** if the employee should be enabled.
   On the main data form for the employee, the **Permanently deactivated** option is not set. The end date and last working day are deleted assuming the dates are past.
5. Save the changes.
Deferred deletion of employees

When an employee is deleted, they are tested to see if user accounts and company resources are still assigned, or if there are still pending requests in the IT Shop. The employee is marked for deletion and therefore locked out of further processing. Before an employee can finally be deleted from the One Identity Manager database, you need to delete all company resource assignments and close all requests. You can do this manually or implement custom processes to do it. All the user accounts linked to one employee could be deleted by default by One Identity Manager once this employee has been deleted. If no more company resources are assigned, the employee is finally deleted.

By default, employees are finally deleted from the database after 30 days. During this period it is possible to re-enable the employee. A restore is not possible once deferred deletion has expired.

In the Designer, you can set an alternative delay on the Person table. For more information on configuring the deferred deletion, refer to the One Identity Manager Configuration Guide.

Deleting all employee related data

A procedure called QER_PPersonDelete_GDPR is provided to support the special process for deleting employee related data, which implements the General Data Protection Regulation (GDPR) of the European Union. You can use this procedure to delete all data relating to an employee from the One Identity Manager database. For certain dependencies, processes that are handled by the One Identity Manager Service are created by the procedure.

| NOTE: | While this procedure is running, the database does not allow any triggers. Therefore, it is recommended to only run the procedure in maintenance periods. |

You can run the procedure in any program suitable for running SQL queries.

Calling syntax:

```sql
exec QER_PPersonDelete_GDPR ' <employee UID from the Person table, UID_Person column>'
```

| NOTE: | Personal data may be subject to further regulations such as legal retention periods. Personal data from the One Identity Manager History Database is not automatically deleted by default because of this. It is recommended to operate One Identity|
Manager History Databases that correspond to the report periods. After a specified reporting period has expired, you can set up a new One Identity Manager History Database. You set up custom processes for deleting personal data.

Limited access to One Identity Manager

| NOTE: This function is only available if the Attestation Module is installed. Users who only have temporary or limited access to the One Identity Manager can log in through the Web Portal. This functionality can be used, for example, if external employees, such as contract workers, should be provided with temporary access to the One Identity Manager. These employee can log in to the Web Portal as new workers. New employee objects are added for them in the One Identity Manager database.

If you make use of this functionality, take note of the following:

- In One Identity Manager, an employee with the following properties is created:
  - **Certification status**: New
  - **Permanently deactivated**: Set
  - **No inheritance**: Set

- If the **QER | Attestation | UserApproval** configuration parameter is set, the new employee is attested automatically.

- To assign company resources to the employee or to ensure permissions in One Identity Manager, implement custom processes.

For more information about attestation, see the *One Identity Manager Attestation Administration Guide*.

Related topics

- Changing the certification status of employees on page 123

Changing the certification status of employees

| NOTE: This function is only available if the Attestation Module is installed. Employee's certification status is set by default through certification and recertification procedures. For detailed information, see the *One Identity Manager Attestation Administration Guide*.

You can manually change an employee’s certification status if it is necessary to do so outside the regular recertification schedule.
Prerequisite

- The QER | Attestation | UserApproval configuration parameter is set.

**To change an employee's certification status manually**

1. To change the certification status of an active employee, in the Manager, select the Employees > Employees. category.
   - OR -
   To change the certification status of a permanently deactivated employee, in the Manager, select the Employees > Inactive employees category.
2. Select the employee in the result list.
3. Select the Change certification status task.
4. Select the certification status you want from the Certification status menu.
5. Click OK to accept the changes.
   The new certification status for the employee is displayed on the form.

**NOTE:** The Permanently deactivated option is updated depending on the certification status. If an employee’s certification status is set to Denied manually or as a result of attestation, the employee is immediately deactivated permanently. If the employee’s certification status is changed to Certified, the employee is activated again.

**Assigning company resources to employees**

One Identity Manager uses different assignment types to assign company resources.

- Indirect assignment
  In the case of indirect assignment of company resources, employees, devices, and workdesks are arranged in departments, cost centers, locations, business roles, or application roles. The total of assigned company resources for an employee, device, or workdesk is calculated from the position within the hierarchies, the direction of inheritance (top-down or bottom-up) and the company resources assigned to these roles. In the Indirect assignment methods a difference between primary and secondary assignment is taken into account.

- Direct assignment
Direct assignment of company resources results from the assignment of a company resource to an employee, device, or workdesk, for example. Direct assignment of company resources makes it easier to react to special requirements.

- Assignment by dynamic roles

Assignment through dynamic roles is a special case of indirect assignment. Dynamic roles are used to specify role memberships dynamically. Employees, devices, and workdesks are not permanently assigned to a role, just when they fulfill certain conditions. A check is performed regularly to assess which employees, devices, or workdesks fulfill these conditions. The means the role memberships change dynamically. For example, company resources can be assigned dynamically to all employees in a department in this way; if an employee leaves the department they immediately lose the resources assigned to them.

- Assigning through IT Shop requests

Assignment through the IT Shop is a special case of indirect assignment. Add employees to a shop as customers so that company resources can be assigned through IT Shop requests. All company resources assigned as product to this shop can be requested by the customers. Requested company resources are assigned to the employees after approval is granted. Role memberships can be requested through the IT Shop as well as company resources.

The following table shows the possible company resources assignments to employees.

NOTE: Company resources are defined in the One Identity Manager modules and are not available until the modules are installed.

### Assigning employees to departments, cost centers, and locations

Assign the employee to departments, cost centers, and locations so employees obtain their company resources through these organizations. To assign company resources to departments, cost centers, and locations, use the appropriate organization tasks.
To assign an employee to departments, cost centers, and locations (secondary assignment; default method)

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign organizations task.
4. In the Add assignments pane, assign the organizations:
   - On the Departments tab, assign departments.
   - On the Locations tab, assign locations.
   - On the Cost centers tab, assign cost centers.

