

Password Manager

Release Notes

Version 5.14.5

22 July 2025, 11:45

These release notes provide information about the Password Manager 5.14.5 release. For the most recent documents and product information, see [Password Manager Technical Documents](#) on the One Identity Support Portal.

Password Manager 5.14.5 is a patch release, containing security enhancements and resolved issues.

- For the list of enhancements, see [Enhancements](#).
- For the list of resolved issues, see [Resolved issues](#).
- For the list of known issues, see [Known issues](#).

Enhancements

The following is a list of enhancements implemented in Password Manager 5.14.5.

Table 1: General Password Manager enhancements

Enhancement	Issue ID
Password Manager files are now signed with One Identity LLC as the name of the signer instead of Quest Software Inc.	488796
To reduce a possible attack surface, the Help icon of the Password Manager Self-Service Site now no longer appears if you open the site via Secure Password Extension.	481460

Table 2: Password Manager Service enhancements

Enhancement	Issue ID
Enhanced Password Manager scheduled tasks so that every time when they are invoked to run, they now check if they are enabled to run in addition to the scheduler.	496448
Updated the Duo secondary provider of Secure Token Server (STS) to support the latest configuration that is required by Duo.	495973

Resolved issues

The following is a list of issues addressed in Password Manager 5.14.5.

Table 3: Resolved issues – General Password Manager issues

Resolved issue	Issue ID
Previously, Organizational Units (OUs) with a special character in their distinguished name could not be added to user or helpdesk scopes. This issue is now fixed, so OUs with special characters in their distinguished name can now be used as containers for users in scopes.	501806
Previously, unlocking a user account that was included in an OU with a special character in its distinguished name could result in an error. This issue is now fixed, so unlocking these user accounts is now possible.	501663
Previously, if an error occurred while running a management task, the task would run again an hour later and result in the same error. This issue was fixed by making sure that management tasks get disabled when an error occurs.	501348
Previously, the Maximum Password Age Policy scheduled task set the pwdLastSet attribute to 0 for users in the scope of the password policy, even if their passwords were set never to expire (that is, the Password Policies > One Identity password policies > Policy Rules > Password Age Rule > Maximum password age setting was disabled). This issue has now been resolved. While the Maximum Password Age Policy task is running, it ignores policy rules where the Maximum password age setting is disabled.	493464
Previously, the Maximum Password Age Policy scheduled task might have behaved unexpectedly in certain policy configurations, resulting in setting the User must change password at next logon flag to True. This issue is now fixed.	493463

Resolved issue	Issue ID
<p>Previously, if Password Manager has been configured to use LDAPS and the certificate set did not contain the domain controller (DC) IP address in the certificates subject alternative name, then authentication might fail over LDAPS, and certain features could not function.</p> <p>This issue has been fixed by making sure that the DC name is used for the LDAPS connection.</p>	472898
<p>Fixed certain use cases when using IPv6 could cause connection issues to LDAP systems.</p>	470049
<p>Fixed the Authenticate with Password activity so that it now selects the domain controllers to communicate with based on the domain connection settings.</p>	468420

Table 4: Resolved issues – Password Manager Administration Site

Resolved issue	Issue ID
<p>Previously, the Stop button did not immediately stop the operation when starting the Unregister Users, Bulk Force Password Reset, or FIDO2 Key Management tasks.</p> <p>Now, the Stop button immediately ends the process.</p>	501971
<p>Previously, on the Password Manager Administration Site, the Management menu > Bulk Password Reset feature showed an incorrect text on the Stop button, if a bulk password reset operation was in progress.</p> <p>This issue was fixed so that the Stop button now shows the correct text.</p>	501677
<p>Previously, users were not able to start management tasks manually.</p> <p>This issue has been fixed, so management tasks can now run as before.</p>	500966
<p>Fixed various potential security vulnerabilities in the Password Manager Administration Site.</p>	495915, 495911
<p>The #WORKFLOW_NAME# variable now appears correctly in emails sent by workflows.</p>	466966
<p>In the Q&A Policy page, translated questions are now editable even if translations are disabled for users.</p>	452685
<p>Previously, email notification activities did not use the default email template message set in General Settings > Email Template, even if the Email user if workflow succeeds > Use from general settings section setting has been selected.</p> <p>This issue is now fixed, so email notification activities can now use the default email template, and any changes made in that template will be reflected in the email notification message.</p>	290414

