Quest® KACE® Systems Deployment Appliance 9.0 Release Notes

This release notes document provides information about the Quest KACE Systems Deployment Appliance version 9.0.

About this release

The KACE Systems Deployment Appliance provides a network-centric solution for capturing and deploying images. The KACE Systems Deployment Appliance provides a seamless cross-platform imaging solution from a single Administrator Console enabling you to provision Microsoft® Windows®, Apple® OS X®, as well as Red Hat, CentOS and Ubuntu Linux platforms. You can deploy the configuration files, user states, and applications as an image to a single device or to multiple devices simultaneously.

The appliance provides the tools necessary to automate deployments in both homogeneous and heterogeneous hardware environments, and provides reliability of large-scale image deployments with multicast and task engine capabilities. The built-in driver feed allows for downloads of Dell drivers for business class model machines, while drivers from other manufacturers can be added manually with ease. You can also integrate the KACE Systems Deployment Appliance with the KACE Systems Management Appliance to image devices in the KACE Systems Management Appliance inventory. The KACE Systems Deployment Appliance is available as a virtual appliance.

The KACE Systems Deployment Appliance version 9.0 is a major release of the product which offers new features, enhancements, and resolved issues.

NOTE: The localized of this documents do not include information about resolve issues, enhancements, and known issues.

New features and enhancements

The following new features and enhancements are included in this release:

Table 1. New features and enhancements

Feature	Issue ID
Support for PCs with Secure Boot enabled in UEFI.	ESMEA-3318
<i>SDA Breadcrumb</i> task is changed to a mid-level task.	K2-7658
.NET/Powershell, Secure Startup and Platform ID are installed automatically in all new KBEs.	ESMEA-6207
User can now re-fingerprint source media.	ESMEA-6188

Feature	Issue ID
<code>powercfg</code> command line added to <code>startnet.cmd</code> of new KBEs increases performance.	ESMEA-6173
Windows 11 was added for Sysprepped Unattend Files.	ESMEA-6167
Users can now upload a background image for iPXE.	ESMEA-6162
Media Manager recognizes Windows 11 ADK and accounts for specific behaviors.	ESMEA-6159
<i>Capture and Disable UAC</i> task is changed to a mid-level task.	ESMEA-6150
Navigation improvements for sidebar are implemented in this version.	ESMEA-6146
USB deployments must now be created through the <i>Offline Deployment</i> wizard.	ESMEA-6144
SSL certification generation now has longer fields.	ESMEA-6143
Additional information about system images is gathered to better identify operating systems.	ESMEA-6119
The appliance now supports installation on the Nutanix platform.	ESMEA-6113
Imported KBEs update hard-coded IP address and Samba password.	ESMEA-6018
Driver Feed for Dell is now automated using Dell Driver Pack Catalog.	ESMEA-4452
Driver Feed for Lenovo is now available.	ESMEA-2526
Driver Feed for HP is now available.	ESMEA-2525

Resolved issues

The following is a list of issues resolved in this release.

Table 2. Resolved Issues

Resolved issue	Issue ID
Read-only images now show <i>Task XML</i> link on the detail page.	K2-7688
<code>setcomputername</code> now accepts the <code>/k2ipaddress:<SDA IP Address></code> switch to reach the appliance database when run from a Remote Site Appliance or Windows.	K2-7681
Manual configuration of the year for date and time settings is updated to include future years.	K2-7675
Labels can now be removed from assigned objects.	K2-7674

Resolved issue	Issue ID
Offline Deployment ISOs can now handle spaces in driverfeed names.	K2-7672
Split WIMs are named differently to account for images with more than nine parts.	K2-7670
ODBC drivers were not loading in KBE, older 5.0.1 drivers worked as expected.	K2-7667
Boot environment type is now properly updated after a KBE completes PXE booting.	K2-7666
Updated embedded scripts in iPXE to provide more DHCP options at finding server.	K2-7664
Synced RSA USMT profiles can now be viewed.	K2-7661
UI Notifications show for all subscribed users.	K2-7660
Items uploaded through <code>clientdrop</code> now operate correctly.	K2-7654
<i>Show</i> and <i>Hide</i> components in the Administrator Console are more consistent.	ESMEA-6093

Known issues

The following is a list of issues, including those attributed to third-party products, known to exist at the time of release.