   **TIP:** In the Remove assignments pane, you can remove assigned organizations.

   **To remove an assignment**
   - Select the organization and double-click 🗑️.
5. Save the changes.

To assign an employee to departments, cost centers, and locations (primary assignment)

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Change main data task.
4. Adjust the following main data on the Organizational tab.
   - Primary department
   - Primary cost center
   - Primary location
5. Save the changes.

Related topics

- Assigning employees, devices, and workdesks to departments, cost centers, and locations on page 72
Assigning employees to business roles

| NOTE: This function is only available if the Business Roles Module is installed.

Assign employees to business roles so that employees obtain their company resources through these business roles. To assign company resources to business roles use the corresponding business role tasks. For more information about working with business roles, see the One Identity Manager Business Roles Administration Guide.

To assign an employee to business roles (secondary assignment; default method)

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign business roles task.
4. In the Add assignments pane, select the role class and assign business roles.

   TIP: In the Remove assignments pane, you can remove assigned business roles.

   To remove an assignment
   - Select the business role and double-click ☑.
5. Save the changes.

To assign an employee to business roles (primary assignment)

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Change main data task.
4. On the Organizational tab, enter the primary business role.
5. Save the changes.

Related topics
- Assigning company resources to employees on page 124

Adding employees to IT Shop custom nodes

When employees are added to a custom node they are entitled to make IT Shop requests. Access permissions to the IT Shop and the assignments allocated to them through product requests in the IT Shop are displayed on the employee’s overview. For detailed information, see the One Identity Manager IT Shop Administration Guide.
To add an employee to the IT Shop

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign IT Shop memberships task.
4. In the Add assignments pane, assign custom nodes.
   - OR -
   In the Remove assignments pane, remove the custom nodes.
5. Save the changes.

Assigning application roles to employees

For detailed information about implementing and editing application roles, see the One Identity Manager Authorization and Authentication Guide.

Assigned employees obtain all the permissions of the permission group to which the application role (or a parent application role) is assigned. In addition, employees obtain the company resources assigned to the application role.

If there are no employees directly assigned to an application role, the employees of the parent application role inherit the permissions.

**NOTE:** The application roles for Base roles | Everyone (Change), Base roles | Everyone (Lookup), Base roles | Employee Managers, and Base roles | Birthright Assignments are automatically assigned to employees. Do not make any manually assignments to these application roles.

To assign application to an employee

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign One Identity Manager application roles task.
4. In the Add assignments pane, assign the application roles.

   **TIP:** In the Remove assignments pane, you can remove application role assignments.

   **To remove an assignment**
   - Select the application role and double-click ✖.

5. Save the changes.
Assigning resources directly to employees

Resources can be assigned directly or indirectly to employees. Indirect assignment is carried out by allocating employees and resources in company structures, like departments, cost centers, locations, or business roles.

To react quickly to special requests, you can assign resources directly to an employee.

**To assign resources directly to an employee**

1. In the Manager, select the Employees > Employees category.
2. Select the employee to whom the resources will be assigned, from the result list.
3. Select the Assign resources task.
4. In the Add assignments pane, assign resources.
   
   **TIP:** In Remove assignments, you can remove assigned resources.

   **To remove an assignment**
   
   - Select the resource and double-click ✅.

5. Save the changes.

**Related topics**

- Assigning resources directly to employees on page 184
- Managing resources on page 178

Assigning software directly to employees

| NOTE: This function is only available if the Software Management Module is installed.

You can assign software directly or indirectly to employees. Indirect assignment is carried out by allocating employees and software in company structures, like departments, cost centers, locations, or business roles. For detailed information about working with software, see the One Identity Manager Software Management Administration Guide.

To react quickly to special requests, you can assign software directly to an employee.

**To assign software directly to an employee**

1. In the Manager, select the Employees > Employees category.
2. Select the employee to whom the software will be assigned, from the result list.
3. Select the Assign software task.
4. In the Add assignments pane, assign software.
   
   **TIP:** In the Remove assignments pane, you can remove assigned software.
To remove an assignment
- Select the software and double-click.

5. Save the changes.

Assigning system roles directly to employees

| NOTE: This function is only available if the System Roles Module is installed. |

System roles can be assigned directly or indirectly to employees. Indirect assignment is carried out by allocating the employees and system roles in company structures, such as departments, cost centers, locations, or business roles. For detailed information about working with system roles, see the One Identity Manager System Roles Administration Guide.

To react quickly to special requests, you can assign system roles directly to an employee.

To assign system roles directly to an employee
1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign system roles task.
4. In the Add assignments pane, assign system roles.
   - **TIP:** In the Remove assignments pane, you can remove assigned system roles.

To remove an assignment
- Select the system role and double-click.

5. Save the changes.

Assigning subscribable reports directly to employees

| NOTE: This function is only available if the Report Subscription Module is installed. |

You can assign subscribable reports directly or indirectly to employees. Indirect assignment is carried out by assigning the employee and subscribable report to company structures, like departments, cost centers, locations, or business roles. For more information about report subscriptions, see the One Identity Manager Report Subscriptions Administration Guide.

In order to react quickly to special requests, you can also assign subscribable reports directly to employees.
To assign user accounts to an employee

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign subscribable reports task.
4. In the Add assignments pane, assign reports.
   
   **TIP:** In the Remove assignments pane, you can remove report assignments.

   **To remove an assignment**
   
   - Select the report and double-click.

5. Save the changes.

Displaying the origin of employees' roles and entitlements

The **Show entitlements origin** report allows you to determine which entitlements a employee owns and where they come from. You can establish whether the employee obtained an entitlements directly or indirectly. For example, in the case of an indirect assignment, you can determine whether the entitlement resulted from a department memberships or a request.

You can also use the report to discover which departments, cost centers, locations, and business roles are assigned to an employee and how the membership evolved.

**To use the origin report**

- In the Designer, set the SysConfig | Display | SourceDetective configuration parameter and compile the database.

   **NOTE:** If you disable the configuration parameter at a later date, model components and scripts that are not longer required, are disabled. SQL procedures and triggers are still carried out. For more information about the behavior of preprocessor relevant configuration parameters and conditional compiling, see the One Identity Manager Configuration Guide.

