Introduction

Managing information system security is a priority for every organization. In fact, the level of security provided by software vendors has become a differentiating factor for IT purchase decisions. Quest strives to meet standards designed to provide its customers with their desired level of security as it relates to privacy, confidentiality, integrity, and availability.

This document describes the security features of On Demand Migration for SharePoint. This includes access control, protection of customer data, secure network communication, and cryptographic standards.

About On Demand Migration for SharePoint

Use On Demand Migration for SharePoint to migrate Microsoft SharePoint site collections, and the sites, lists, list items, document libraries, and documents contained in the site collections, between Office 365 tenancies.

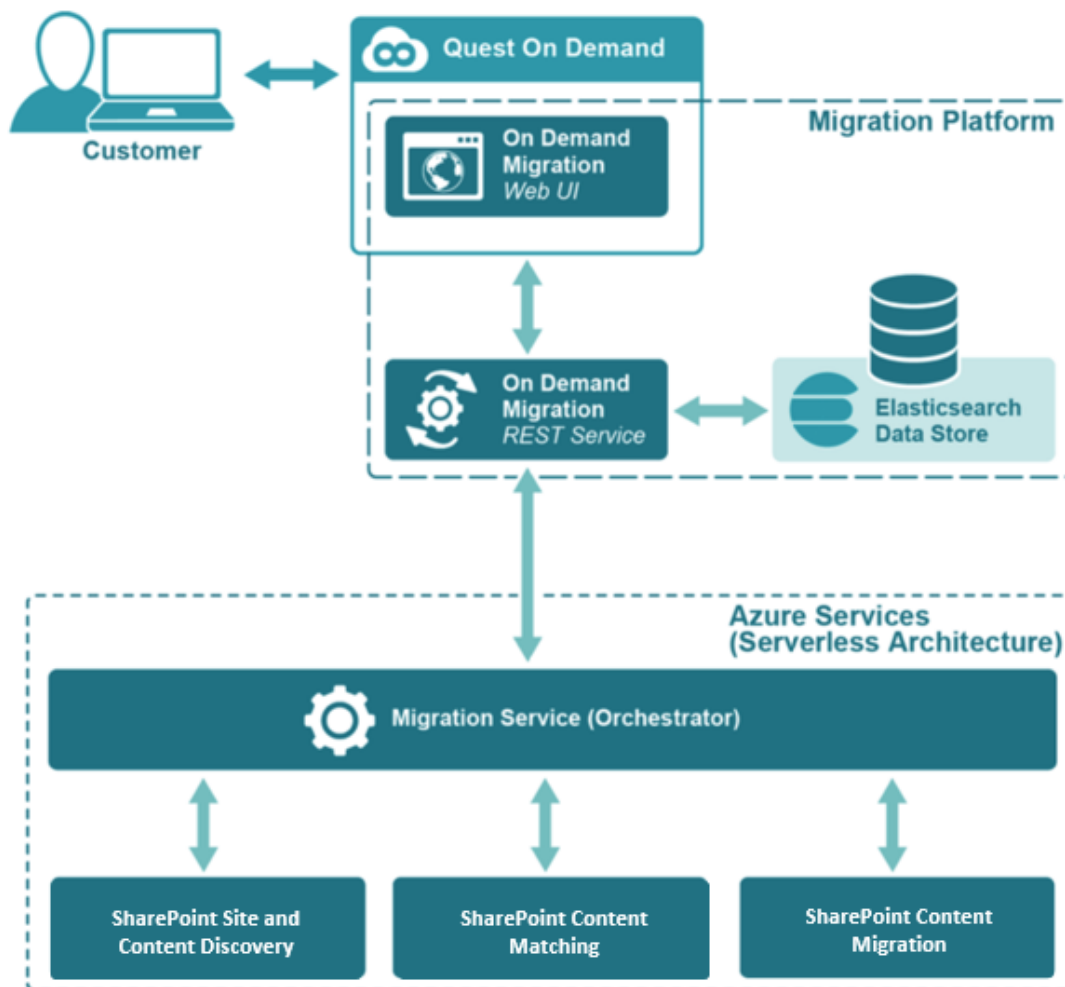

Most of these services are delivered via Microsoft Azure cloud services.