Table 5: Resolved issues – Password Manager Self-Service API

Resolved issue	Issue ID
Removed all unnecessary parameters from the CustomWebService endpoint of the Self-Service API (PMSelfServiceAPI).	462748

Table 6: Resolved issues – Password Manager Self-Service Site

Resolved issue	Issue ID
Fixed the Search / OK button so that it now works as intended with the possible CAPTCHA and reCAPTCHA configurations.	462845

Table 7: Resolved issues – Password Manager Secure Password Extension

Resolved issue	Issue ID
Fixed a potential security vulnerability in Secure Password Extension.	496206, 480594

Known issues

The following is a list of issues, including those attributed to third-party products, known to exist at the time of release.

Table 8: Known issues

Known issue	Issue ID
When User Principal Name (UPN) is used as service account, installing a Password Manager hotfix can lock the service account. Workaround To solve the problem: <ol style="list-style-type: none"> 1. Change the service account to the domainname\username format. 2. Provide a password for the same service account user. 3. Install the Password Manager hotfix. 	255614
Following a Password Manager upgrade, the General > Settings > Scheduled Tasks > Active Directory Sites task is disabled. Workaround After upgrading Password Manager to a newer version, enable the Active Directory Sites task manually.	246147
When scheduled from the secondary instance of the Password Manager	233679

Known issue	Issue ID
server, the General Settings > Unregister Users task does not run.	
Workaround	
Schedule the Unregister Users task on the primary instance of Password Manager.	
If the application pool identity is a domain user with minimal permissions, then Web interface customization changes are not applied to the Self-Service and Helpdesk Sites.	233658
In the General Settings > Instance Reinitialization page, the Corporate phone attribute is not imported from the primary instance to the secondary instance.	229200
Workaround	
Update the Corporate phone attribute manually on the secondary instance to have the same value as on the primary Password Manager instance.	
If the Password Manager Self-Service Site contains an IPv6 address, the location-sensitive authentication (LSA) feature does not work.	221571
Workaround	
LSA currently supports IPv4 addresses only. Therefore, do not access the Password Manager Self-Service Site from an external network where the request contains an IPV6 address.	
When configuring a dictionary rule in the Password Manager Administration Site, the Policy Rules > Dictionary Rule > Enable dictionary lookup to reject passwords that contain > Beginning characters of a dictionary word setting does not work correctly if you specify only 2 beginning characters.	221468
Workaround	
One Identity recommends using the A complete word from the dictionary (QPMDictionary.txt) setting when configuring a dictionary rule.	
If no appropriate authentication methods are configured for it, the Forgot My Password screen may appear blank in the Password Manager Self-Service Site or Helpdesk Site.	221389
Workaround	
In the Password Manager Administration Site, One Identity recommends configuring the Register workflow with Security Questions as one of its registration modes.	
When a symmetry rule is configured with the Policy Rules > Symmetry Rule setting of the Password Manager Administration Site, it may fail to	220177

Known issue	Issue ID
validate passwords containing non-consecutive characters.	
Workaround	
Do not use the Policy Rules > Symmetry Rule > Maximum number of consecutive characters within a password, that read the same in both directions (pass4554word) setting.	
In a Password Manager for AD LDS environment, if the User Scope is configured with an AD LDS account, the Forgot My Password and Manage My Passwords workflows will fail.	220171
Workaround	
When configuring a User Scope, do not use The following AD LDS account setting of the Access account > Edit AD LDS Instance Connection dialog.	
When a Questions and Answers Policy is updated with any language other than English, users may receive both the default and the custom email notifications on the Password Manager Self-Service Site.	219401
Workaround	
For the Email user if workflow succeeds workflow, change the value of the Select email template to use setting to Customize .	
Upgrading Password Manager from version 5.6.3 to 5.9.x keeps the previous My Questions and Answers profile workflow.	215892
Workaround	
To solve the problem:	
<ol style="list-style-type: none"> 1. In the Password Manager Administration Site, navigate to the My Questions and Answers profile workflow. 2. Open Workflow Settings > Availability. 3. Set Enable the workflow to Never. 4. Select Show the workflow on the Self-Service Site. 5. To apply your changes, click OK. 	
The User Status Statistics scheduled task may fail intermittently.	171590
After upgrading to Password Manager 5.9.x, the My Notifications custom workflow cannot be edited in the Password Manager Self-Service Site.	171589
Workaround	
One Identity recommends to use the Self-Service Site to edit the My Notifications workflow.	
When using Password Manager for AD LDS, the Password Policies page of the Administration Site is not updated when a password policy is created.	170587