**To display the origin of an employee's entitlements**

1. In the Manager, select the Employees > Employees category.
2. Select an employee in the result list and run the Show entitlements origin report.
3. Under Assigned objects, you will see the employee’s entitlements, departments, cost centers, locations, and business roles. Select an entry by double-clicking on it to view more details.
4. The Origin area displays the details for the selected entry in a hierarchical structure. You can see whether the assignment was a direct assignment, dynamic assignment, or a request.
You can use the **Details** button to switch to the dynamic role or to the request.

- Double-click on some of the entries in the detail view to go to the object.
- Choose the **Inspect** button for further information about the assignment of authorizations.

**Example: Report on an entitlement’s origin**

The **Show entitlements origin** report establishes that Sam Harris is assigned to the Active Directory "Finance" group.

The report answers several questions.

**Question** Why does Sam Harris have the Active Directory group?

**Answer** Sam Harris owns an Active Directory user account and this user account is assigned to the "Finance" group.

**Question** Why is the user account assigned to the "Finance" group?

**Answer** Sam Harris is assigned to the "Finance" department.

The "Finance" department inherits from the "Global Finance" department. The "Global Finance" department is directly assigned to the "Finance" group.
Why is Sam Harris in the "Finance" department?

There is a department membership request for Sam Harris.

Analyzing role memberships and employee assignments

The **Overview of all assignments** report is displayed for some objects, such as authorizations, compliance rules, or roles. The report finds all the roles, for example, departments, cost centers, locations, business roles, and IT Shop structures in which there are employees who own the selected base object. In this case, direct as well as indirect base object assignments are included.

**Examples:**

- If the report is created for a resource, all roles are determined in which there are employees with this resource.
- If the report is created for a group or another system entitlement, all roles are determined in which there are employees with this group or system entitlement.
- If the report is created for a compliance rule, all roles are determined in which there are employees who violate this compliance rule.
- If the report is created for a department, all roles are determined in which employees of the selected department are also members.
- If the report is created for a business role, all roles are determined in which employees of the selected business role are also members.
To display detailed information about assignments

- To display the report, select the base object from the navigation or the result list and select the **Overview of all assignments** report.
- Click the **Used by** button in the report toolbar to select the role class for which you want to determine whether roles exist that contain employees with the selected base object.

All the roles of the selected role class are shown. The color coding of elements identifies the role in which there are employees with the selected base object. The meaning of the report control elements is explained in a separate legend. To access the legend, click the **i** icon in the report’s toolbar.

- Double-click a control to show all child roles belonging to the selected role.
- By clicking the **v** button in a role's control, you display all employees in the role with the base object.
- Use the small arrow next to **v** to start a wizard that allows you to bookmark this list of employees for tracking. This creates a new business role to which the employees are assigned.

### Displaying the employees overview

Use this task to obtain an overview of the most important information about an employee.

**To obtain an overview of an employee**

1. In the Manager, select the **Employees > Employees** category.
2. Select the employee in the result list.
3. Select the **Employee overview** task.

   The most important information about an employee is shown on this form, including the employee's contact data, user accounts, and affiliation to company structures.
The assigned company resources and access to IT Shop structures and IT Shop requests are displayed.

The employee's responsibilities within the One Identity Manager are displayed on the form. This includes the application roles that an employee has been assigned within the One Identity Manager and the functions as department manager, cost center manager, or approver within the IT Shop.

4. Select the Employee entitlements overview task.
   This form shows the system entitlements and all the target system groups allocated to an employee.

Displaying and deleting employees' Webauthn security keys

One Identity offers users the option to log in, simply and securely, to One Identity Manager web applications with help of (physical) security keys. These security keys support the W3C standard WebAuthn.

For more information about using security keys in the Web Portal, see the One Identity Manager Web Designer Web Portal User Guide. For more about configuring this method, see the One Identity Manager Web Application Configuration Guide.

As personnel administrator, you can view employees' security keys and delete them if necessary.

To display an employee's security key

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Show webauthn security keys task.
   This shows all the employee's security keys.
4. Select one of the security keys in the list to show its details.

To delete an employee's security key

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Show webauthn security keys task.
4. Select the security in the list and click Remove.
5. Save the changes.
Determining the language for employees

In order for email notifications within the request process in the IT Shop or during attestation to be sent in the recipients language, the employee's language has to be determined.

- States and countries and their languages already exist in the One Identity Manager default installation. Verify and edit this information in the Designer. For more information, see the One Identity Manager Configuration Guide.
- Add the country and state of the primary location to the primary department, the primary cost center, the primary business role, or directly to the employee. To map special cases, you can also add the language directly to the location, department, cost center, or employee.

An employee's language is determined in the following order:

1. Language that is directly assigned to the employee.
2. Language of the employee's state.
3. Language of the employee's country.
4. Language directly assigned to the employee's location.
5. Language of the primary location's state.
6. Language of the primary location's country.
7. Language directly assigned to the employee's primary department.
8. Language of the primary department's state.
9. Language of the primary department's country.
10. Language directly assigned to the employee's primary cost center.
11. Language of the primary cost center's state.
12. Language of the primary cost center's country.
13. Language directly assigned to an employee's primary business role
14. Language of the primary business role's state.
15. Language of the primary business role's country.
16. Fallback, in case the language could not be determined with this sequence:
   a. Language from the Common | MailNotification | DefaultCulture configuration parameter.
   b. Language en-US.
Determining employees working hours

An employee’s working hours need to be made public in order to determine the reaction times of approvers or attestors to request processes in the IT Shop or during attestation.

- States and countries and their time zones, public holidays, and standard working hours already exist in One Identity Manager. Verify and edit this information in the Designer. For more information, see the One Identity Manager Configuration Guide.
- The employee’s location (state or country) must be determined so that the working hours can be calculated correctly. Add the country and state to the primary location, the primary department, the primary cost center, the primary business role, or directly to the employee.
- The correct working hours are subsequently calculated. The standard working hours in the country, rule for weekends and holidays, as well as different time zones and daylight-saving rules, are taken into account when the hours are calculated.

