

On Demand Migration Desktop Update Agent (DUA) Version 2.0

Release Notes

August 2022

To complete a migration project and reconfigure a user's applications, agents must be configured and deployed by administrators, then run on users' workstations.

Desktop Update Agent provides the ability to manage users' application reconfiguration activities from a single view within On Demand Migration. Migration administrators can configure which applications will be reconfigured, track each application's status, and send notices to remind users if required.

These release notes provide information about the On Demand Migration Desktop Update Agent 2.0 deployment.

Topics:

- [New features](#)
- [Enhancements](#)
- [Deprecated features](#)
- [Release History](#)
- [Incident response management](#)
- [System requirements](#)
- [FAQs](#)
- [Product licensing](#)
- [More resources](#)
- [About us](#)

New features

New features in Desktop Update Agent 2.0:

- Ability to configure desktop applications using a target Microsoft 365 tenant account.

See also:

- [Enhancements](#)

Enhancements

The following enhancement is implemented in this release of On Demand Migration Desktop Update Agent.

General improvements	Issue ID
Previous versions of Desktop Update Agent relied on hidden message stored in the source mailbox on Outlook to retrieve application reconfiguration details from On Demand Migration. The current implementation removes this limitation by allowing users to reconfigure their application using their target Microsoft 365 tenant account if the agent cannot access the source mailbox through Outlook.	322542

Deprecated features

The following is a list of features that are no longer supported starting with Desktop Update Agent 2.0.

- The “Direct Download” option is no longer supported.

i **NOTE:** If required, you can use this method with ‘legacy’ 1.x agents, but you will not have access to new features.

Known issues

The following is a list of issues, including those attributed to third-party products, known to exist at the time of release.

Table 1: General known issues

Known Issue	Issue ID
If the Desktop Update Agent is stopped suddenly (for example, due to an unexpected computer restart or stopping the agent through Task Manager), On Demand Migration will not be updated with the in-flight results. If progress in the agent is stopped between steps by choosing Cancel, the state of each step is reported to On Demand Migration and the On Demand Migration dashboard will reflect what was	376672

Known Issue	Issue ID
completed.	
DUA License reset is only supported for Azure Joined, Hybrid Azure Joined, or workplace joined, on Windows 10 1803 build and later.	268828
DUA will run office reset and clear saved credential cache with CD-Key version of the office installed.	267928

Release History

The following lists the new features, enhancements, and resolved issues by release.

Current Deployment

Desktop Update Agent version 2.0

Feature	Issue ID
<p>Previous versions of Desktop Update Agent relied on hidden message stored in the source mailbox on Outlook to retrieve application reconfiguration details from On Demand Migration.</p> <p>The current implementation removes this limitation by allowing users to reconfigure their application using their target Microsoft 365 tenant account if the agent cannot access the source mailbox through Outlook.</p>	322542

Previous Deployments

Desktop Update Agent version 1.2.3

Resolved Issues	Issue ID
Ability to locate source One Drive account when the source UPN and email are not the same.	369021
When running DUA for more than one user on the same workstation, the Microsoft 365 application license reset step may fail with an Access Denied error in the DUA logs. This is caused by a temporary file, output.txt, that is left behind in the directory C:\ProgramData\Quest\DUA\WPJCleanUp. This fix gives the file a unique name, and removes it after processing, unless some other error is encountered during the license cleanup step.	370854

Desktop Update Agent version 1.2.2

Enhancements	Issue ID
Installer improved so that the agent does not need to be uninstalled before updating to a newer version.	362409
Update RestSharp to 106.15.0.	350956
Resolved Issues	Issue ID
After switching Outlook and running DUA with Source Profile selected, the Outlook status may display as 'not started' instead of 'reconfiguration completed'.	358570
When Outlook.exe is not found in the expected registry path, the agent will also search the ClickToRun path. This will correct the Null Pointer Exception (NPE) error in the "SecureString ConvertToSecureString" when the Outlook.exe is not found.	360998

