# Foglight and SAML 2.0 Integration in ADFS

Starting with release 5.9.3, Foglight® Management Server supports Active Directory Federation Services (ADFS) 2.0 and PingFederate 8.x (and later) using the Security Assertion Markup Language (SAML) 2.0 protocol. Follow the below steps in sequence to completely integrate SAML SSO with the Foglight Management Server on the ADFS sever.

**i** **NOTE:** ADFS requires https protocol, so Foglight's http SAML login cannot be used on ADFS. Foglight https SAML login could be using either IP address or the host name. For detailed configurations about IP or host name logon, see Before you begin, step 8 & 9 in the Step 1: Adding Relying Party Trust in ADFS section, and step 3 in the Step 3: Configuring Endpoints section.

- Before you begin
- Step 1: Adding Relying Party Trust in ADFS
- Step 2: Editing Claim Rules
- Step 3: Configuring Endpoints
- Step 4: Configuring Signature and Hash Algorithm
- Step 5: Exporting the Certificate
- Step 6: Configuring the Trust Relationship
- Step 7: Setting up SAML in Foglight

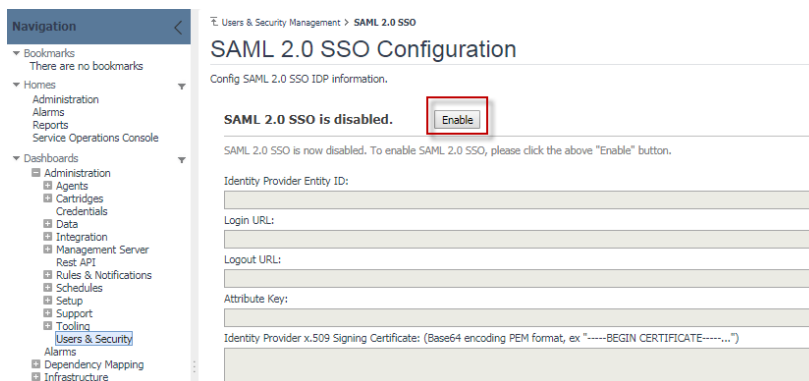

# Before you begin

## NOTE:

- If you are about to use SAML IP login, make sure to run the following command:  
`"-Dquest.saml.hostname=<foglight-server-ip>"` to start up your Foglight Management Server.
- When logging into your Foglight Management Server, make sure to keep using the same approach as what you configured during the SAML integrations. For example, if you set up the HTTPS SAML login using the IP address, you must log in to your Management Server with `https://<foglight-server-ip>:<foglight-server-port>`.

You need to enable SAML 2.0 SSO Configuration in your Foglight Management Server prior to setting up the SAML integration. Follow the steps below to enable SAML 2.0 SSO Configuration:

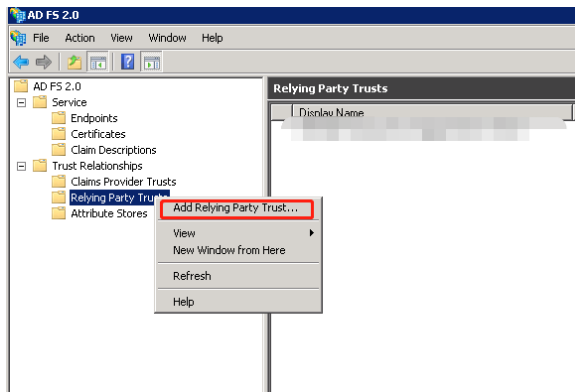

- 1 Log into the Foglight Management Server as the Administrator.
- 2 Under **Dashboards**, click **Administration > Users & Security**, and then click **SAML 2.0 Integration Settings**. The *SAML 2.0 SSO Configuration* dashboard appears.
- 3 Click **Enable**.

## Step 1: Adding Relying Party Trust in ADFS

To add Relying Party Trust:

- 1 Open the ADFS Management Console.
- 2 Navigate to **Trust Relationships > Relying Party Trusts**. Right click **Relying Party Trusts**, and then select **Add Relying Party Trust...** from the context menu.