AI-powered Migration Assistant

On Demand Migration includes an AI-powered Migration Assistant service that uses AI to analyze and summarize issues encountered during migration tasks, providing suggested solution. This service is optional and requires the operator to initiate the analysis. The AI Migration Assistant service is available in all modules in the On Demand Migration suite.

Architecture overview

The following schema shows the key components of the On Demand Migration for SharePoint architecture.

Authentication and Consents

Authentication is required when you log on to On Demand. Authorization is the consent required to create and access an On Demand organization.

Authentication of users

User access to On Demand Migration for SharePoint is authenticated with Microsoft Entra ID. Authenticating with Microsoft Entra ID offers inherent granular control and enables centralized configuration management. This method permits the configuration of advanced security layers using your own conditional access policies, including Multi-Factor Authentication (MFA), integration with Okta Inc., and other applications compatible with the Microsoft Authentication Library (MSAL).

The process of registering a SharePoint Office 365 tenant into On Demand Migration for SharePoint is managed through the standard Azure Admin Consent workflow.

A Microsoft Entra ID access token (constrained to the Quest On Demand application) is obtained when the user navigates through the authentication process. This Microsoft Entra ID access token has a lifetime limit of 10 minutes after which it is automatically refreshed if the user is actively using the application. The user is automatically logged out following a period of inactivity. If the user token is revoked in Microsoft Entra ID, the user will continue to have access to On Demand until the token expires after 10 minutes. User access to the On Demand organization can be also revoked within On Demand by an On Demand Organization Administrator, resulting in access loss after token expiry.

Quest On Demand Application Consent

As part of the login process with Microsoft Entra ID, users must consent to the set of minimal permissions required by the Quest On Demand application. By default, all users are allowed to consent to applications for permissions that do not require administrator consent. This behavior might be deactivated in some Microsoft Entra ID tenants and may require tenant administrators to enable user consent flow for the Quest On Demand application.

The base consents required by Quest On Demand is shown below.

admin1@xclouddev.onmicrosoft.com

Permissions requested

This app would like to:

^ View your basic profile

Allows the app to see your basic profile (e.g., name, picture, user name, email address)

This is a permission requested to access your data in xclouddev.

^ Maintain access to data you have given it access to

Allows the app to see and update the data you gave it access to, even when you are not currently using the app. This does not give the app any additional permissions.

This is a permission requested to access your data in xclouddev.

Consent on behalf of your organization

Accepting these permissions means that you allow this app to use your data as specified in their [terms of service](#) and [privacy statement](#). You can change these permissions at <https://myapps.microsoft.com>. [Show details](#)

Does this app look suspicious? [Report it here](#)

Cancel

Accept

NOTE:

- The ability to consent on behalf of your organization is available if logging in as the global administrator in the tenant.
- The ability to request consents will only be available if the global administrator has enabled the admin consent workflow. For more details see the article [How to enable the admin consent workflow](#).
- The verified publisher domain and permissions will be clearly labeled and detailed.