Desktop Update Agent version 1.2.1

Resolved Issues	Issue ID
When DUA performs the Outlook reconfiguration task, Outlook will not be restarted immediately. It will be restarted after the agent has performed all of the required tasks. If Outlook is running when DUA starts the OneDrive reconfiguration task, users are prompted to close Outlook before proceeding. This avoids Outlook potentially using files from OneDrive and blocking the local folder rename action.	352609

Desktop Update Agent version 1.2.0

Enhancements	Issue ID
Ability to retain OneDrive file locations when reconfiguring a OneDrive application.	253355
Windows 11 support.	312718
Resolved Issues	Issue ID
Agent sending unexpected status "Configured for different user" to On Demand Migration.	324563
Microsoft Teams failed to switch due to hooks.json issue.	324564
French localization issues.	323528
Unexpected runtime exceptions reported in the exit stage of the supporting DUA agents.	323735
.NET version updated to 4.7.2.	324623
Issue when One Drive target email and UPN are different than the source.	331372

Desktop Update Agent version 1.1.3.0

Resolved Issues	Issue ID
Incorrect DUA version is displayed in the Windows Apps & Features list.	321690
DUA version is not displayed in the About box.	321656
DUA closes unexpectedly after successfully completing the Microsoft Outlook step in the migration project.	321806

Desktop Update Agent version 1.1.2.0

Enhancements	Issue ID
An information message is displayed if DUA times out waiting for the Microsoft OneDrive Set up wizard to complete.	318446

Desktop Update Agent version 1.1.1.0

Enhancements	Issue ID
An information message is displayed when no agent is found. This is to alert the user so that the agent does not exit silently.	317410

Resolved Issues	Issue ID
Issue when multiple profiles are available and a user selects a profile other than the first in the list.	316641

Desktop Update Agent version 1.1.0.0

Enhancements	Issue ID
Logging improvements	
A single unified log file is created for each run with a name based on the workstation name and time of the session. By default, a less verbose log is generated.	282268
Communication improvements	
On Demand Migration API calls now include automatic retry. This improves robustness in case of transient issues with internet connectivity.	267172
TLS 1.2 support for improved connection security.	285254
User Experience enhancements	
Agent localized for Simplified Chinese, German, French, and Japanese.	269016
Various usability improvements.	289479

Enhancements	Issue ID
Ability to close Outlook and/or Teams from within DUA.	289478
Tasks reordered to resolve a Teams issue.	275077
Resolved Issues	Issue ID
An exception related to timeout waiting for OneDrive credentials.	277959
Unable to attach the PST file to Outlook after reconfiguration.	302055
Issue with Teams moving to target when Outlook Profile is not processed.	275077

Incident response management

Quest Operations and Quest Support have procedures in place to monitor the health of the system and ensure any degradation of the service is promptly identified and resolved. On Demand relies on Azure and AWS infrastructure and as such, is subject to the possible disruption of these services. You can view the following status pages:

- Quest On Demand: <https://status.quest-on-demand.com/>
- Azure Services: <https://azure.microsoft.com/en-ca/status/>
- AWS Services: <https://status.aws.amazon.com/>

System requirements

Before you begin a migration project and agent deployment, ensure that your systems meet the following minimum requirements.

General Requirements

- Client has been licensed for On Demand Migration.
- Access to a Global Administrator account for each Microsoft 365 tenant.
- Disable policies that prevent Outlook Profile, OneDrive for Business, and Microsoft Teams application changes or creation.
- If applicable, users have been provided new or temporary password for the account in the new target destination Microsoft 365 tenant.
- Source and target users have matching attribute values to identify and pair objects together for mailbox and OneDrive content synchronization.

i **TIP:** Try [Password Sync](#) for On Demand Migration Active Directory to keep your migrated hybrid users synchronized so when they are moved, they keep their existing password.

License Requirements

Before starting a migration, each target user account must be licensed for each application that will be reconfigured using Desktop Update Agent. The following licenses are required:

- Exchange Online if configuring Outlook profiles.
- SharePoint Online if configuring OneDrive for Business application.
- Microsoft Teams if configuring Microsoft Teams application.

i **NOTE:** On Demand Migration can automatically assign these licenses to target user accounts during the email and OneDrive migration process.