Known issue	Issue ID
Workaround	
After a new Password Policy is created, click Save , and immediately cancel the Add New Policy wizard. The page will refresh and list the new policy.	
After upgrading to Password Manager for AD LDS 5.9.x, the General Settings > Search and Logon Options menu may display an error when its settings are modified.	170560
Workaround	
To solve this problem:	
<ol style="list-style-type: none"> 1. In the Password Manager for AD LDS Helpdesk Site, navigate to General Settings > Search and Logon Options. 2. In the Users must enter the following user account attribute for identification setting, change the value from <code>sAMAccountName</code> to <code>cn</code>. 	
In Password Manager for AD LDS, certain column data required for custom activities are not available in generated reports.	170355
After upgrading Password Manager from an earlier version to 5.9.x, the upgrade process may create duplicate URL references for the Password Manager User Site.	169921
Workaround	
Manually delete URL shortcuts that are not required.	
When a Password Manager for AD LDS instance and the Password Manager for AD LDS server instance are not configured on the same machine, Password Policy Rules are not displayed in the Password Manager for AD LDS Self-Service Site.	169763
Workaround	
Configure the Password Manager for AD LDS instance and the Password Manager for AD LDS server instance on the same machine.	
The user search settings of the Password Manager for AD LDS Helpdesk Site may work incorrectly.	169384
Workaround	
To solve the problem:	
<ol style="list-style-type: none"> 1. In the Password Manager for AD LDS Helpdesk Site, navigate to General Settings > Search and Logon Options. 2. Use the <code>cn</code> attribute instead of <code>mail</code> to search for users. 	
The Password Manager Self-Service Site may not launch on Secure Password Extension (SPE) through a 32-bit operating system.	167871

Known issue	Issue ID
-------------	----------

Workaround

If you have a 32-bit operating system, One Identity recommends to use the Self-Service Site.

When a password is changed from the target Active Directory (AD) system to that of the source AD, One Identity Quick Connect may be unable to synchronize passwords.	167573
--	--------

Workaround

Restart the Quick Connect Capture Agent Service on all the source and target systems.

In Password Manager versions 5.8.2 and 5.9.x, you can only reconnect to a domain on the second attempt.	166950
---	--------

Workaround

To solve the problem:

1. In the Password Manager Administration Site, select the User Scope, Helpdesk Scope or Password Policy you want to configure.
2. Click **Add domain connection** twice to add a new domain connection.

In email notifications, the #OPERATOR_ACCOUNT_NAME#, #OPERATOR_IP#, #WORKFLOW_RESULT#, and #WORKFLOW_SUMMARY# parameters are not populated.	141728
---	--------

On Windows Server 2019, the Password Manager Service and One Identity rSMS Service may stop.	127587
--	--------

Workaround

To solve the problem, make sure that the domain controller machine and the clients are at two separate entities.

When editing a dictionary file between the size of 10–20 MB from a Password Policy, the web browser session may crash, and an error may appear in the Windows Event Viewer.	115957
---	--------

Workaround

If you must modify a dictionary file larger than 10 MB, edit it from the domain machine where Password Policy Manager (PPM) is installed.

When performing a password reset with the Password Manager Helpdesk Site, the site also accepts the previous/old password.	114822
--	--------

Workaround

Manually enter a different password during the short duration of the password reset.

System requirements

Before installing Password Manager 5.14.5, ensure that your system meets the following minimum hardware and software requirements.

NOTE: When setting up a virtual environment, carefully consider the configuration aspects such as CPU, memory availability, I/O subsystem, and network infrastructure to ensure the virtual layer has the necessary resources available. For more information about environment virtualization, see [One Identity's Product Support Policies](#).

Password Manager Service and Administration Site requirements

Before installing Password Manager, ensure your system meets the following minimum hardware and software requirements. These requirements are applicable both to Full Installation and Distributed Installation (when the Self-Service Site and the Helpdesk Site are installed on separate systems).