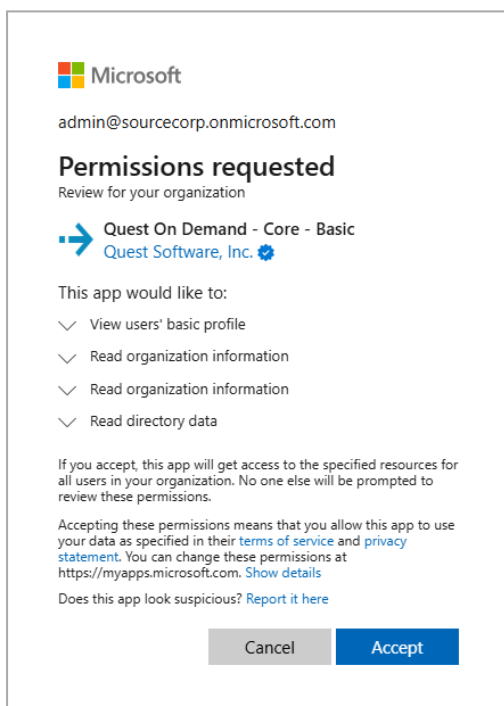

Administrator Consent and Service Principals

On Demand Migration requires access to the customer's Microsoft Entra ID and Office 365 tenancies. The customer grants that access using the Microsoft Admin Consent process, which will create a Service Principal in the customer's Microsoft Entra ID with minimum consents required by On Demand Migration for SharePoint. The Service Principal is created using Microsoft's OAuth certificate based [client credentials grant flow](#).

Customers can revoke Admin Consent at any time. For more details, see <https://learn.microsoft.com/en-us/entra/identity/enterprise-apps/delete-application-portal> and <https://docs.microsoft.com/en-us/skype-sdk/trusted-application-api/docs/tenantadminconsent>.

The base consents required by Quest On Demand and all associated online services for both source and target tenants is shown below.

Quest On Demand - Core - Basic

On Demand Migration

The base consent required by all On Demand Migration services is.

Quest On Demand - Migration - Basic - Minimal or **Quest On Demand - Migration - Basic - Full** consent for the source tenant.

Quest On Demand - Migration - Basic - Full consent for the target tenant.

The consents apps are as shown below:

Quest On Demand - Migration - Basic - Minimal

The screenshot shows a Microsoft consent screen for the source tenant. At the top, it displays the Microsoft logo and the email address admin@sourcecorp.onmicrosoft.com. The title is "Permissions requested" with the subtitle "Review for your organization". Below this, there is a blue arrow icon pointing to the app name "Quest On Demand - Migration - Basic - Minimal" and the developer "Quest Software Inc." with a verified badge. A section titled "This app would like to:" lists five permissions: "Manage Exchange As Application", "Read directory data", "Read all groups", "Read and write all directory RBAC settings", and "Sign in and read user profile". Below the permissions, there is a disclaimer: "If you accept, this app will get access to the specified resources for all users in your organization. No one else will be prompted to review these permissions." This is followed by a statement: "Accepting these permissions means that you allow this app to use your data as specified in their terms of service and privacy statement. You can change these permissions at https://myapps.microsoft.com. Show details". At the bottom, there is a question "Does this app look suspicious? Report it here" and two buttons: "Cancel" and "Accept".

Quest On Demand - Migration - Basic - Full

The screenshot shows a Microsoft consent screen for the target tenant. At the top, it displays the Microsoft logo and the email address admin@targetcorp.onmicrosoft.com. The title is "Permissions requested" with the subtitle "Review for your organization". Below this, there is a blue arrow icon pointing to the app name "Quest On Demand - Migration - Basic - Full" and the developer "Quest Software Inc." with a verified badge. A section titled "This app would like to:" lists five permissions: "Manage Exchange As Application", "Read and write directory data", "Read and write all groups", "Read and write all directory RBAC settings", and "Sign in and read user profile". Below the permissions, there is a disclaimer: "If you accept, this app will get access to the specified resources for all users in your organization. No one else will be prompted to review these permissions." This is followed by a statement: "Accepting these permissions means that you allow this app to use your data as specified in their terms of service and privacy statement. You can change these permissions at https://myapps.microsoft.com. Show details". At the bottom, there is a question "Does this app look suspicious? Report it here" and two buttons: "Cancel" and "Accept".

On Demand Migration for SharePoint

In addition to the base consents required by On Demand Migration, On Demand Migration for SharePoint requires the following consents:

Quest On Demand - Migration - SharePoint - Minimal or **Quest On Demand - Migration - SharePoint - Full** consent for the source tenant.