Table 3. General known issues

Known issue	Issue ID
Upgrading with Hyper-V does not always mount the appropriate disk partition	K2-7527
CentOS 8 deployments fail when the repository cache is enabled.	K2-7517
It is not possible to enable SSL (secure socket layer) using an existing SSL certificate and key on the KACE Systems Deployment Appliance and RSA.	K2-7442
RHEL (Red Hat Enterprise Linux) and CentOS 7 manual deployment ends in <code>dracut</code> .	K2-7439
The filter tasks box is skewed when browser size is decreased.	K2-7435
An appliance iPXE error is reported: <code>no configuration methods succeeded</code> .	K2-7271
Custom Deployment does not display User States for deployment.	K2-7266
Certain task types cause screens to appear in front of the KBE page.	K2-7158
<code>Klonewin</code> stops responding due to network instability issue during file copying phase.	K2-7124

Known issue	Issue ID
After importing an MI created with All Operating System checkbox selected on the KACE System Management Appliance (SMA), the Runtime Environment is displayed as Windows on the KACE SDA server.	K2-7000
When importing same packages, duplicate entries are created on the appliance.	K2-6964
VMware virtual machines with multiple vCPUs (virtual central processing units) cannot PXE-boot to a legacy iPXE. For more information, read the following KB article: https://support.quest.com/kace-systems-deployment-appliance/kb/232911	K2-6769
After clicking New boot action for a Mac OS NetBoot on the <i>Boot Environment Detail</i> page, on the <i>Automated Detail</i> page that appears, the <i>Deployment</i> field is not set, as expected.	K2-6665
The path for drivers in the Driver Feed are not always unique which causes problems for Driver Feed widgets.	K2-6495
Japanese user profile is not listed in Available Profile List.	K2-6492
Imaging to Serial Attached SCSI (SAS) drives is extremely slow, five hours or longer.	K2-6476
The <i>Date and Time Settings</i> page should follow the language region date format.	K2-5509
When deploying a dual or multiple partition WIM image through multicast instead of unicast, only the first partition deploys. Workaround: A workaround is available for this issue. For more information, read the following KB article: https://support.quest.com/kace-systems-deployment-appliance/kb/212975	K2-5393
Resizing the columns width functionality does not work for certain columns on some list pages.	K2-5277
The Offboard Storage Error Message in the Initial Configuration Wizard should be moved into the same error message box used in other pages.	K2-5198
Detail View should highlight selected row in data table .	K2-5115
Non-ASCII KACE Systems Management Appliance (SMA) Managed Installation (MI) package name is garbled on the package import list.	K2-4381
Invalid date is allowed for the <i>Run once, on</i> option while creating or updating a scheduled boot action.	K2-4197
Non-English offline user state from Windows 8 is not scanned for K-Image or scripted installation.	K2-3555
<code>lagg0</code> does not appear in <code>munin</code> .	K2-3500
When switching between linked appliances, the drop-down list in the top-right corner of the Administrator Console should display only the linked appliances instead of all	K2-3241

Known issue	Issue ID
of the appliances to which you logged in to using single sign on (SSO) from the KACE SDA.	
When KACE SMA and KACE SDA are linked together, two boot actions are created for client machine with two network interface cards (NICs).	K2-3226
Clicking Remove local files not in image does not remove local files from non-system drive.	K2-2855

System requirements

The minimum version required for installing version 9.0 is the latest 8.2 version. If your appliance is running an earlier version, update to the listed version before installing this major release and restart the appliance after the update is installed. To check the version number of your appliance, log in to the KACE Systems Deployment Appliance Administrator Console, open the *Need Help* pane on the right, then click the About Appliance icon.

Before upgrading to or installing version 9.0, make sure that your system meets the minimum requirements. These requirements are available in the KACE Systems Deployment Appliance technical specifications: <http://support.quest.com/technical-documents/kace-systems-deployment-appliance/9.0-common-documents/technical-specifications-for-virtual-appliances/>.

Product licensing

If you currently have a KACE Systems Deployment Appliance product license, no additional license is required.

If you are using the KACE Systems Deployment Appliance for the first time, see the appliance setup documentation for product licensing details. Go to [More resources](#) to access the appropriate guide.

NOTE: Product licenses for version 9.0 can be used only on a KACE Systems Deployment Appliance version 9.0 or later. Version 9.0 licenses cannot be used on appliances running earlier versions of the KACE Systems Deployment Appliance, such as 7.0.

NOTE: Prior to upgrading, check the *SDA Status Overview Report* and verify that the current maintenance status is valid and not expired. You can find the report under **Audit Log > Reports**.

Installation instructions

You can update the appliance using an advertised update or by manually uploading an update file.