Table 9: Password Manager Service and Administration Site requirements

Requirement	Details
Platform	1.6 GHz or higher.
Memory	At least 4 GB RAM.
Hard disk space	2.7 GB of free disk space.
	NOTE: If .NET Framework is already installed, then installation may require less disk space.
Operating system	Password Manager can be run on any of the following operating systems: <ul style="list-style-type: none">• Microsoft Windows Server 2016• Microsoft Windows Server 2019• Microsoft Windows Server 2022
	NOTE: Consider the following operating system and machine restrictions: <ul style="list-style-type: none">• Password Manager is not supported on Windows Server Core mode setup.• One Identity does not recommend installing Password Manager on the machine where the Domain Controller (DC) server is installed.

Requirement	Details
Internet Information Services	<ul style="list-style-type: none"> • Password Manager supports Windows Server 2016 and later versions in domain and forest functional levels, including domains operating in a mixed mode. • Password Manager does not support Windows Server 2012 R2 and earlier versions.
	<p>Password Manager requires any of the following Microsoft Internet Information Services (IIS) versions on the web server of your environment:</p> <ul style="list-style-type: none"> • IIS 8.0 • IIS 10.0
	<p>NOTE: PMSelfService site requires IIS 10.</p>
	<p>TIP: To ensure best practice security, configure Password Manager to use HTTPS. For more information, see Enabling HTTPS in the <i>Password Manager 5.14.5 Administrator Guide</i> or <i>Password Manager 5.14.5 Administrator Guide (AD LDS Edition)</i> documents.</p>
Web browser	<p>Password Manager supports the following web browsers:</p> <ul style="list-style-type: none"> • Microsoft Edge • Mozilla Firefox • Apple Safari • Google Chrome
Microsoft .NET Framework	<p>Microsoft .NET Framework 4.7.2</p>
	<p>NOTE: Install .NET Framework before you install Password Manager.</p>
Visual C++ Runtime Libraries	<p>Password Manager supports the following Visual C++ Runtime Libraries:</p> <ul style="list-style-type: none"> • Visual C++ Runtime Libraries 2017 • Visual C++ Runtime Libraries 2010
	<p>Visual C++ Runtime Libraries x86 and x64 are included in the Password Manager distribution package.</p>
	<p>NOTE: Install Visual C++ Runtime Libraries 2010 and Visual C++ Runtime Libraries 2017 before you install Password Manager.</p>

Requirement	Details
-------------	---------

Minimum screen resolution	1280x1024 pixels
---------------------------	------------------

Password Manager Self-Service Site requirements

Make sure that every client computer meets the following minimum software requirements:

Table 10: Password Manager Self-Service Site requirements

Requirement	Details
-------------	---------

Web browser	The Password Manager Self-Service Site supports the following browsers: <ul style="list-style-type: none">• Microsoft Edge• Mozilla Firefox• Apple Safari• Google Chrome
-------------	---

Mobile web browser	The Password Manager Self-Service Site supports the following mobile browsers: <ul style="list-style-type: none">• Microsoft Edge• Mozilla Firefox• Apple Safari• Google Chrome• DuckDuckGo• Samsung Internet
--------------------	--

Minimum screen resolution	1280x1024 pixels
---------------------------	------------------

Password Manager Helpdesk requirements

Make sure that every client computer meets the following minimum software requirements:

Table 11: Password Manager Helpdesk Site requirements

Requirement	Details
-------------	---------

Web browser	The Password Manager Helpdesk Site supports the following browsers: <ul style="list-style-type: none">• Microsoft Edge
-------------	--

Requirement	Details
	<ul style="list-style-type: none"> • Mozilla Firefox • Apple Safari • Google Chrome
Minimum screen resolution	1280x1024 pixels

Password Policy Manager requirements

To implement password policies in an Active Directory (AD) domain managed by Password Manager, deploy the Password Policy Manager component on all domain controllers of the managed domain.

The domain controllers where you plan to install the Password Policy Manager component must meet the following requirements:

Table 12: Password Policy Manager requirements

Requirement	Details
Hard disk space	30 MB of free hard disk space.
Operating system	Password Policy Manager supports the following operating systems: <ul style="list-style-type: none"> • Microsoft Windows Server 2016 • Microsoft Windows Server 2019 • Microsoft Windows Server 2022

NOTE: Password Manager does not support Windows Server Core mode setup.