Quest On Demand - Migration - SharePoint - Full consent for the target tenant.

The consent apps are as shown below:

Quest On Demand - Migration - SharePoint - Minimal

Quest On Demand - Migration - SharePoint - Full

The screenshot shows a Microsoft consent dialog for the application 'Quest On Demand - Migration - SharePoint - Minimal' by Quest Software Inc. The user is identified as admin@sourcecorp.onmicrosoft.com. The dialog lists the following permissions requested: Read files in all site collections, Read directory data, Read all term store data, Sign in and read user profile, Have full control of all site collections, Read items in all site collections, and Read managed metadata. At the bottom, there are 'Cancel' and 'Accept' buttons.

The screenshot shows a Microsoft consent dialog for the application 'Quest On Demand - Migration - SharePoint - Full' by Quest Software Inc. The user is identified as admin@sourcecorp.onmicrosoft.com. The dialog lists the following permissions requested: Have full control of all site collections, Read items in all site collections, Read and write managed metadata, Read files in all site collections, Read directory data, Read all term store data, and Sign in and read user profile. At the bottom, there are 'Cancel' and 'Accept' buttons.

Role based access control

Quest On Demand is configured with default roles that cannot be edited or deleted, and allows you to add custom roles to make permissions more granular. Each access control role has a specific set of permissions that determines what tasks a user assigned to the role can perform. For more information about role-based access control, see the [Quest On Demand Migration User Guide](#).

Azure datacenter security

Microsoft Azure datacenters have the highest possible physical security and are considered among the most secure and well protected datacenters in the world. They are subject to regular audits and certifications including Service Organization Controls (SOC) 1, SOC 2 and ISO/IEC 27001:2005.

Relevant references with additional information about the Windows Azure datacenter security can be found here:

Overview of data managed by On Demand Migration for SharePoint

On Demand Migration for SharePoint accesses customer SharePoint data (content) from the source tenancy and writes the data to a SharePoint site on the target tenancy.

- Metadata that defines the SharePoint site structure and properties is temporarily stored in memory and deleted when the migration is completed.
- Documents stored in the document libraries and lists of the SharePoint site are temporarily stored in Azure blob storage for the duration of the migration. The storage container is deleted when the migration is complete.
- Manifest files and associated migration log files may be retained by the application for troubleshooting purposes. Manifest files contain data to identify the list items and documents. The troubleshooting data is stored in a separate storage account. Troubleshooting data is automatically deleted after 30 days.
- The application does not require or store any passwords.

AI-powered Migration Assistant

On Demand Migration uses Artificial Intelligence to generate summary reports from event logs produced during migration tasks. This feature is optional and requires the operator to initiate the analysis.

- All data stays within your On Demand Region and reports are only available to view in the On Demand organization where they were generated.
- AI generated reports are removed when the associated object or task are deleted by the user or when the parent project or organisation is deleted.
- Data is consumed by AI only when you request a report be generated.
- Data is used only to generate the summary report and will never be used for AI training.
- AI does not have access to privileged accounts or application consents and is not provided with the rights to perform any migration activities. All user-initiated AI activities are recorded for auditing purposes via the Activity Trail module in On Demand.

Location of customer data

When a customer signs up for On Demand, they select the region in which to run their On Demand organization. All computation is performed, and all data is stored in the selected region. The currently supported regions can be found here: <https://regions.quest-on-demand.com/>.

Windows Azure Storage, including the Blobs, Tables, and Queues storage structures, are replicated three times in the same datacenter for resiliency against hardware failure. The data is replicated across different fault domains to increase availability. All replication datacenters reside within the geographic boundaries of the selected region.

See this Microsoft reference for more details: <https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy>

Privacy and protection of customer data

The most sensitive customer data processed by On Demand Migration for SharePoint is the SharePoint content including documents and their associated metadata.