Software Requirements

i **NOTE:** If OneDrive for Business, Microsoft Teams, Outlook, or Office are not installed on the workstation, those applications will be skipped and not impact any other applications present during the reconfiguration.

The minimum version requirements for software installed on user's workstations:

- Outlook 2016 (32-bit or 64-bit) or higher
- OneDrive for Business (Most recent updates recommended)
- Microsoft Teams (Most recent updates recommended)
- Windows 10 (32-bit or 64-bit) or Windows 11
- .NET 4.7.2 or higher
- Microsoft 365 Apps (Office Click-to-Run Version Only)

i **NOTE:** Microsoft Office Professional Plus is not supported for Office license reset.

Network Requirements

The minimum network requirements to run Desktop Update Agent:

- The On Demand Migration API for the Desktop Update Agent is secured by Azure Active Directory through a Quest tenant. If your network restricts access to Azure Active Directory tenants, ensure that the Quest tenant "quest.com"/91c369b5-1c9e-439c-989c-1867ec606603 is added to the permitted tenant list.
- Internet access using port 443.
- Internet access to download the executable (optional).
- Internet access to connect to Microsoft 365.

- Internet access to On Demand Migration Endpoints. (**NOTE:** Proxies or security applications that intervene in network access may prevent the agent from connecting to On Demand Migration. Check the agent logs for details if this occurs.)
 - Internet access to Exchange Online "Autodiscover" endpoints at:
 - Global: <https://autodiscover-s.outlook.com/autodiscover>
Optionally, you can use the equivalent '.us' Government Community Cloud (GCC) endpoints, when applicable.
 - China: <https://autodiscover-s.partner.outlook.cn/autodiscover>
 - Germany: <https://autodiscover-s.outlook.de/autodiscover> (deprecated)
 - Local access to read/write the following registry keys on the end-user's workstation:
 - Outlook 2010: HKEY_CURRENT_USER\Software\Microsoft\Windows NT\CurrentVersion\Windows Messaging Subsystem
 - Outlook 2013: HKEY_CURRENT_USER\Software\Microsoft\Office\15.0
 - Outlook 2016: HKEY_CURRENT_USER\Software\Microsoft\Office\16.0
 - Outlook 32-bit: HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Microsoft\Office
 - Outlook 64-bit: HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Office

i **NOTE:** During this process, the Outlook Profile will be copied to a new Profile directed to the target account. Due to this configuration, a new OST download will occur based on each user's current cache settings, if enabled. To avoid network congestion try disabling or curtailing the cache settings to a lower amount of data then slowly increase it as needed. This can be accomplished through policies.

Supported Authentication

On Demand Migration Desktop Update Agent supports environments that use:

- Active Directory Federation Services (AD FS)
- Single Sign On (SSO) with mixed authentication modes, such as:
 - Modern Authentication (ADAL)
 - Forms Authentication
 - Windows Integrated Authentication

FAQs

The following is a list of frequently asked questions for On Demand Migration Desktop Update Agent.

- **Question:** Does DUA support multiple accounts in a single Outlook profile?
Answer: Currently DUA does not support reconfiguring Outlook when multiple mailbox accounts are associated with a single profile. Each additional mailbox must be added manually.
- **Question:** After DUA runs, my Outlook source profile is not removed. Is this expected?

Answer: Currently, yes. A future release will add the ability to remove the source profile once updates are complete.