Secure Password Extension requirements

To support password resets from the Windows login screen, you must deploy Secure Password Extension on all target computers in the managed domain. The target computers must meet the following minimum software requirements:

Table 13: Secure Password Extension requirements

Requirement	Details
Operating system	Secure Password Extension supports the following operating systems: <ul style="list-style-type: none"> • Microsoft Windows 10 • Microsoft Windows 11

Offline Password Reset requirements

To allow users to reset their forgotten passwords when they are not connected to the corporate network (making their domain unavailable), deploy the Offline Password Reset component on all target computers in the managed domain.

NOTE: Users can reset their passwords offline only if the Offline Password Reset component has been already installed prior to their scheduled password reset time.

The target computers must meet the following minimum software requirements:

Table 14: Offline Password Reset requirements

Requirement	Details
Operating system	The Offline Password Reset component supports the following operating systems: <ul style="list-style-type: none">• Microsoft Windows 10• Microsoft Windows 11

NOTE: Password Manager does not support Windows Server Core mode setup.

Password Manager Reports requirements

To configure and use Password Manager reports, you must:

1. Install an SQL Server in your environment.
2. Configure reporting settings on the Password Manager Administration Site. For more information, see [Reporting](#) in the *Password Manager 5.14.5 Administration Guide* or *Password Manager 5.14.5 Administration Guide (AD LDS Edition)* documents.

The report definitions included with Password Manager support all features of the SQL Server versions listed in this section. All supported Microsoft SQL Server Reporting Services in Password Manager support SSL connection.

Table 15: Password Manager Reports requirements

Requirement	Details
SQL Server	The following SQL Server versions are supported: <ul style="list-style-type: none">• Microsoft SQL Server 2016• Microsoft SQL Server 2017• Microsoft SQL Server 2019• Microsoft SQL Server 2022

Accessing external URLs

To enable Password Manager to download images, the machine where Password Manager is installed must have an active Internet access.

Product licensing

Password Manager requires a license key for operation. For more information on license management, see *Licensing* in the *Password Manager 5.14.5 Administration Guide* or the *Password Manager 5.14.5 Administration Guide (AD LDS Edition)* documents.

Upgrade and installation instructions

For more information on how to install or upgrade Password Manager, see the following resources:

- When you upgrade Password Manager from versions prior 5.11.3 and Secure Token Server features are used, create a backup of **Rsts.exe.config** in <password-manager-install-folder>\Service\SecureTokenServer. When the upgrade is finished, restore these files.

This procedure is not required for upgrades starting from version 5.12.3.

- If in any of the workflows in the **Authentication Methods** activity is used with the **Personal Email: Authenticate with Passcode** method, administrators must reconfigure this activity.
- For more information on the upgrade procedure, see *Upgrading Password Manager* in the *Password Manager 5.14.5 Administration Guide* or the *Password Manager 5.14.5 Administration Guide (AD LDS Edition)* documents.

You can upgrade to Password Manager 5.14.5 from version 5.9.x or later.

- For more information on how to install and configure Password Manager, see *Installing Password Manager* in the *Password Manager 5.14.5 Administration Guide*, *Password Manager 5.14.5 Administration Guide (AD LDS Edition)*, or the *Password Manager 5.14.5 Quick Start Guide* documents.

Globalization

This section contains information about installing and operating this product in non-English configurations, such as those needed by customers outside of North America. This section does not replace the materials about supported platforms and configurations found elsewhere in the product documentation.

This release is Unicode-enabled and supports any character set. It supports simultaneous operation with multilingual data. This release is targeted to support operations in the following regions: North America, Western Europe and Latin America, Central and Eastern Europe, Far-East Asia, Japan.

The release is localized to the following languages: Chinese (Simplified), Chinese (Traditional), Czech, Danish, Dutch, French, German, Italian, Japanese, Korean, Polish, Portuguese (Brazil), Portuguese (Portugal), Russian, Spanish, Swedish.

The Password Manager Self-Service Site is not localized in any language other than English.

About us

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales and other inquiries, such as licensing, support, and renewals, visit <https://www.oneidentity.com/company/contact-us.aspx>.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at <https://support.oneidentity.com/>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product

Third-party contributions