- While the migration task is running, SharePoint documents, list items, and associated metadata, are temporarily stored in Azure Blob containers. When the migration task is complete, this data is deleted.
- All migration project data and logs are encrypted at rest.

To ensure that customer data is kept separate during processing, the following policies are strictly applied in On Demand Migration for SharePoint:

- All temporarily artifacts created for each customer during migration is stored in separate Azure storage containers and will be saved for a maximum of 30 days for troubleshooting use. Temporary artifacts such as migration logs may contain metadata of objects, but never their content.
- This information is protected through the Azure built-in data-at-rest server-side encryption mechanism. It uses the strongest FIPS 140-2 approved block cipher available, Advanced Encryption Standard (AES) algorithm, with a 256-bit key.
- A separate Elasticsearch server instance is used for each customer.

More information about Azure queues, tables, and blobs:

- <https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blobs-introduction>
- <https://docs.microsoft.com/en-us/azure/security/security-storage-overview>
- <https://docs.microsoft.com/en-us/azure/storage/common/storage-service-encryption>

Separation of customer data

A common concern related to cloud-based services is the prevention of commingling of data that belongs to different customers. On Demand Migration for SharePoint has architected its solution to specifically prevent such data commingling by logically separating customer data stores.

Customer data are differentiated using a Customer Organization Identifier. The Customer Organization Identifier is a unique identifier obtained from the Quest On Demand Core that is created when the customer signs up with the application.

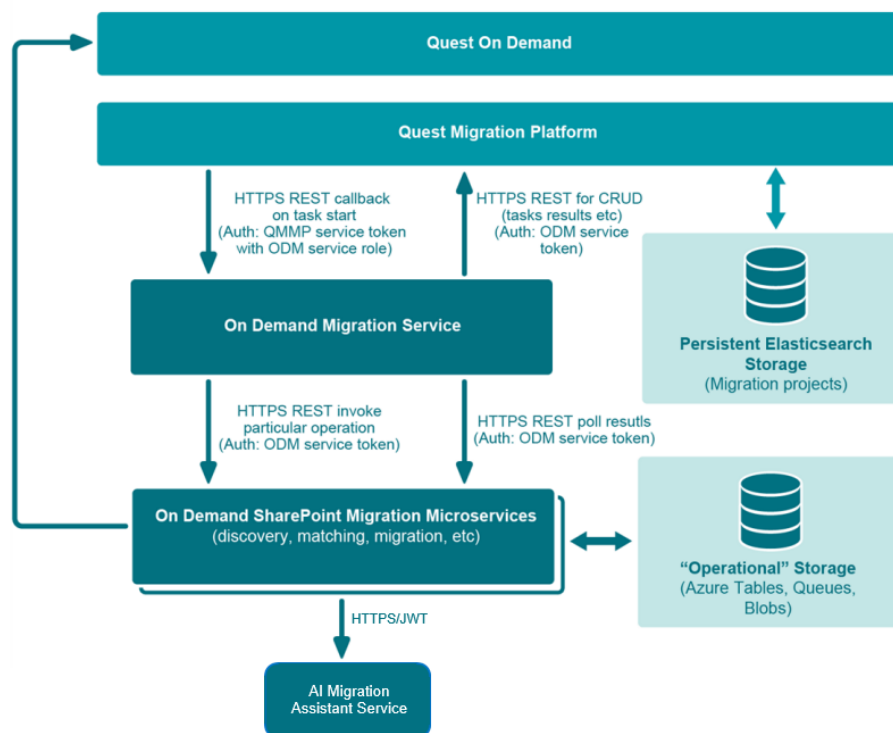

This identifier is used throughout the solution to ensure strict data separation of customers' data in Elasticsearch storage and during processing. A separate Elasticsearch server instance is used for each customer.

Network communications

Internal network communication within Azure includes:

- Inter-service communication between On Demand Migration for SharePoint components, On Demand Core and the On Demand Platform
- Communication to customer Microsoft Entra ID tenants

The following scheme shows the communication configuration between key components of On Demand Migration for SharePoint.