Prepare for the update

Before you update the KACE Systems Deployment Appliance, verify that your appliance meets the following requirements:

- **Current version:** The minimum version required for installing the KACE Systems Deployment Appliance 9.0 is the latest 8.2 version. To check the version number of your appliance, log in to the KACE Systems

Deployment Appliance, then click the About Appliance icon. If your appliance is running an earlier version, you must update to the listed version before proceeding with the 9.0 installation.

- **Disk space:** The KACE Systems Deployment Appliance must have more than 20 percent free disk space available.

Additional recommendations:

- **Allow plenty of time:** If you have a large database, more than 150 MB in size, the update process can take several hours.
- **Back up before you start:** Export all items on your appliance using the instructions provided in the following Knowledge Base articles:
 - [KACE Systems Deployment Appliance Backup Best Practices](#)
 - [How to back up a KACE Systems Deployment Appliance](#)
- **Enable SSH:** Enable SSH in the *Security Settings* section of the KACE Systems Deployment Appliance Administrator Console.
- **Reboot the KACE Systems Deployment Appliance server:** On the *Appliance Maintenance Settings* page, reboot the KACE Systems Deployment Appliance server prior to updating.

Update the appliance using an advertised update

You can update the appliance using an update that is advertised on the appliance *Dashboard* page or on the *Appliance Maintenance* page of the Administrator Console.

CAUTION: Never manually reboot the appliance during an update.

1. Export all items on your KACE Systems Deployment Appliance using the instructions provided in the following Knowledge Base articles:
 - [KACE Systems Deployment Appliance Backup Best Practices](#)
 - [How to back up a KACE Systems Deployment Appliance](#)
2. On the left navigation bar, click **Settings** to expand the menu, then click **Appliance Maintenance**, to display the *Appliance Maintenance* page. Scroll to the bottom of the page and click **Reboot**. Click **Yes** in the *Confirmation* dialog to restart the server.
3. On the left navigation bar, click **Settings** to expand the menu, then click **Appliance Maintenance** to display the *Appliance Maintenance* page.
4. Click **Apply Update** to initiate the upgrade process.

The time required to update the appliance varies depending on the content present on the KACE Systems Deployment Appliance, do not manually hard shut down the appliance. Also, the appliance reboots automatically (potentially several times) during the upgrade process until it is complete.

5. Click **Check for Server updates**.

The appliance reboots automatically when the upgrade is complete.

Upload and apply an update manually

If you have an update file from Quest KACE, you can upload that file manually to update the appliance.

CAUTION: Never manually reboot the appliance during an update.

1. Export all items on your KACE Systems Deployment Appliance using the instructions provided in the following Knowledge Base articles:
 - [KACE Systems Deployment Appliance Backup Best Practices](#)
 - [How to back up a KACE Systems Deployment Appliance](#)
2. Using your customer login credentials, log in to the Quest website at <https://support.quest.com/kace-systems-deployment-appliance/download-new-releases>, download the KACE Systems Deployment Appliance Server 9.0 Update, and save the file locally.
3. Log in to the Administrator Console.
4. On the left navigation bar, click **Settings** to expand the section, then click **Appliance Maintenance** to display the *Appliance Maintenance* page.
5. Under *KACE SDA Updates > Manual Updates*, click **Browse** to select the update file, then click **Open**.
6. Click **Update Server**.

The time required to update the appliance varies depending on the content present on the KACE Systems Deployment Appliance, do not manually hard shut down the appliance. Also, the appliance reboots automatically (potentially several times) during the upgrade process until it is complete.

More resources

Additional information is available from the following:

- Online product documentation (<https://support.quest.com/technical-documents>)
 - **Technical specifications:** Information on the minimum requirements for installing or upgrading to the latest version of the product: <http://support.quest.com/technical-documents/kace-systems-deployment-appliance/9.0-common-documents/technical-specifications-for-virtual-appliances/>
 - **Administrator guide:** Instructions for setting up and using the appliance. Go to <http://support.quest.com/technical-documents/kace-systems-deployment-appliance/9.0-common-documents/administrator-guide/> to view documentation for the latest release.

Globalization

This section contains information about installing and operating this product in non-English configurations, such as those needed by customers outside of North America. This section does not replace the materials about supported platforms and configurations found elsewhere in the product documentation.

This release supports any single-byte or multi-byte character set. In this release, all product components should be configured to use the same or compatible character encodings and should be installed to use the same locale and regional options. This release is targeted to support operations in the following regions: North America, Western Europe and Latin America, Central and Eastern Europe, Far-East Asia, Japan.

The release is localized to the following languages: French, German, Japanese, Portuguese (Brazil), Spanish.

About us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than

130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.

Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product.