The employee’s location and therefore valid working hours, are determined in the following order:

1. State that is directly assigned to the employee.
2. Country that is directly assigned to the employee.
5. State of primary department.
6. Country of primary department.
7. State of primary cost center.
11. Fallback, in case the location could not be determined with this sequence:
   a. State or country using the secondary location, department, or cost center.
   b. First country from all enabled countries in the database sorted by telephone number
   c. Country entered as default in the database (DialogDatabase table, UID_DialogCountryDefault column).
      For more information, see the One Identity Manager Configuration Guide.
   d. Country USA.
Manually assigning user accounts to employees

The overview form displays all the employee’s user accounts. You should use account definitions as the default method for creating user accounts. For detailed information about account definitions, see the One Identity Manager Target System Base Module Administration Guide.

To react quickly to special requests, you can use the relevant tasks for assigning user accounts to manually assign a user account for an employee.

| NOTE: | The tasks for manually assigning user accounts to persons are defined in the One Identity Manager modules and are only available when the modules have been installed. For more information, see the target system guides.

Related topics

Entering calls for employees

| NOTE: | This function is only available if the Helpdesk Module is installed.

Enter the calls for employees through the Helpdesk Module. For more information about the help desk, see One Identity Manager Help Desk Module User Guide.

To enter help desk data for an employee
1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Show calls task to display calls entered for an employee task.
4. Select the New call task to enter a new call.
5. Save the changes.

Assigning extended properties to employees

Extended properties are meta objects, such as operating codes, cost codes, or cost accounting areas that cannot be mapped directly in One Identity Manager.
To specify extended properties for a group

1. In the Manager, select the Employees > Employees category.
2. Select the employee in the result list.
3. Select the Assign extended properties task.
4. In the Add assignments pane, assign extended properties.
   
   **TIP:** In the Remove assignments pane, you can remove assigned extended properties.

   **To remove an assignment**
   
   - Select the extended property and double-click ✓.

5. Save the changes.

Managing devices and workdesks

One Identity Manager offers extended device administration functionality for networks. One Identity Manager differentiates between device types, device models, and the device itself.

- Device types, such as PCs, printers, or monitors, provide the initial classification of the devices.
- Device models provide additional fine-tuning of the device types in order to obtain a more exact classification of devices.
- The actual devices as they are defined in the network are listed under devices.

Workdesks are required for assigning different devices to a workstation. The assignment of company resources can be mainly automated by assigning workdesks to business roles, departments, cost centers, locations, or dynamic roles.

To manage devices and workdesks in One Identity Manager

- In the Designer, set the **Hardware** configuration parameter and compile the database.
  
  **NOTE:** If you disable the configuration parameter at a later date, model components and scripts that are not longer required, are disabled. SQL procedures and triggers are still carried out. For more information about the behavior of preprocessor relevant configuration parameters and conditional compiling, see the One Identity Manager Configuration Guide.

Detailed information about this topic

- Basic data for device admin on page 146
- Creating and editing devices on page 152
- Assigning company resources to devices on page 158
- Creating and editing workdesks on page 162
- Assigning company resources to workdesks on page 165
- Asset data for devices on page 172
Basic data for device admin

The following basic data is required for managing devices:

- Configuration parameter
  Use configuration parameters to configure the behavior of the system's basic settings. One Identity Manager provides default settings for different configuration parameters. Check the configuration parameters and modify them as necessary to suit your requirements.

  Configuration parameters are defined in the One Identity Manager modules. Each One Identity Manager module can also install configuration parameters. In the Designer, you can find an overview of all configuration parameters in the Base data > General > Configuration parameters category.

- Device models
  Device models are required to classify devices, for example, PC, server, monitor, printer types. One Identity Manager contains predefined device models.

- Information about manufacturers and suppliers
  You can store manufacturers and suppliers to help with entering device models and devices.

- Device status
  Enter the possible device status for asset data about devices.

- Workdesk status
  You can add a status to workdesks.

- Workdesk types
  Provide workdesk types for further classification of workdesks.

Detailed information about this topic

- Configuration parameters for managing devices and workdesks on page 205

Creating and editing device models

The prerequisite for adding devices is the definition of device models. Device models are required to classify devices, for example, PC, server, monitor, printer types. One Identity
Manager contains predefined device models. You can define more device models.

To create or edit a device model

1. In the Manager, select the Devices & Workdesks > Basic configuration data > Device models category.
2. In the result list, select a device model and run the Change main data task.
   - OR -
   Click in the result list.
3. Edit the device model’s main data.
4. Save the changes.

### Property | Description
---|---
data | 
PC | Specifies whether, in principle, the device can be used as a PC in the sense of workstation.  
Server | Specifies whether the device is used as a server.  
Local peripheral | Specifies whether this device type is a local peripheral to attach to a PC.  
Deactivated | Specifies whether the device model is in use or not.

**NOTE:** Only device models which are enabled can be assigned in One Identity Manager. If a device model is deactivated, assignment of the device model is not permitted. However, existing assignments remain intact.

### Inventory data for device models

You can enter the following inventory and asset data for a device model.

**NOTE:** Prices are given to 2 decimal places by default. The number of decimal places to enter can be modified in the Designer. For more information, see the One Identity Manager Configuration Guide.

### Creating and editing device statuses

You can define the status that devices take on, for example: activated, deactivated, stored.

**To create or edit a device status**

1. In the Manager, select the **Devices & Workdesks > Basic configuration data > Device status** category.
2. In the result list, select a device status and run the **Change main data** task.
   - OR -
   - Click the button in the result list.
3. Edit the device's main data.
4. Save the changes.

Enter the following data for a device status.

**Table 46: Device status general data**

<table>
<thead>
<tr>

You can manage different devices with One Identity Manager, for example, workstations, servers, monitors, printers, or other devices.

**To create or edit a device**

1. In the Manager, select the **Devices & Workdesks > Devices** category.
2. Select one of the following nodes.
   - Personal computer
   - Server
   - Monitors
   - Printer
   - Mobile telephones
   - Tablets
   - Miscellaneous

   Depending on the selected filter, the device model is specified and the corresponding form for editing the main data determined when a new device is added.
3. In the result list, select a device and run the **Change main data** task.
   - OR -
   Click 📋 in the result list.
4. Edit the device’s main data.
5. Save the changes.

# Assigning company resources to devices

One Identity Manager uses different assignment types to assign company resources.