The network communication is secured with HTTPS and is not visible to the external public internet.

Inter-service communication uses OAuth authentication using a Quest Microsoft Entra ID service account with the rights to access the services. No backend services of On Demand Migration for SharePoint can be used by end-users.

On Demand Services accepts the following network communication from outside Azure:

- Access to On Demand Migration web UI.

- PowerShell cmdlets to access the On Demand Migration for SharePoint backend. These PowerShell cmdlets are used internally by Quest Support in read-only mode to access customers' Quest On Demand organizations, migration projects, tasks, events, and object metadata for troubleshooting purposes only.

External network communication from outside Azure to On Demand Services include:

- On Demand Migration user interface access

All external communication is secured with HTTPS.

The On Demand Migration for SharePoint user interface uses OAuth authentication with JWT token issued to a logged in user.

PowerShell cmdlets used by Quest Support are using Microsoft Entra ID authentication to access the On Demand Migration for SharePoint service. The user of the PowerShell API should be a Quest Microsoft Entra ID member with the appropriate role assigned.

There are no unsecured HTTP calls within On Demand Migration for SharePoint.

FIPS 140-2 compliance

On Demand Migration for SharePoint cryptographic usage is based on Azure FIPS 140-2 compliant cryptographic functions. For more information, see: <https://docs.microsoft.com/en-us/azure/storage/blobs/security-recommendations>

SDLC and SDL

The On Demand team follows a strict Quality Assurance cycle.

- Access to source control and build systems is protected by domain security, meaning that only employees on Quest's corporate network have access to these systems. Therefore, should an On Demand developer leave the company, this individual will no longer be able to access On Demand systems.
- All code is versioned in source control.
- All product code is reviewed by another developer before check in.

In addition, the On Demand Development team follows a managed Security Development Lifecycle (SDL) which includes:

- MS-SDL best practices
- Threat modeling.
- OWASP guidelines.
- Automated static code analysis is performed on a regular basis.
- Automated vulnerability scanning is performed on a regular basis.
- Segregated Development, Pre-Production, and Production environments. Customer data is not used in Development and Pre-Production environments.

On Demand developers go through the same set of hiring processes and background checks as other Quest employees.

Third Party assessments and certifications

Penetration testing

On Demand has undergone a third party security assessment and penetration testing yearly since 2017. The assessment includes but is not limited to:

- Manual penetration testing.
- Static code analysis with Third Party tools to identify security flaws.

A summary of the results is available upon request.

Certification

On Demand is included in the scope of the Platform Management ISO/IEC 27001, 27701, 27017 and 27018 certification:

- ISO/IEC 27001:2022 Information technology — Security techniques — Information security management systems — Requirements: Certificate Number: 1156977-8, valid until 2028-07-27.
- ISO/IEC 27701:2019 Information security, cybersecurity and privacy protection — Privacy information management systems — Requirements and guidance: Certificate Number: 1156977-8, valid until 2028-07-27
- ISO/IEC 27017:2015 Information technology — Security techniques — Code of practice for information security controls based on ISO/IEC 27002 for cloud services: Certificate Number: 1156977-8, valid until 2028-07-27.
- ISO/IEC 27018:2019 Information technology — Security techniques — Code of practice for protection of personally identifiable information (PII) in public clouds acting as PII processors: Certificate Number: 1156977-8, valid until 2028-07-27.

Quest Software, Inc. has successfully completed a SOC 2 examination of its On Demand solution. The examination was performed by an independent CPA firm for the scope of service described below.

- Examination Scope: Quest On Demand Platform
- Selected SOC 2 Categories: Security
- Examination Type: Type 2
- Review Period: August 1, 2024, to July 31, 2025
- Service Auditor: Schellman & Company, LLC

Operational security

Source control and build systems can only be accessed by Quest employees on Quest's corporate network through domain security. If a developer or any other employee with access to On Demand Migration including On Demand Migration for SharePoint leaves the company, the individual immediately loses access to the systems.