3 Click **Start** on the *Add Relying Party Trust Wizard*.

4 *Select Data Source*: Select **Enter data about the relying party manually** and click **Next**.

5 *Specify Display Name*: Specify a display name and click **Next**.

6 *Choose Profile*: Select **AD FS 2.0** and click **Next**.

7 *Configure Certificate*: Click **Next**.

8 *Configure URL*: Select **Enable support for the SAML 2.0 WebSSO protocol**, and then input Foglight's SAML 2.0 metadata URL in https, which is:

**i NOTE:** ADFS requires https protocol, so Foglight's http SAML login cannot be used on ADFS.

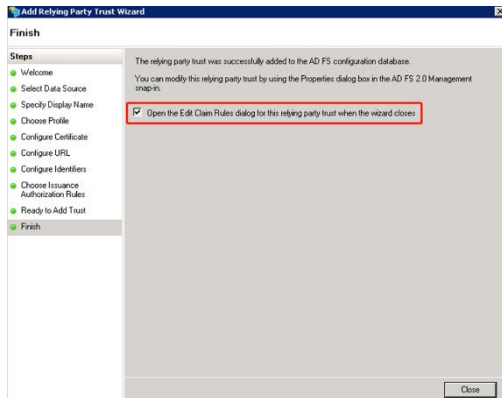

- IP login: <https://<foglight-server-ip>:<foglight-ssl-port>/console/saml2/metadata.xml>. Click **Next**.
- Host name login: <https://<foglight-server-host-name>:<foglight-ssl-port>/console/saml2/metadata.xml>. Click **Next**.

- 9 *Configure Identifiers*: Input Foglight's SAML 2.0 metadata https URL used in step 8 in the **Relying party trust identifier** field, click **Add**, and then click **Next**.

- 10 *Choose Issuance Authorization Rules*: Select **Permit all users to access this relying party** and click **Next**.

11 *Ready to Add Trust*: Click **Next**.

12 *Finish*: Make sure to select **Open the Edit Claim Rules dialog for this relying party trust when the wizard closes**, and then click **Close**.

## Step 2: Editing Claim Rules

To edit Claim Rules:

1 On the prompted **Edit Claim Rules** dialog box, click **Add Rule...**

2 *Choose Rule Type*: Select **Send LDAP Attributes as Claims** and click **Next**.

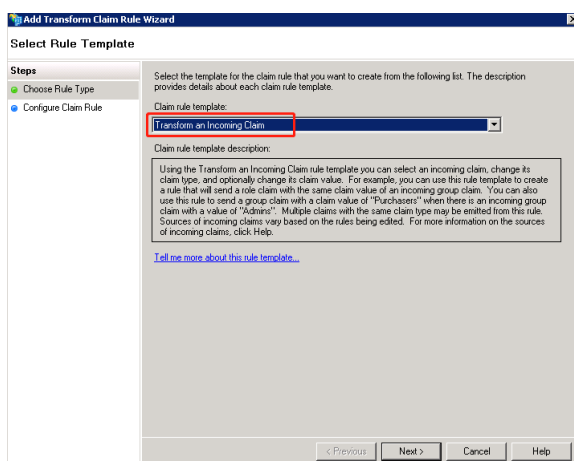

- 3 *Configure Claim Rule:* Specify a rule name, and select **Active Directory** as the **Attribute store**. Add LDAP attributes mapping as below, and then click **Finish**.