- **Indirect assignment**
  
  In the case of indirect assignment of company resources, employees, devices, and workdesks are arranged in departments, cost centers, locations, business roles, or application roles. The total of assigned company resources for an employee, device, or workdesk is calculated from the position within the hierarchies, the direction of inheritance (top-down or bottom-up) and the company resources assigned to these roles. In the Indirect assignment methods a difference between primary and secondary assignment is taken into account.

- **Direct assignment**
  
  Direct assignment of company resources results from the assignment of a company resource to an employee, device, or workdesk, for example. Direct assignment of company resources makes it easier to react to special requirements.

- **Assignment by dynamic roles**
  
  Assignment through dynamic roles is a special case of indirect assignment. Dynamic roles are used to specify role memberships dynamically. Employees, devices, and workdesks are not permanently assigned to a role, just when they fulfill certain conditions. A check is performed regularly to assess which employees, devices, or workdesks fulfill these conditions. The means the role memberships change dynamically. For example, company resources can be assigned dynamically to all employees in a department in this way; if an employee leaves the department they immediately lose the resources assigned to them.

The following table shows the possible company resources assignments to devices.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>

**Assigning devices to departments, cost centers, and locations**

Assign devices to departments, cost centers, and locations so that they obtain company resources through these organizations. To assign company resources to departments, cost centers, and locations, use the appropriate organization tasks.
To assign a device to departments, cost centers, and locations (secondary assignment; default method)

1. In the Manager, select the Device & Workdesks > Basic configuration data > <filter> category.
2. Select the device in the result list.
3. Select the Assign organizations task.
4. In the Add assignments pane, assign the organizations:
   - On the Departments tab, assign departments.
   - On the Locations tab, assign locations.
   - On the Cost centers tab, assign cost centers.

   TIP: In the Remove assignments pane, you can remove assigned organizations.

To remove an assignment

   - Select the organization and double-click ⌁.

5. Save the changes.

To assign a device to departments, cost centers, and locations (primary assignment)

1. In the Manager, select the Device & Workdesks > Basic configuration data > <filter> category.
2. Select the device in the result list.
3. Select the Change main data task.
4. Adjust the following main data:
   - Primary department: Department to which the device is assigned.
   - Primary cost center: Cost center to which the device is assigned.
   - Primary location: Location to which the device is assigned.

5. Save the changes.

Assigning devices to business roles

| NOTE: This function is only available if the Business Roles Module is installed. |

Assign devices to business roles such that the devices obtain company resources through these business roles. To assign company resources to business roles use the corresponding business role tasks. For more information about working with business roles, see the One Identity Manager Business Roles Administration Guide.

To assign a device to business roles (secondary assignment; default method)

1. In the Manager, select the Device & Workdesks > <filter> category.
2. Select the device in the result list.
3. Select the Assign business roles task.
4. In the Add assignments pane, select the role class and assign business roles.
   
   TIP: In the Remove assignments pane, you can remove assigned business roles.

   To remove an assignment
   
   - Select the business role and double-click ✓.

5. Save the changes.

To assign a device to business roles (primary assignment)

1. In the Manager, select the Device & Workdesks > <filter> category.
2. Select the device in the result list.
3. Select the Change main data task.
4. In the Primary business role menu, select the business role to assign to the device.
5. Save the changes.

Related topics

Displaying the device overview

Use this task to obtain an overview of the most important information about a device.

To obtain an overview of a device

1. In the Manager, select the Device & Workdesks > Basic configuration data > <filter> category.
2. Select the device in the result list.
3. Select the Device overview task.

**Entering service agreements and calls for devices**

| NOTE: This function is only available if the Helpdesk Module is installed. 

Use the Helpdesk Module to enter service agreements and calls for a device. For more information about the help desk, see One Identity Manager Help Desk Module User Guide.

**To enter help desk data for a device**

1. In the Manager, select the Device & Workdesks > Basic configuration data > <filter> category.
2. Select the device in the result list.
3. Select the Assign service agreements task to assign the valid service agreements to the device. The service agreements are taken into account when calculating solution and reaction times in the case of a help desk call for this device.
4. Select the Show calls task to display calls entered for a device.
5. Select the New call task, to enter a new call.
6. Save the changes.

**Creating and editing workdesks**

Workdesks are used to assign various devices to a workstation or a server. The assignment of company resources can be mainly automated by assigning workdesks to business roles, departments, cost centers, locations, or dynamic roles.

| TIP: To create a workdesk automatically when you create a device for a workstation or a server, set the Hardware | Workdesk | WorkdeskAuto configuration parameter in the Designer.

**To create or edit a workdesk**

1. In the Manager, select the Devices & Workdesks > Workdesks > Names category.
2. In the result list, select a workdesk and run the Change main data task.
   - OR -
   Click in the result list.
3. Edit the workdesk's main data.
4. Save the changes.

**Assigning company resources to workdesks**

One Identity Manager uses different assignment types to assign company resources.
Indirect assignment
In the case of indirect assignment of company resources, employees, devices, and workdesks are arranged in departments, cost centers, locations, business roles, or application roles. The total of assigned company resources for an employee, device, or workdesk is calculated from the position within the hierarchies, the direction of inheritance (top-down or bottom-up) and the company resources assigned to these roles. In the Indirect assignment methods a difference between primary and secondary assignment is taken into account.

Direct assignment
Direct assignment of company resources results from the assignment of a company resource to an employee, device, or workdesk, for example. Direct assignment of company resources makes it easier to react to special requirements.

Assignment by dynamic roles
Assignment through dynamic roles is a special case of indirect assignment. Dynamic roles are used to specify role memberships dynamically. Employees, devices, and workdesks are not permanently assigned to a role, just when they fulfill certain conditions. A check is performed regularly to assess which employees, devices, or workdesks fulfill these conditions. The means the role memberships change dynamically. For example, company resources can be assigned dynamically to all employees in a department in this way; if an employee leaves the department they immediately lose the resources assigned to them.

The following table shows the possible company resources assignments to workdesks.

**NOTE:** Company resources are defined in One Identity Manager modules and are not available until the modules are installed.

