Quest® StoragePoint

Updated July 2024
Version 6.4.0

Contents

1

EMCECS Adapter Configuration

This section will provide you details on how to configure a storage endpoint's connection string to utilize the EMCECS Adapter, which is standard with StoragePoint. Please refer to the StoragePoint Reference Guide for information on managing Storage Endpoints.

For more information on the EMCECS implementation, see the EMC [documentation](#).

On the Application Management page, click *Storage and Backup Endpoints*.

Click *Create New Endpoint* or click the name of an existing storage endpoint that you want to edit.
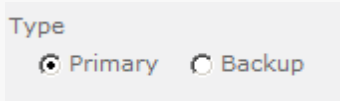

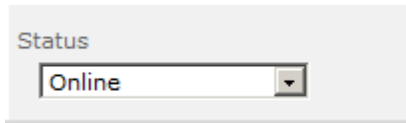

Click the *Show* link next to the Advanced Adapter Settings to see the additional fields.

Storage Settings

Please provide storage device settings in this section.

Adapter

EMCECS

Adapter Settings

☐ Show Connection String

Use SSL

No

Port

80

Verify Hash

No

EMCECS Adapter Connection String Parameters

Setting Value/Options
Name Enter the unique name of the Storage or Backup Endpoint.
Type Type ⦿ Primary   ○ Backup *Primary* – this endpoint will be available for externalization when creating storage profiles. *Backup* – this endpoint will be in the Backup Services dropdown on the profile page. The selection is locked down when saving. See Backup Services Settings in the Reference Guide for more information on how Backup Endpoints are used.
Status Status Online ▾ *Online* – Storage Endpoint should be available to associate to a Storage Profile and accept BLOBs. (default) *Offline (Read Only)* – A storage endpoint can be configured, but not made available for externalizing content. The BLOBs already on the endpoint are still read only.
Adapter EMCECS ▾ ❓ Select the adapter for the endpoint that is being created.
Adapter Settings EMCECSAtmos EMCECSS3 After selecting the Adapter EMCECS, an additional dropdown selection must be made to designate if Atmos or S3 protocol will be used for the endpoint configuration.

Setting
Value/Options

UID

ATMOS: The username to use when connecting to the server. This is equivalent to the Token ID provided with your Atmos online account.

Key

ATMOS: The base64 encoded shared secret to use when signing requests to the server.

Advanced Adapter Settings *(Hide)*
Base URI

`accesspoint.emccis.com`

ATMOS: IP address or host name that represents the Atmos instance or specific node to be used. Default = accesspoint.emccis.com.

Root

ATMOS: The starting folder/container within your Atmos namespace under which all folders and files will be created.

Use SSL
No

ATMOS: (*yes/no*) Determines whether or not the adapter negotiates an SSL connection for all data (and metadata) transfers. Default = No.

Port
enter a port number (optional)

ATMOS: The port on the server to communicate with. Default = 80 (443 if UseSSL is Yes).

Verify Hash
No

ATMOS: (*yes/no*) Includes a check-sum operation after each blob transfer. Allows the adapter to detect and log data integrity errors immediately. Default = No.

Setting	Value/Options

Setting Value/Options

EMCECSAtmos
EMCECSS3

S3 Options

ℹ NOTE: The EMCECS adapter can be used with the Dell ECS device, using the EMCECSS3 Adapter Settings.

Access Key

enter an account Access Key

S3: The Access Key ID provided when you signed up for the S3 service. Required.

Secret Key

enter an account Secret Key

S3: The Secret Access Key provided when you signed up for the S3 service. Required.

Bucket Name

enter an account Bucket name

(Lowercase letters and "DNS Friendly" naming highly recommended.)

S3: The container within your S3 account where content associated with a storage profile will be stored. Bucket names are case sensitive and unique across the entire S3 service namespace.

Advanced Adapter Settings *(Hide)*
Use SSL
True ▾

S3: (*true/false*) Determines whether or not the adapter negotiates an SSL connection for all data (and metadata) transfers. Default = True.

Proxy URI

enter simple proxy for communication (optional)

S3: Used to take the URL (optionally including a port) of a simple non-authenticating proxy that will be used when communicating with EMCECS services.

Setting
Value/Options

S3 Host

specifies explicitly the Host to use (optional)

IP or DNS name that represents the access point for the Amazon AWS service.

i | NOTE: If a Fully Qualified Domain Name (FQDN) is used in "S3 Host", the IP address which points to the primary DELL EMC ECS storage node needs to be associated with a bucket; either via DNS record or via local OS "hosts" file:

<primary DELL EMC ECS storage node> <bucket name>.<FQDN>

It is also required to provide a new "Base URL" containing an FQDN (example below):

S3 Port Number

enter port number (optional)

Port used to access the S3 service. Default = 9020 for http and 9021 for https.

Strict SSL

No ∨

(*Yes/No*) If *UseSSL* is *Yes*, the *StrictSSL* flag controls whether or not the use of "self-issued" or otherwise suspicious certificates on the system will be tolerated.

Setting	
Value/Options	
Region Enter Region Name. Used in AWS4 request signing, this is an optional property; change it only if the region cannot be determined from the service endpoint. For custom or private clouds or where StoragePoint cannot automatically retrieve the region because of security or permission reasons.

Click the *Show Connection String* checkbox to edit the connection string. Otherwise, fill in the connection fields shown for the adapter selected. Notice that the connection string parameters are name/value pairs separated by semi-colons.

i | NOTE: Adapter parameters are not case-sensitive.

i | NOTE: You should always use a passphrase when generating encryption keys. The passphrase gives you a means of re-creating keys should they become unrecoverable or corrupt. It is very important to remember or record the passphrase outside of StoragePoint. Otherwise, encrypted content could become irretrievable in the event of a database failure.

If you choose to externalize content you should test the storage profile settings by clicking the *Test Storage Settings* button. A message under the button will indicate whether or not the test was successful. If the test fails the message will include the error that was the root cause of the failure.

> **i** NOTE: When testing access to an endpoint from within Central Administration, the Identity of the Application Pool hosting the Central Administration Site is the one that is being used for the test. If there are different Identities used for other Web Applications in the Farm then those identities will also need access but cannot be tested from within Central Admin itself. See BLOB Store Security and StoragePoint Required Privileges in the StoragePoint Reference Guide.

Appendix: Troubleshooting

Problem: Receiving errors on storage or retrieval of externalized content.

Wherever possible, StoragePoint surfaces error messages returned by the adapter either directly to the user or within the SharePoint ULS logs. You should refer to your storage platform/provider documentation for resolution to errors logged by the adapter.

About Us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.

Contacting Quest

For sales or other inquiries, visit www.quest.com/contact.

Technical Support Resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at https://support.quest.com

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request

- View Knowledge Base articles

- Sign up for product notifications

- Download software and technical documentation

- View how-to-videos

- Engage in community discussions

- Chat with support engineers online

- View services to assist you with your product