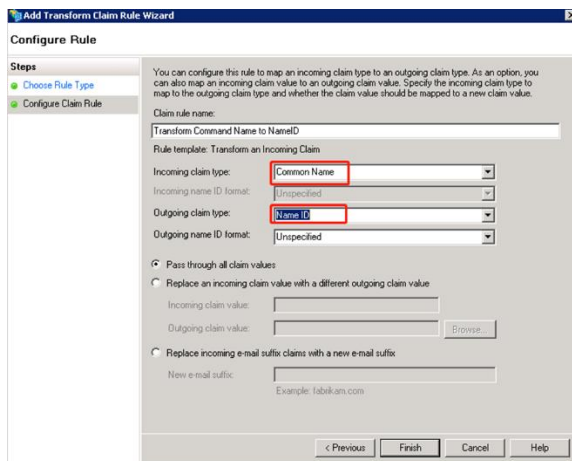

- 4 Click **Add Rule...** button again to add another rule on the **Edit Claim Rules** wizard.

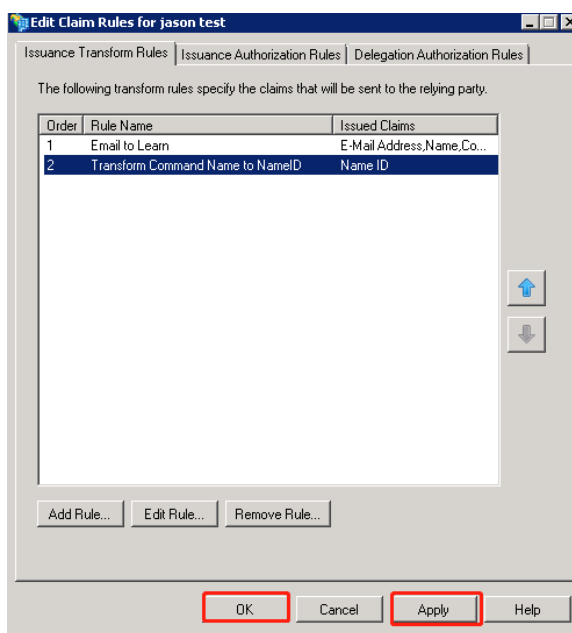

- 5 *Choose Rule Type:* Select **Transform an Incoming Claim** and click **Next**.

- 6 *Configure Claim Rule:* Specify a rule name and configure it as below, and then click **Finish**.

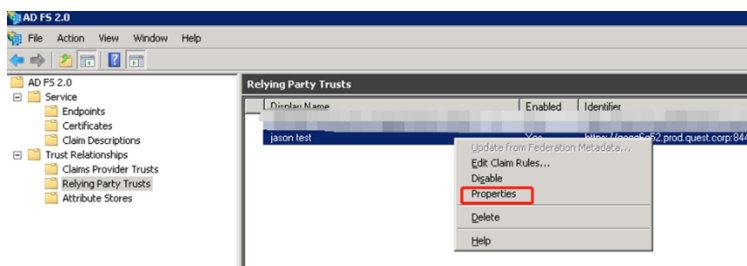

- Click **Apply** to apply the configuration then click **OK** to close the **Edit Claim Rules** wizard.

## Step 3: Configuring Endpoints

To configure endpoints:

- Right click the Relying party Trusts item that you added above, and then click **Properties**.

- Select **Endpoints** on the **Properties** wizard, and then click **Add**.

3 You need add two Endpoints, including SAML Assertion Consumer endpoint and SAML Logout endpoint.

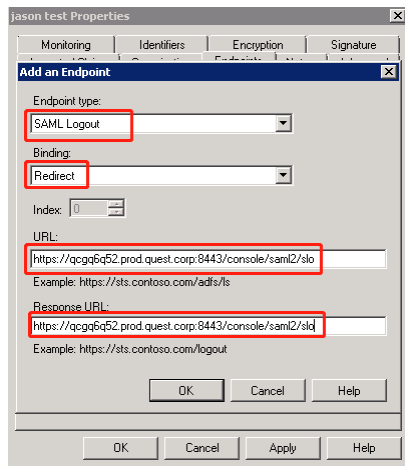

- a For the URL field of SAML Assertion Consumer endpoint, the value is:
- IP logon: [https://<foglight-server-ip>:<foglight-ssl-port>/console/saml2/saml\\_assertion\\_consumer](https://<foglight-server-ip>:<foglight-ssl-port>/console/saml2/saml_assertion_consumer)
  - Host name logon: [https://<foglight-server-host-name>:<foglight-ssl-port>/console/saml2/saml\\_assertion\\_consumer](https://<foglight-server-host-name>:<foglight-ssl-port>/console/saml2/saml_assertion_consumer)

Configure the other fields as below, and then click **OK** when you finish.