Assigning workdesks to departments, cost centers, and locations

Assign workdesks to departments, cost centers, and locations so that they obtain company resources through these organizations. To assign company resources to departments, cost centers, or locations, use the appropriate organization tasks.

To assign a workdesk to departments, cost centers, and locations (secondary assignment; default method)

1. In the Manager, select the Devices & Workdesks > Workdesks > Names category.
2. Select the workdesk in the result list.
3. Select the Assign organizations task.
4. In the Add assignments pane, assign the organizations:
   - On the Departments tab, assign departments.
   - On the Locations tab, assign locations.
   - On the Cost centers tab, assign cost centers.

   TIP: In the Remove assignments pane, you can remove assigned organizations.

   To remove an assignment
   - Select the organization and double-click ☑.
5. Save the changes.

To assign a workdesk to departments, cost centers, and locations (primary assignment)

1. In the Manager, select the Devices & Workdesks > Workdesks > Names category.
2. Select the workdesk in the result list.
3. Select the Change main data task.
4. Adjust the following main data:
   - **Primary department**: Department to which the workdesk is assigned.
   - **Primary cost center**: Cost center to which the workdesk is assigned.
   - **Primary location**: Location to which the workdesk is assigned.

5. Save the changes.

Assigning workdesks to business roles

NOTE: This function is only available if the Business Roles Module is installed.

Assign the workdesk to business roles so that the workdesk obtains its company resources through these business roles. To assign company resources to business roles use the corresponding business role tasks. For more information about working with business roles, see the One Identity Manager Business Roles Administration Guide.

**To assign a workdesk to business roles (secondary assignment; default method)**

1. In the Manager, select the Devices & Workdesks > Workdesks > Names category.
2. Select the workdesk in the result list.
3. Select the Assign business roles task.
4. In the Add assignments pane, select the role class and assign business roles.

   TIP: In the Remove assignments pane, you can remove assigned business roles.

**To remove an assignment**

- Select the business role and double-click ✔.

5. Save the changes.

**To assign a workdesk to business roles (primary assignment)**

1. In the Manager, select the Devices & Workdesks > Workdesks > Names category.
2. Select the workdesk in the result list.
3. Select the Change main data task.
4. In the Primary business role menu, select the business role to assign to the workdesk.
5. Save the changes.

Entering calls for workdesks

NOTE: This function is only available if the Helpdesk Module is installed.

Use the Helpdesk Module to enter service agreements and calls for a workdesk. For more information about the help desk, see One Identity Manager Help Desk Module User Guide.

To enter help desk data for a workdesk

1. Select the Devices & Workdesks > Workdesks > Names category.
2. Select the workdesk in the result list.
3. Select Show calls, to show the calls entered for a workdesk.
4. Select the New call task, to enter a new call.
5. Save the changes.

Asset data for devices

One Identity Manager offers the possibility for the administration of data for assets and accounting within the framework of inventory management. Further information about business partners, ownership (leasing, purchasing, renting) and the associated contract information about cost and time periods belongs here. For the assets inventory management, data can be taken from another system and adopted by the One Identity Manager. For example a file extracted from the SAP R/3 assets accounting can act as data source.

To use this function

- In the Designer, set the Hardware | AssetAccounting configuration parameter and compile the database.

NOTE: If you disable the configuration parameter at a later date, model components and scripts that are not longer required, are disabled. SQL procedures and triggers are still carried out. For more information about the behavior of preprocessor relevant configuration parameters and conditional compiling, see the One Identity Manager Configuration Guide.

Managing resources

One Identity Manager not only offers the possibility to map IT resources but also non-IT resources such as mobile telephones, desks, company cars, and keys: in other words, everything that is necessary to create an efficient working environment for an employee. You can assign resources directly to an employee or through classification into hierarchical roles in the One Identity Manager. Similarly, you can resources request for an employee through the IT Shop.

Resources are divided up from a functional point of view.

Table 61: Resource types

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
<th>Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resources</td>
<td>Resources that an employee (workdesk, device) may own just once. The resources can be requested in the IT Shop just once. The resources are assigned to the employees after approval has been granted. They remain assigned until the request is unsubscribed. You can request them again a later point. Example: phone, company car.</td>
<td>QERRResource</td>
</tr>
<tr>
<td>Multi-request resources</td>
<td>Resources that can be requested more than once in the IT Shop. Requests are automatically canceled once approved. The resources are not explicitly assigned to employees. Example: resource for requesting remote desktop sessions for assets in a PAM system; consumables, such as pens, printing paper.</td>
<td>QERRReuse</td>
</tr>
<tr>
<td>Multi requestable/unsubscribable resources</td>
<td>Resources that an employee can request more than once in the IT Shop but must return them explicitly once they are no longer needed. The resources are assigned to the employees after approval has been granted. They remain assigned until the request is canceled.</td>
<td>QERRReuseUS</td>
</tr>
</tbody>
</table>
Assignment resources are special resources for requesting any number of assignments to hierarchical roles or to delegate responsibilities in the IT Shop. For detailed information about assignment resources, see the One Identity Manager IT Shop Administration Guide.

Basic data for resources

The following basic data is required for managing resources.

- Resource types
  You can use resource types to group resources.
- Extended properties
  Extended properties are meta objects, such as operating codes, cost codes, or cost accounting areas that cannot be mapped directly in One Identity Manager.

Detailed information about this topic

- Resource types on page 180
- Creating and editing extended properties on page 195

Resource types

You can use resource types to group resources.

To create or edit resource types

1. In the Manager, select the Entitlements > Basic configuration data > Resource types category.
2. In the result list, select an resource type and run the Change main data task.
   - OR –
   Click in the result list.
3. Enter a name and description for the resource type.
4. Save the changes.
Creating and editing resources

To create or edit resources

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list and run the Change main data task.
   - OR -
   Click in the result list.
3. Edit the resource’s main data.
4. Save the changes.

Assigning resources to employees

Resources can be assigned to employees directly, indirectly, or through IT Shop requests. In the case of indirect assignment employees and resources are arranged in hierarchical roles. The number of resources assigned to an employee is calculated from the position in the hierarchy and the direction of inheritance. Add employees to a shop as customers so that resources can be assigned through IT Shop requests. All resources, which are assigned
to this shop can be requested by the customers. Requested resources are assigned to the employees after approval is granted.