All code is versioned in source control.

Access to data

Access to On Demand Migration for SharePoint data is restricted to:

- Quest Operations team members
- Quest Support team members working closely with On Demand Migration product issues. Support team members will have read-only access to customer's Quest On Demand organizations, projects, tasks, events, and object metadata for troubleshooting purposes only
- The On Demand Migration for SharePoint development team to provide support for the product

Access to On Demand Migration for SharePoint data is restricted through the dedicated Quest Microsoft Entra ID security groups. For different types of data (e.g., product logs, customer data, and sensitive data) different access levels and lists of allowed people are assigned.

Permissions required to configure and operate On Demand Migration for SharePoint

Quest Operations team members have access to the Quest's production Azure Subscription and monitor this as part of normal day to day operations. On Demand Migration for SharePoint developers have no access to Quest's production Azure subscription.

To access On Demand Migration for SharePoint, a customer representative opens the On Demand website and signs up for an On Demand account. The account is verified via email; thus a valid email address must be provided during registration.

An organization is automatically created once the new account is created.

Prerequisites:

Microsoft Entra ID Global Administrator must give the Admin Consent to provision On Demand Migration for SharePoint for the customer's Microsoft Entra ID with the following permissions:

Microsoft SharePoint Online

- Read and write directory data (Microsoft Graph)
- Read files in all site collections (Microsoft Graph)
- Read and write directory data (Microsoft Entra ID)

- Read and write items and lists in all site collections (Office 365 SharePoint Online)
- Read and write managed metadata (Office 365 SharePoint Online)
- Read and write user profiles (Office 365 SharePoint Online)
- Read and write items in all site collections (Office 365 SharePoint Online)
- Have full control of all site collections (Office 365 SharePoint Online)

[Microsoft Graph permissions reference - Microsoft Graph | Microsoft Docs](#)

Operational monitoring

On Demand Migration for SharePoint internal logging is available to Quest Operations and On Demand Migration for SharePoint development teams during the normal operation of the platform. Personally Identifiable Information (PII) data (e.g. mail item subject, OneDrive file names, error messages reporting user names or email addresses, etc.) can become a part of internal logging for troubleshooting purposes.

The recorded information includes date and time, actor, a description and customized fields of the event but no details about the content of the data migrated (emails title/body, attachments, SharePoint/Teams files/Channels content).

The On Demand solution leverages Azure App Insight to collect all environment and application specific logs, auditing of user activities, system, and system administration activities. The logs are encrypted at rest starting in Application Insight and Azure tables then written to WORM storage within Azure to prevent tampering.

A *customer only* log is used when an error occurs which contains the Title of the object migrated (e.g. mail item subject, OneDrive file names, error messages reporting user names or email addresses, etc.). This information is only visible to customers and can be used to ease Customer Support Request troubleshooting. This feature is optional and can be turned off completely by the customer but as a consequence only GUID/ID will be available to determine which migrated data faced the error and can thus make troubleshooting much harder.

Production incident response management

Quest Operations and Quest Support have procedures in place to monitor the health of the system and ensure any degradation of the service is promptly identified and resolved. On Demand Migration for SharePoint relies on Azure infrastructure and as such, is subject to the possible disruption of these services.

- Quest On Demand services status page is available at <https://status.quest-on-demand.com/>
- Azure services status page is available at <https://azure.microsoft.com/en-ca/status/>

Customer measures

On Demand Migration for SharePoint security features are only one part of a secure environment. Customers must implement their own security practices when proceeding with data handling. Special care needs to be given to protecting the credentials of the Microsoft Entra ID tenants global administrator accounts and Office 365 tenants global administrator accounts.

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit www.quest.com or follow Quest Software on [X \(formerly Twitter\)](#) and [LinkedIn](#).

Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