- b Both the URL and Response URL fields of SAML Logout endpoint are:
- IP logon: <https://<foglight-server-ip>:<foglight-ssl-port>/console/saml2/slo>
  - Host name logon: <https://<foglight-server-host-name>:<foglight-ssl-port>/console/saml2/slo>

Configure the other fields as below, and then click **OK** when you finish.

- c Select the default **SAML Assertion Consumer Endpoint** which index is 0, and then click **Remove** to delete it.

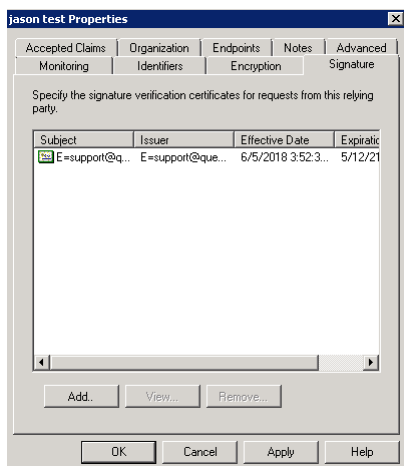

## Step 4: Configuring Signature and Hash Algorithm

To configure Signature and Hash algorithm:

- 1 Select **Signature** on the **Properties** wizard, and then click **Add**.

- 2 Add a Foglight server's signature file. You can get a default one from *<foglight-server-directory>/config/sam\_certificate.pem* or you can generate your own signature file.

- 3 After adding the signature file, select **Advanced** and choose **SHA-1** option for the **Secure hash algorithm** field, and then click **Apply**.

- 4 Click **OK** to finish the Properties configuration.

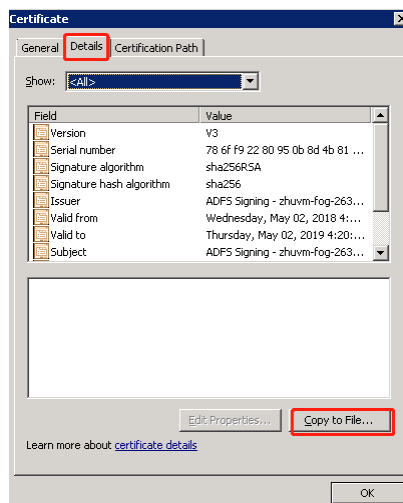

# Step 5: Exporting the Certificate

To export the certificate:

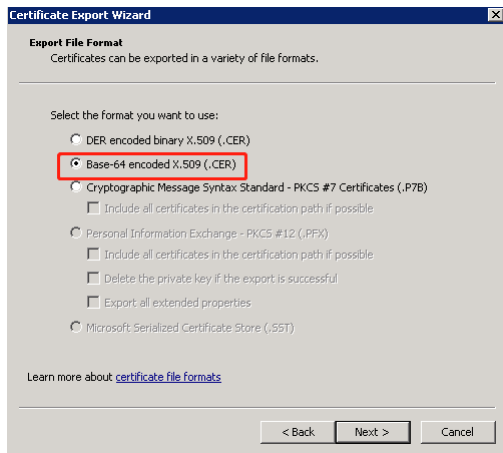

- 1 Navigate to **Service > Certificates** on the ADFS Management Console, right click the **Token-signing** item, and then click **View Certificate...**

- 2 Select **Details** on the pop-up **Certificate** wizard and click **Copy to File...** to export the certificate which will be used in the following Foglight SAML setup.

- 3 Select **Base-64 encoded X.509 (.CER)** format as the export file type.