The prerequisite for indirect assignment of resources to employees is:
- Assignment of employees and resources is permitted for role classes (departments, cost centers, locations, or business roles).

Detailed information about this topic
- Permitting assignments of employees, devices, workdesks, and company resources to roles on page 28
- Basic principles for assigning company resources on page 15

Assigning resources to departments, cost centers, and locations

Assign a resource to departments, cost centers or locations such that employees inherit the resource through these organizations.

To assign a resource to departments, cost centers and locations
1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select the Assign organizations task.
4. In the Add assignments pane, assign the organizations:
   - On the Departments tab, assign departments.
   - On the Locations tab, assign locations.
   - On the Cost centers tab, assign cost centers.

   **TIP:** In the Remove assignments pane, you can remove assigned organizations.

   **To remove an assignment**
   - Select the organization and double-click.
5. Save the changes.

Related topics

Assigning resources to business roles

| NOTE: | This function is only available if the Business Roles Module is installed.

Assign a resource to business roles such that the resource is inherited by employees through these business roles. For more information about working with business roles, see the One Identity Manager Business Roles Administration Guide.

To assign a resource to business roles

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select the Assign business roles task.
4. In the Add assignments pane, select the role class and assign business roles.
   - TIP: In the Remove assignments pane, you can remove assigned business roles.
   - To remove an assignment
     - Select the business role and double-click ☑.
5. Save the changes.

Assigning resources directly to employees

Resources can be assigned directly or indirectly to employees. Indirect assignment is carried out by allocating employees and resources in company structures, like departments, cost centers, locations, or business roles.

To react quickly to special requests, you can assign resources directly to employees.

To assign a resource directly to employees

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select the Assign to employees task.
4. In the Add assignments pane, add employees.
   - TIP: In the Remove assignments pane, you can remove assigned employees.
   - To remove an assignment
     - Select the employee and double-click ☑.
5. Save the changes.
Adding resources to the IT Shop

Once a resource has been assigned to an IT Shop shelf, it can be requested by the shop customers. There are other prerequisites required to make a resource requestable.

- The resource must be labeled with the **IT Shop** option.
- The resource must be assigned to a service item.
- The resource must be also labeled with the **Only use in IT Shop** option if it is only to be assigned to employees by means of IT Shop requests. Then, the resource may not be assigned directly to hierarchical roles.

For more information about requesting company resources through the IT Shop, see the *One Identity Manager IT Shop Administration Guide*.

**To add a resource to the IT Shop**

1. In the Manager, select the **Entitlements > Resources** category.
2. Select a resource in the result list.
3. Select the **Add to IT Shop** task.
4. In the **Add assignments** pane, assign the resource to the IT Shop shelves.
5. Save the changes.

**To remove a resource from individual IT Shop shelves**

1. In the Manager, select the **Entitlements > Resources** category.
2. Select a resource in the result list.
3. Select the **Add to IT Shop** task.
4. In the **Remove assignments** pane, remove the resource from the IT Shop shelves.
5. Save the changes.

**To remove resource from all IT Shop shelves**

1. In the Manager, select the **Entitlements > Resources** category.
2. Select a resource in the result list.
3. Select the **Remove from all shelves (IT Shop)** task.
4. Confirm the security prompt with **Yes**.
5. Click **OK**.
The resource is removed from all shelves by the One Identity Manager Service. All requests and assignment requests that include this resource are canceled in the process.

Adding resources in system roles

| NOTE: | This function is only available if the System Roles Module is installed. |
A resource can be added to different system roles. A system role that only contains resources can be labeled with the Resource package system role type. Resources can also be added to system roles that are not resource packages. When you assign a system role to an employee the resource is assigned to the employee.

For detailed information about working with system roles, see the One Identity Manager System Roles Administration Guide.

| NOTE: | Resources with the Only use in IT Shop option set can only be assigned to system roles that also have this option set. |

To assign a resource to system roles

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select the Assign system roles task.
4. In the Add assignments pane, assign system roles.
   
   TIP: In the Remove assignments pane, you can remove assigned system roles.

   To remove an assignment
   
   - Select the system role and double-click.

5. Save the changes.

Displaying the resources overview

Use this task to obtain an overview of the most important information about a resource. The affiliation of the resource to hierarchical roles and IT Shop structures counts in this here.
To obtain an overview of a resource

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select the Resource overview task.

Assigning extended properties to resources

Extended properties are meta objects, such as operating codes, cost codes, or cost accounting areas that cannot be mapped directly in One Identity Manager.

To specify extended properties for an resource

1. In the Manager, select the Entitlements > Resources category.
2. Select a resource in the result list.
3. Select Assign extended properties.
4. In the Add assignments pane, assign extended properties.
   
   **TIP:** In the Remove assignments pane, you can remove assigned extended properties.

To remove an assignment

- Select the extended property and double-click ✓.

5. Save the changes.

Detailed information about this topic

- Creating and editing extended properties on page 195

Creating and editing multi-request resources

You can only edit multi-request resources if the QER | ITShop configuration parameter is set.

- In the Designer, check if the configuration parameter is set. Otherwise, set the configuration parameter and compile the database.
To create or edit multi-request resources

1. In the Manager, select the Entitlements > Multi-request resources for IT Shop category.
2. Select a resource in the result list and run the Change main data task.
   - OR -
     Click 🔄 in the result list.
3. Edit the multi-request resource's main data.
4. Save the changes.

To create or edit multi requestable/unsubscribable resources

1. In the Manager, select the Entitlements > Multi requestable/unsubscribable resources for IT Shop category.
2. Select a resource in the result list and run the Change main data task.
   - OR -
     Click 🔄 in the result list.
3. Edit the multi requestable/unsubscribable resource's main data.
4. Save the changes.

## Assigning multi-request resources to employees

Assign multi requestable resources through IT Shop requests to employees. To do this, add employees to a shop as customers. All resources, which are assigned to this shop can be requested by the customers. For more information, see the One Identity Manager IT Shop Administration Guide.
Detailed information about this topic

- Adding multi-request resources to the IT Shop on page 190
- Assigning company resources through IT Shop requests on page 19

Adding multi-request resources to the IT Shop

A multi-request resource can be requested by shop customers when it is assigned to an IT Shop shelf. For more information, see the One Identity Manager IT Shop Administration Guide.