- **Question:** How does DUA preserve the OneDrive folder and why was my source folder renamed?
Answer: Microsoft OneDrive for Business automatically sets the local folder name as “OneDrive – [OrganizationName]” where OrganizationName is the tenant organization name. This is the default folder name format cannot be changed.
To preserve the source OneDrive local folder, DUA must disconnect the source account and rename the folder based on the target tenant’s organization name. For example, if the target tenant’s Organization Name is XYZCorp, the folder will be renamed to “OneDrive – XYZCorp”.
- **Question:** Will the end-user’s synchronized local SharePoint folders be preserved when the Preserve Source OneDrive Folder option is enabled?
Answer: Users must re-sync their local SharePoint folders after DUA has disconnected the source OneDrive account and added the target OneDrive account on their workstation.
Local SharePoint folder syncs connected to the source OneDrive account are not preserved.
The migration administrator must validate that SharePoint migrations are completed successfully to ensure users have access to the target tenant’s SharePoint sites.
- **Question:** What happens if several Switch Tasks have been created? For example, can we create separate tasks for each type of application?
Answer: Desktop Update Agent acts on the most recent switch task. Previously created tasks are not processed by the agent.
- **Question:** How do I silently deploy Desktop Update Agent using a Command Line script?
Answer: To deploy DUA using a command line, use the following procedure:
 1. Download the Desktop Update Agent MSI file from the Downloads page. (The Token Key value found on the Downloads page and the Passphrase used when generating the token are required.)
 2. Create and run the PowerShell command with the required Token (Token Value) and Passphrase (Passprahse Value) values. For example: `msiexec.exe /I 'C:\DUA\ODM_DesktopUpdateAgent 2.0.msi' TOKEN=##### PASSPHRASE=##### /qn`
- **Question:** Desktop Update Agent cannot retrieve my user email address information when running, and the DUA agent log reports a message similar to "AADSTS500021: Access to 'Quest' tenant is denied." How can I fix this?
Answer: Desktop Update Agent needs to communicate with the On Demand Migration API to perform the application reconfiguration, and the API is secured by Azure AD through a Quest Software tenant. If your network restricts access to Azure Active Directory tenants, DUA cannot find the user's email information, and the DUA agent log reports a message similar to "AADSTS500021: Access to 'Quest' tenant is denied.". Ensure that the Quest tenant "quest.com"/91c369b5-1c9e-439c-989c-1867ec606603 is added to the permitted tenant list. Additional details related to Tenant Restriction Configuration can be found in [Microsoft documentation](#).

Product licensing

Quest On Demand is a Software as a Service (SaaS) application where application software is hosted in the cloud and made available to users through quest-on-demand.com.

Use of this software is governed by the Software Transaction Agreement found at www.quest.com/legal/sta.aspx and the SaaS Addendum at www.quest.com/legal/saas-addendum.aspx. This software does not require an activation or license key to operate.

You can sign in to Quest On Demand as a Guest user and sample the solutions the product can offer. As a Guest user, you can add your Azure AD tenant and look for problems that can be solved by Quest On Demand. To sign in as a Guest user, go to quest-on-demand.com and click **Continue as Guest**.

Trial licenses are available. To enable a trial license, you must use a Quest account to sign up for Quest On Demand. Use one of the following procedures:

- [To enable a trial license with an existing Quest account](#)
- [To create a Quest account and enable a trial license](#)

To enable a trial license with an existing Quest account

1. Go to <https://www.quest.com/on-demand/>
2. Scroll down to the module you are interested in and click **Try Online**.
3. On the Free Trial of <Module Name> page, click **Sign In for your Free Trial**.
4. Fill in your Quest account credentials and click **Sign In**. The Welcome to Quest On Demand page opens.
5. In the **Add organization name** field, enter a name for your Quest On Demand organization.
6. In the **Select Region** field, select the region where you want your data to reside.
7. Click **Create New Organization**.

You can now add your Azure AD tenant and begin using the module. See the Global Settings User Guide for more information on working with Quest On Demand.

To create a Quest account and enable a trial license

1. Go to <https://www.quest.com/on-demand/>
2. Scroll down to the module you are interested in and click **Try Online**.
3. To try online, you must create a Quest account and then sign up for Quest On Demand.
4. Create a Quest account.
 - a. Click **Create a Trial Account**.
 - b. Fill in the fields on the Create Account page. Note that the email and password entered here will be the credentials you use to sign in to Quest On Demand.
 - c. Click **Create Account**. The “We’ve sent you an email” page opens.
5. Sign in to Quest On Demand.
 - a. Go to your email account and open the email from support.quest.com. Click on the verification link. The Welcome to Quest On Demand page opens.
 - b. In the **Add organization name** field, enter a name for your Quest On Demand organization.
 - c. In the **Select Region** field, select the region where you want your data to reside.
 - d. Click **Create New Organization**.

You can now add your Azure AD tenant and begin using the module. See the Global Settings User Guide for more information on working with Quest On Demand.

About us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Microsoft 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.

Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