## Step 6: Configuring the Trust Relationship

To configure the trust relationship:

- 1 On the ADFS server machine, run PowerShell as administrator.
- 2 Run the following command to load the ADFS PowerShell module.  
*Add-PSSnapin Microsoft.Adfs.PowerShell*
- 3 Run the following two commands to set up the trust relationship. You need to change the *<relying-party-trust-display-name>* to the **Display Name** of the Relying Party Trust that you have added in Step 1: Adding Relying Party Trust in ADFS.
  - *Set-ADFSRelyingPartyTrust -TargetName <relying-party-trust-display-name> -SigningCertificateRevocationCheck None*
  - *Set-ADFSRelyingPartyTrust -TargetName <relying-party-trust-display-name> -EncryptionCertificateRevocationCheck None*

## Step 7: Setting up SAML in Foglight

To set up SAML in the Foglight Management Server:

- 1 Log into the Foglight Management Server as an administrator.
- 2 Under **Dashboards**, click **Administration > Setup > SAML 2.0 SSO**. The *SAML 2.0 SSO Configuration* dashboard appears.
- 3 Click **Edit Settings** and configure the SAML settings as below.

- a *Identity Provider Entity ID*: The value should be [https://<ADFS\\_SERVER>/federationmetadata/2007-06/federationmetadata](https://<ADFS_SERVER>/federationmetadata/2007-06/federationmetadata).
- b *Login URL*: The value should be [https://<ADFS\\_SERVER>/adfs/ls/](https://<ADFS_SERVER>/adfs/ls/).
- c *Logout URL*: The value should be [https://<ADFS\\_SERVER>/adfs/ls/](https://<ADFS_SERVER>/adfs/ls/).
- d *Attribute Key*: It depends on the identity key selected to identify the user. For example it can be <http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name>.
- e *Identity Provider x.509 Signing Certificate*: copy the content of the certificate file which you have exported in Step 5: Exporting the Certificate.

### SAML 2.0 SSO Configuration

Config SAML 2.0 SSO IDP information.

**SAML 2.0 SSO is enabled.**

SAML 2.0 SSO is now enabled. IDP information can be edited as below.

Identity Provider Entity ID:

Login URL:

Logout URL:

Attribute Key:

Identity Provider x.509 Signing Certificate: (Base64 encoding PEM format, ex "-----BEGIN CERTIFICATE-----")

- 4 Click **Apply Configuration** to save the configuration.

Then configurations of integrating SAML 2.0 SSO with the Foglight Management Server in ADFS are completed.

## We are more than just a name

We are on a quest to make your information technology work harder for you. That is why we build community-driven software solutions that help you spend less time on IT administration and more time on business innovation. We help you modernize your data center, get you to the cloud quicker and provide the expertise, security and accessibility you need to grow your data-driven business. Combined with Quest's invitation to the global community to be a part of its innovation, and our firm commitment to ensuring customer satisfaction, we continue to deliver solutions that have a real impact on our customers today and leave a legacy we are proud of. We are challenging the status quo by transforming into a new software company. And as your partner, we work tirelessly to make sure your information technology is designed for you and by you. This is our mission, and we are in this together. Welcome to a new Quest. You are invited to Join the Innovation™.

## Our brand, our vision. Together.

Our logo reflects our story: innovation, community and support. An important part of this story begins with the letter Q. It is a perfect circle, representing our commitment to technological precision and strength. The space in the Q itself symbolizes our need to add the missing piece – you – to the community, to the new Quest.

## Contacting Quest

For sales or other inquiries, visit [www.quest.com/contact](http://www.quest.com/contact).

## Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- [Submit and manage a Service Request](#)
- [View Knowledge Base articles](#)
- [Sign up for product notifications](#)
- [Download software and technical documentation](#)
- [View how-to-videos](#)
- [Engage in community discussions](#)
- [Chat with support engineers online](#)
- [View services to assist you with your product.](#)