To set up multi-request resources and add them as products in the IT Shop

1. In the Manager, select the Entitlements > Multi-request resources for IT Shop category.
2. Click in the result list.
3. Edit the resource's main data.
4. Save the changes.
5. Select the Add to IT Shop task.
   In the Add assignments pane, assign a shelf.
   **TIP:** In the Remove assignments pane, you can remove shelf assignments.

   **To remove an assignment**
   - Select the shelf and double-click.
6. Save the changes.

To set up multi requestable/unsubscribable resources and to add them as products to the IT Shop

1. In the Manager, select the Entitlements > Multi requestable/unsubscribable resources for IT Shop category.
2. Click in the result list.
3. Edit the resource's main data.
4. Save the changes.
5. Select the Add to IT Shop task.
   In the Add assignments pane, assign a shelf.
   **TIP:** In the Remove assignments pane, you can remove shelf assignments.
To remove an assignment

- Select the shelf and double-click.

6. Save the changes.

To remove multi-request resources from all IT Shop shelves

1. In the Manager, select the Entitlements > Multi-request resources for IT Shop category.
   - OR -
   In the Manager, select the Entitlements > Multi requestable/unsubscribable resources for IT Shop category.
2. Select a resource in the result list.
3. Select the Remove from all shelves (IT Shop) task.
4. Confirm the security prompt with Yes.
5. Click OK.
   The resource is removed from all shelves by the One Identity Manager Service. This cancels all requests for this resource.

Displaying the multi-request resource overview

Use this task to obtain an overview of the most important information about a multi-request resource. For this, take into account the affiliation of the resource to IT Shop structures.

To obtain an overview of a multi-request resource

1. In the Manager, select the Entitlements > Multi-request resources for IT Shop category.
2. Select a resource in the result list.
3. Select the Multi-Request resource overview task.

To obtain an overview of a requestable/unsubscribable resource

1. In the Manager, select the Entitlements > Multi requestable/unsubscribable resources for IT Shop category.
2. Select a resource in the result list.
3. Select the Multi requestable/Unsubscribable resource overview task.
Reports about resources

One Identity Manager makes various reports available containing information about the selected base object and its relations to other One Identity Manager database objects. The following reports are available for resources.

| NOTE: Other sections may be available depending on the which modules are installed.

Table 65: Reports about resources

Assigning additional property groups to extended properties

Each extended property must be assigned to at least one property group. Furthermore, you can assign the extended properties to any other property groups. If an extended property needs to be assigned to several property groups, then you can use the Assign property groups task to assign additional property groups.

To assign an extended property to a property group

1. In the Manager, select the Entitlements > Basic configuration data > Extended properties > <property group> category.
2. Select the extended property in the result list.
3. Select the Assign property groups task.
4. In the Add assignments pane, assign property groups.
   
   **TIP:** In the Remove assignments pane, you can remove assigned property groups.

   **To remove an assignment**
   
   - Select the property group and double-click ☑.

5. Save the changes.

Related topics

- Main data for extended properties on page 195

Specifying scope limits for extended properties

You can subdivide extended properties by specifying scoped limits. You are not obliged to enter scoped limit. If you do enter a lower boundary you are not required to enter an upper one. However, if you specify an upper boundary, you have to enter a lower one.

Take note of the following when defining scoped limits:

- Basically, any string is permitted as a lower or upper scoped limit.
- You can use * as a wildcard for any number of characters (even null).
- Wild cards can only be added to the end of a string, for example, AB*. Strings such as *AB or A*B are not allowed, for example.
If you enter a lower boundary without a wildcard, you cannot use a wildcard in the upper boundary.

The following restrictions apply for the length of the string:

- If you enter a lower and upper boundary without a wildcard, the strings have to be the same length, for example, lower boundary 123/upper boundary 456. A lower boundary of 123 and an upper of 45, for example, is not permitted or a lower boundary 123/upper boundary 4567 is also not allowed.
- If you use a wildcard in the lower boundary but none in the upper boundary, then the length of the upper boundary string needs to be the same as or bigger than the string in the lower boundary.
- If you use a wildcard in the lower and upper boundary, they have to be the same length, for example, lower boundary 123*/upper boundary 456*. A lower boundary of 123* and an upper of 45*, for example, is not permitted or a lower boundary 123*/upper boundary 4567* is also not allowed.

### Displaying the extended properties overview

Use this task to obtain an overview of the most important information about an extended property. For this you need to take into account the affiliation of the extended property to the different One Identity Manager objects.

**To obtain an overview of an extended property**

1. In the Manager, select the Entitlements > Basic configuration data > Extended properties > `<property group>` category.
2. Select the extended property in the result list.
3. Select the Extended property overview task.

**To obtain an overview of a property group**

1. In the Manager, select the Entitlements > Basic configuration data > Extended properties category.
2. Select a property group in the result list.
3. Select the Property group overview task.
Assigning objects to extended properties

You can assign extended properties to company resources, hierarchical roles, and employees.

To assign objects to an extended property

1. In the Manager, select the Entitlements > Basic configuration data > Extended properties > <property group> category.
2. Select the extended property in the result list.
3. Select the Assign objects task.
4. In the Table menu, select the required object type.
   The object belonging to the object types are displayed on the form.
5. In the Add assignments pane, assign objects.
   TIP: In the Remove assignments pane, you can remove object assignments.

To remove an assignment

- Select the object and double-click ☑.

6. Save the changes.

</table>

If the configuration parameter is set, login is possible. If the configuration parameter is not set, employees who are classified as security risk are not allowed to log in (default). If the configuration parameter is set, the central user account for an employee is formed uniquely in relation to the central user accounts of all employees and the user account names of all permitted target systems. If the configuration parameter is not set, it is only formed uniquely related to the central user accounts of all employees. If this parameter is set, the main identity is used for...

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales and other inquiries, such as licensing, support, and renewals, visit https://www.oneidentity.com/company/contact-us.aspx.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at https://support.oneidentity.com/.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
